THE LABOUR GAZETTE

PREPARED AND EDITED IN
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 26] JANUARY, 1926 [NUMBER 1

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

"Labour Gazette" completes twenty-five years

The twenty-sixth volume of the LABOUR GAZETTE commences with this issue. The Conciliation Act of 1900, which established the Department of Labour, provided that the Minister in charge of the new Department "shall issue at least once in every month a publication to be known as the LABOUR GAZETTE, which shall contain information regarding conditions of the labour market and kindred subjects." The work of the Department has been extended in many directions during the past twenty-five years, and this growth has been reflected in a gradual widening of the range of subjects dealt with in the GAZETTE. Moreover a new field of study has been opened during recent years in the development of labour legislation in the provinces and by the increasing activities of labour and industrial organizations. But the main purposes of this publication remain as they were stated in the introductory note in the first issue, September, 1900, as follows:—

"The GAZETTE will not be concerned with mere questions of opinion, nor will it be the medium for the expression of individual views. It is an official publication, and as such will seek to record only such statements of fact, and such collections of statistics, as are believed to be trustworthy. In the selection and publication of these, care will be taken to have the information as complete and impartial as possible, and so to arrange if that, while furnishing from month to month facts and figures of current interest, these may at intervals be classified and compiled in such a manner as to show, over periods of time, the trend and development of the subjects dealt with. The work thus undertaken will, it is hoped, establish a basis for the formation of sound opinions, and for the drawing of correct deductions, but these, in themselves, are tasks which lie beyond the scope and purpose of the GAZETTE, and are ends it will seek to serve, not to meet."

Monthly Summary

Further seasonal losses in employment, as reported by employers in industries other than agriculture and fishing, were noted at the beginning of December, 1925. The contractions however, were the smallest registered on that date since 1920, with the exception of 1922, and the situation was considerably better than on December 1, 1924. Reports received by the Dominion Bureau of Statistics from 5,869 employers in these industries showed that they were employing 782,903 persons on December 1, 16,169 persons having been released from employment during the month. The employment index number, with the numbers employed in the same industries in January, 1920 taken as the base of 100, stood at 95.3 on December 1, as compared with 97.1 on November 1, 1925, and with 87.2 on December 1, 1924. The Employment Service of Canada reported the usual decline in the volume of business transacted in November as compared with the previous month, but a marked increase is shown over the records of November, 1924, both in the numbers of vacancies notified and placements effected. At the beginning of December the percentage of unemployment among members of trade unions was 5.7 as compared with percentages of 5.1 at the beginning of November and with 9.7 at the beginning of December, 1924. This figure is based upon reports received from 1,632 labour organizations, with 147,853 members.

The average cost of a weekly family budget of twenty-nine staple foods was $11.56 at the beginning of December, as compared with $11.23 for November; $10.58 for December, 1924; $10.73 for December, 1923; $10.39 for December, 1922; $11 for December, 1921; $14.84 for December, 1920; $16.92 for June, 1920 (the peak); $13.65 for December, 1918; and $7.96 for December, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1913 as 100 advanced to 163.5 for December as compared with 161.1 for November; 160.9 for December, 1924; 153.5 for

December, 1923; 153.1 for December, 1922; 150.6 for December, 1921; 217.2 for December, 1920; 256.7 for May, 1920 (the peak); and 205.6 for December, 1918.

The time loss caused by industrial disputes in December was less than in the previous month, but greater than the loss in December, 1924. Seven disputes were in progress at some time during the month, involving 1,781 employees, and causing a loss in working time of 14,937 days. Corresponding figures for November were as follows:—ten disputes, 3,844 workpeople and 38,582 working days; and for December 1924, three disputes, 125 workpeople, and 1,865 working days.

Combines Investigation Act, 1923

The LABOUR GAZETTE for November (page 1053) contained an outline of the proceedings at the fall assizes in Vancouver before Mr. Justice D. A. McDonald in connection with the action (Rex v. Simington *et al*) brought on behalf of the Crown against certain firms and individuals engaged as jobbers and brokers in fruits and vegetables. The charges were based on a report of an investigation made into the business of certain dealers in fruits and vegetables in British Columbia under the authority of the Combines Investigation Act, 1923.

The trial of the accused was delayed on application by the defence for time to enable their counsel to inspect the documents connected with the case. As this postponement meant that the trial would have been interrupted by the Christmas vacation, the Court granted the request of counsel for the Crown for adjournment until January 18

Report of Nova Scotia Coal Commission

The report of the Royal Commission appointed by the Government of Nova Scotia last October to investigate the coal industry in the Province was made public on January 11. A reprint of this report will be issued shortly by the Department under separate cover. The circumstances which led to the appointment of the commission, and the progress of their investigation, have been noted in former issues.

Wages, hours of labour and Prices in Canada 1920-1925

Two supplements are included with this issue of the LABOUR GAZETTE. The first deals with Wages and Hours of Labour in Canada, 1920 to 1925, including the following classes of labour: (1) building, metal printing, electric railways, civic employment, longshoremen and carters in various cities, (2) mining, lumbering, electric power, telephone, and (3) factory labour in various industries. The second supplement deals with the movement of wholesale and retail prices and changes in the cost of living in Canada and various other countries during the same period.

The annual index to the LABOUR GAZETTE for 1925 is also published with this issue.

Programme of labour legislation in Quebec

The speech from the Throne at the opening of the Legislature of the Province of Quebec on January 7 stated that a new Workmen's Compensation Act would be submitted, aiming at "doing equal justice to both employers and their workmen." A measure is to be introduced to improve the laws concerning technical schools. Since the last session the Government has given effect to the report of the Civil Service Commission by a general revision of the salaries of Civil Servants. It has considerably increased these salaries in accordance with the promise which had been made to civil servants to improve their position, in addition to having already provided an excellent system of pensions and a group insurance, the premium on which is entirely paid by the State. The Revised Statutes of the Province came into effect on December 31, 1925.

8-hour day in garages in B. C.

The Board of Adjustment under the British Columbia Hours of Work Act, 1923, announced during December that after January 1, 1926, the provisions of the act would apply to public garages in the province. When the act became effective the 8-hour day was not enforced as far as garages were concerned, on January 1, 1925, owing to peculiar conditions existing in this business. The Board intimates that reasonable latitude will be given so long as no man is worked more than the statutory forty-eight hours in one week. The regulations under the Act require every employer to notify, by means of the posting of notices in conspicuous places in the works or other suitable place, or by such other method as may be approved by the regulations, the hours at which work begins and ends, and where work is carried on by shifts, the hours at which each shift begins and ends. These hours shall be so fixed that the duration of the work shall not exceed the limits prescribed by this Act. Every employer is further to notify in the same way such rest intervals accorded during the period of work as are not reckoned as part of the working hours.

Male Minimum Wage Act of B. C.

The text of the "Male Minimum Wage Act" enacted by the British Columbia Legislature at its late session is given on another page of this issue. As in the matter of eight hour day legislation, British Columbia is the first province of Canada to place upon its statute book a law providing for the establishment of minimum wage rates for men. The only previous Canadian legislation was contained in an amendment to the British Columbia Coal Mines Regulation Act in 1919, providing for the establishment of a Coal Mines Minimum Wage Board, but no such Board was ever established under the Act. The Alberta Factories Act also was amended in 1918 to provide that "no person shall be employed by any employer in any factory, shop, office or office building at a wage less than $1.50 per shift." With these exceptions, however, no minimum wage law applicable to men was in existence in Canada before the new act was passed in British Columbia.

Cost of living of working women in Quebec

The Minimum Wage Board of Quebec has been conducting inquiries in order to ascertain what it costs a working girl to live in different parts of the Province. When the Board was appointed last July under legislation enacted in 1919 (amended in 1925), Mr. Gustav Francq, the chairman, intimated that before fixing minimum rates for any class of female workers the Board would investigate the working of similar acts in other provinces and endeavour to secure for Quebec the benefits of experience elsewhere. Accordingly questionnaires enumerating the various items included in the weekly or monthly budget of a working woman were sent out to women's organizations. The form of the questionnaires resembles that of the standard budget of living expenses adopted by the Ontario Minimum Wage Board (LABOUR GAZETTE, October, 1925, page 976). It calls for information on the following points:—

Board and lodging, per week, estimated on the cost for two persons in one room. *Clothing,* footwear and repairs, shoes, rubbers, slippers, stockings, underwear, nightgowns, petticoats and bloomers, corsets, two or three, corset covers, kimona (two years), hats, suits, half cost, to wear two years, or skirt, one year, light coat, to wear two years, winter dresses, summer dresses, two or three, shirt waists, three, sweater, two years, aprons, handkershiefs, gloves, scarf, umbrella, to last two years; total expense for clothing. *Sundries:* Laundry, doctor, dentist, optician, car fare, reading matter, postage and stationery, recreation and amusement, church and charity, insurance (life and sickness), incidentals, including brush, comb, soap, tooth paste, talcum powder, lotion, shoe polish, pins, needles, thread, shoe laces, etc.; total expense for sundries.

The Board is inviting the co-operation of the working women themselves in supplying the required information, which is treated confidentially. It was intended further to hold round-table conferences at Montreal and Quebec in January. The budgets officially approved will serve as a basis for the future work of the Board and the actual wages paid in the several industries will be tested by these standards.

Semi-monthly payment of salaries

The Minister of Customs and Excise announced in December that arrangements had been made for the semi-monthly payment of the salaries of all employees of the outside service commencing with the month of February, 1926, which is the earliest possible date in view of the amount of clerical labour involved in providing for the change.

Representations had been made to the Minister by the Dominion Customs and Excise Officers' Association that semi-monthly payments would enable the lower-paid employees to avoid credit accounts, take advantage of bargain sales, secure cash discount, and have at all times some available cash. It is estimated that 5,000 customs officials throughout the Dominion will be affected by the decision.

Results of safety work in Ontario in 1925

The Workmen's Compensation Board of Ontario reports a reduction in the cost of compensation during 1925 as compared with 1924. This reduction is attributed in some measure to the attention given last year throughout the Province to accident prevention work. The Board notes with satisfaction that safety organizations are expecting to carry on a much more intensive campaign during the coming year and they are in hopes thereby to reduce the frequency, severity, and costs of accidents in all classes.

The workmen's compensation figures for the year 1925 show that the Ontario Board has awarded in total benefits during the year 1925, including medical aid, the sum of $5,565,-443.39 as compared with $6,122,820.34 during the year 1924. While the compensation awarded has been less the number of acci-

dents reported have been greater, as the total accidents reported during the year 1925 amounted to 60,012, as compared with 58,675 during 1924. While the number of accidents is greater, the number of fatal cases is considerably less, as there are only 345 fatal cases during the year 1925, while there were 402 during the year 1924.

Those payments have required an average of 646 cheques per day, as compared with 614, the average for 1924. The amount of mail handled per day is between 5,000 and 6,000 letters going in and out. The average number of claims per day is slightly over 200, taking the whole year through, and the average paid out each day is $18,500.

During the month of December a total of 4,483 accidents were reported to the Board in the industries in Schedule 1 of the Act, 20 of which were fatal cases, in Schedule 2 industries 402 were reported including 4 fatal cases; and 322 Crown, 4 of which were fatal, were reported during the month, making in all 5,207, of which 28 were fatal.

School training after working hours

The Toronto Board of Education, as noted in the LABOUR GAZETTE for last September, recently asked the provincial government to amend the Ontario Adolescent School Attendance Act so as to allow the required part time instruction to be given to adolescents after their working hours. The Canadian Council of Child Welfare has since declared itself as strongly opposed to such an amendment. They claim that the amendment would mean that "children under-privileged to the extent of being forced to seek a work permit would be further penalized by compulsory night attendance following a full day's work, such children coming from the home where conditions are sufficiently strained or necessitous to have forced the child out of school below the age which the Council believes his health and rights to citizenship demand. It cannot, therefore, but regard this motion as directly involving the efficacy of the act and as opposed to what a sound social policy demands as standards in this field."

Section 7 of the Adolescent School Attendance Act, which took effect on September 1, 1925 (LABOUR GAZETTE, August, 1925, page 755) requires adolescents between the ages of 16 and 18 years to attend part time courses of instruction unless they have reached certain standards of knowledge. In regard to younger children, section 5 of the act provides that "no adolescent between 14 and 16 years of age shall be employed by any person during the hours from 8 a.m. to 5 p.m. unless he holds a home permit or an employment certificate." Such certificates are granted (for permitted occupations) where the child's services are needed at home, or where they are needed "for the necessary maintenance of such adolescent or some person dependent upon him."

The Canadian Council of Child Welfare maintains that this piece of Ontario legislation is in the front rank in the field and state that they will fight to hold this position and to oppose a movement that would have a very injurious reaction throughout the Dominion.

Minimum wages in Manitoba

The *Manitoba Gazette* in its issue of December 9, announced that the Minimum Wage Board had amended the recent order governing beauty parlours and hairdressing establishments in the section which provided that "there shall be a probationary period of three months for all learners in this industry." The amendment adds to this section the following proviso:—

"Provided that any time spent by any such learner in taking a course of hair-dressing or beauty culture at any trade school or college shall be deducted from such probationary period."

Minimum wage principle rejected in Ohio

The report of the Minimum Wage Commission of the State of Ohio has lately reached the Department. This Commission was appointed by the State Legislature in 1923, in view of conflicting reports as to the operation of such laws in other States and countries. It consisted of three members of the Senate, and three members of the House of Representatives (the latter named by the Speaker). The Commission presented its report at the session of 1925-26, signed by five of the commissioners, the sixth member, an official of the United Mine Workers of America, having been prevented by sickness from taking any action when the report was ready for signature. The conclusions reached by the Commission were as follows:—

1. That the so-called mandatory minimum wage legislation is unconstitutional and, therefore, should not be enacted by the General Assembly.

2. That the non-mandatory law similar to that which is in operation in Massachusetts is of little effect because its provisions cannot be properly enforced, the only weapon of enforcement being public opinion.

3. That minimum wage legislation in other states has not brought about the remedial result which was sought, and has not been enforced in several of the states which have enacted it.

4. That such legislation would have a serious effect upon Ohio's industries and employees in competition with those of other states if the minimum wage were fixed at a point above the wages paid in other states.

5. That there is no necessity for enacting minimum wage legislation for the State of Ohio because women employees of this state are receiving wages equal to those paid in states where this law is in operation.

The report states that "the hearings of this Commission disclosed the further fact that in the cities investigated, employers generally by voluntary action are not only paying wages commensurate with the services that are being rendered but are continually working towards bettering the conditions of their employees and adding by indirect means to the compensation paid for the service rendered. For instance, we find that numerous employers have inaugurated a system of group insurance, have added to the compensation of employees by permitting them to participate in the profits of the business, are supplying employees with meals at cost, are supplying them with free medical service, vacations with pay, allowing them, in the case of retail stores, a reduction in the price of goods, furnished in the establishment and supplying numerous other comforts to make their employment more pleasant. In some instances, pension systems have been inaugurated insuring an income to the employee after a period of long service. The Commission finds the condition of women workers within the State of Ohio to be equal, or better than the states having what is purported to be effective minimum wage legislation. That there is no relation between morality and wages is the conclusion of those who are actively engaged in the work of enforcing Minimum Wage legislation in the States under consideration.

Widows' pensions now payable in Great Britain

The British Act providing for widows' orphans' and old age contributory pensions, the provisions of which were outlined in the LABOUR GAZETTE for June, 1925, took effect on January 4 in respect to pensions for widows and orphans. Generally speaking, every woman who was a widow on January 4, and who has a legitimate child or children under the age of fourteen years, will be entitled to claim a pension for herself and allowances in respect of her children, provided, however, that her husband at the date of his death was insured under the National Health Insurance Scheme, and that 104 contributions had been paid in respect of him. A woman who becomes a widow after January 4 is also entitled to a pension, and children's allowances. Where both father and mother are dead, and the father was insured at the date of his death, the guardians or foster-parents may be entitled to allowances in respect of the orphans. The allowance in this case is on a higher scale than if the mother is alive to take care of them. The pension is 10 shillings a week for the widow, with an allowance for children up to the age of 14 years at the rate of 5 shillings a week for the oldest child and 3 shillings each for the other children.

The government actuary anticipated that 174,000 widows would be entitled in England and Wales to pensions on January 4, and in Scotland 22,000. However, the number of claims actually received was considerably less, especially in England.

In a recent conference held in London on social insurance in relation to the work of the International Labour Organization (League of Nations), the Parliamentary secretary of the Minister of Health, referring to the state contribution to the scheme, stated that the capital value of the liability assumed by the Exechequer in respect of persons brought within the scheme at the outset was estimated at £746,000,000 after allowance was made for the savings to the Exchequer accruing from the earlier termination of health and employment benefits. It was estimated that the increased cost of the existing old age pensions scheme directly attributable to the Act would amount to £1,700,000 in 1926-27, and would grow steadily to £4,700,000 in 1935-36 The net Exchequer liability under the scheme for the year 1935-36 was estimated at £15,300,000. The receipts from contributions in that year were estimated to amount to £25,500,000, giving as the total cost of the scheme in 1935-36, £40,800,000, which would be the amount to be found by the Exchequer if the scheme had been on a non-contributory basis.

A new spirit in industry

The London *Times*, in a recent leading article, discerns a new spirit in industry which is seeking an opportunity to express itself in a definite form of industrial organization. "Whatever the machinery may be, it must be capable, even though cautiously at first, of satisfying the outlook which the reasonable, intelligent, and capable workman of to-day has upon the industry in which are bound up all his material interests. The late Lord Milner, in a wise

and discerning survey of the country's economic problems, anticipated a time when instead of capital hiring labour, labour should hire capital. He recognized that at a certain stage of industrial development the divorce of those actually engaged in productive work from the ownership and control of the materials and instruments of production became inevitable; but he would not admit that the divorce must necessarily be regarded as permanent. 'It is surely conceivable, as it is in every respect to be desired,' he said, 'that the people actually engaged in any industry should themselves be its capitalists, or, in so far as they need the assistance of external capital, should pay for the use of it, without becoming subject to the control of its possessors.' The false antagonism betwen capital and labour will disappear for ever when the organization of industry is such that it becomes apparent that industry is a combination of men employing capital, and that the living organization is the master, and capital as much its instrument as the machines that move according to its will."

Employee stock ownership and banks

The significance of employees' stock-sharing plans at the present stage of industrial development was explained by Professor William Z. Ripley, of Harvard University, in a recent address to the Academy of Political Science. (The July issue of the LABOUR GAZETTE contained a note on the subject, quoting the opinion of President Green of the American Federation of Labour). Professor Ripley notes that even before the war "corporations" had almost entirely supplanted the individual and partnership forms of business organization. A more recent development has been the acquiring of business control by the banks. "All kinds of private businesses are being bought up by banking houses; and new corporations are being substituted for the old, in order that the purchase price (and more) may be recovered by sale of shares to the general public. But the significant change is that the new stock, thus sold, is entirely bereft of any voting power, except in case of actual or impending bankruptcy. General stockholders, to be sure, have always been inert, delegating most of their powers of election. But, at worst, they might always be stimulated to assert themselves; and, in any event, they all fared alike as respects profits or losses. Under the new style of corporations, such general stockholders are badly deprived of all rights in this direction, and new preferred stocks are sold up to the hilt of the value of the assets, if not beyond. The issues are called preferred stocks. They are really bonds. And, instead, as formerly, of being limited to a half or two-thirds of the tangible assets, no limit is now set, except the powers of absorption of the investing public.

"As for the second financial fashion—the wide distribution of stock to employees and to consumers of the corporation's product, whether electric service, steel, or what-not, the effect is bound to be cumulative with that of insinuation of banking power between ownership and operation. Corporations have always been susceptible to control by concentration of voting power. Far less than half of the capital stock may be as effective for such control as possession of an actual majority. But it is elemental, requiring no proof, that the larger the number of shareholders, the more easily may a small concentrated block of minority holders exercise sway over all the rest. With a dozen owners, probably fifty-one per cent will be necessary for dominance.

"The total number of stockholders in all sorts of concerns has almost doubled since 1900, rising to an aggregate of 14,423,000 in 1923. These shareholders now possess over $70,000,000,000 worth of stock at par, on the showing of the federal income tax returns. Such possession used to be confined to the wealthy and the well-to-do class. Now it comprehends the small householder and large numbers of wage-earners. The former concentration of wealth is now yielding place to so wide a diffusion as to call for public recognition by way of legislation or oversight. But the important point to note is that the wider the diffusion of ownership the more readily does effective control run to the intermediaries, in this case promoters, bankers, or management companies. Until corrected by appropriate revision of our corporation law or practice, this apparently healthful manifestation may contain the seeds of grave abuse."

British Labour party and unemployment

The Department has received the official report of the 25th annual conference of the British Labour Party, recently held at Liverpool. A resolution in regard to unemployment formed part of the co-ordinated policy of national reconstruction and reform that was adopted by the delegates. This resolution after declaring that unemployment is the inevitable accompaniment of the system of production for private gain, continues as follows:—

"The conference further demands the national adoption of the principle of the living wage as the first charge on industry, and as a means of increasing the purchasing power

of the people, which will stimulate production and so lessen unemployment.

"To alleviate the existing problem the conference demands the adoption of the Labour Party's Prevention of Unemployment Bill, which provides for the appointment of a National Employment and Development Board, consisting of the Ministers in the State Departments primarily concerned with employment and the development of the nation's resources, whose duties shall be: (*a*) To inquire into the nature of and remedies for unemployment. (*b*) To prepare schemes of national development, including schemes for the national ownership and better utilization and development of land, transport, mines and electrical undertakings, and to encourage the preparation of schemes of development in other parts of the British Commonwealth. (*c*) To take all the necessary steps, whether by legislation or by preliminary operations, to secure that such schemes can be immediately undertaken when the state of unemployment requires it. (*d*) To approve employment and development schemes from local authorities, and, failing local action during times of unemployment, to carry such schemes into effect. (*e*) To make advances, either by grant or loan, in respect of schemes of employment and development. (*f*) To present an annual report containing full details of the preparation, progress and execution of schemes of employment and development.

"The Board shall be provided with funds by parliament, the unexpended surplus each year, if any, being retained by the Board for disbursement as and when the Board thinks fit in the execution of its duties."

The late Hon. Robert Drummond

The Hon. Robert Drummond, Member of the Legislative Council of Nova Scotia, who died at Stellarton on the 26th December, 1925, at the age of 85 years, was one of the pioneers of the labour movement in Canada. Born in Scotland in 1840, Mr. Drummond came to Canada in 1864 and worked in the coal mines. He was one of the founders of the Provincial Miners' Association (afterwards the Provincial Workmen's Association) which was organized at Springhill, N.S. in 1879, and became its first grand secretary, holding that post for nineteen years. During that period he laboured unceasingly for an improvement of the conditions under which the miners lived and worked and had the satisfaction of seeing many of the reforms he desired put into effect. Among these were the arbitration of wage disputes between miners and employers; the establishment of schools for miners; the organization of miners' relief societies; the inspection of mines by representatives of the workmen when deemed necessary; workmen's representation on coroners' juries in accident cases.

When, very early in its career, the provincial Workmen's Association felt the need of an official organ to explain its aims to the general public, the grand secretary undertook to edit and publish a newspaper, the *Trades Journal*, which first appeared in January, 1880. When he resigned office in 1898, Mr. Drummond decided to found a paper in the interest of the coal trade as a whole, and in July, 1898, appeared the *Maritime Mining Record* which came to be regarded as an authority on coal mining matters. He was the author of a book, "Minerals and Mining, Nova Scotia," and according to press despatches, he completed just before his death, a history of the labour movement in that Province.

Mr. Drummond was at various times a Councillor of the Nova Scotia Mining Society; A Royal Commissioner of the Nova Scotia Stationary Engineers and a Royal Commissioner of Old Age Pensions. He was appointed to the Legislative Council in 1891. He was Mayor of Stellarton for several terms.

The Consolidated Mining and Smelting Company of Trail, B.C., gave a turkey to all of its married employees, and a ticket valued at $3 to all its single employees for a Christmas present, the ticket being turned into their retail store, the holder getting anything to that value. The company also gave a turkey dinner at Christmas to all of the unemployed in Trail. At the New Year the Company gave to all its married employees who had been in their employ one year or more a cash bonus of $50 and to single employees serving the same period of employment, a cash bonus of $25. To its employees (married) employed six months, but under one year, a cash bonus of $25, and to its single employees, for the same period of employment, $12.50.

A delegation representing the conductors and trainmen's organizations in Saskatchewan proposed to the Provincial Government in December that the Workmen's Compensation Act should be amended so as to bring conductors and station masters within its scope. The delegation also asked that the Attachment of Debts Act be amended to provide for judgment being secured before a garnishee became effective. Instances of cases where hardship had been suffered by railway employees were given by the delegation.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

THE employment situation as reported by the local superintendents of the Employment Service of Canada at the end of December was as follows: The particular period covered by this report is always quiet in regard to industry and employment. Out-of-door work is usually curtailed, while the holiday season to some extent interrupts industry. While the end of December, 1925, was no exception to this rule, still a survey of conditions in Canada on that date does not reveal unemployment of exceptional proportions, and affords some ground for expecting an improvement in certain industries during the succeeding weeks.

In the Province of Nova Scotia the fishing industry reported that good catches were being made. Logging, which had been interfered with by the holidays due to men leaving for home, commenced to revive at the end of the month, with increases in prospect. The coal mining industry was rather active. Some of the manufacturing plants showed the usual seasonal slackening of effort to allow of stock-taking and repairs, but the iron and steel industry was fairly busy. Construction had reached a minimum. Freight traffic was reported as fairly heavy.

As in Nova Scotia, the fishing industry in the Province of New Brunswick reported fair catches. In this Province, likewise, logging showed signs of increased activity. The outlook in the manufacturing industries was reported as good, although some slackening of effort due to seasonal overhauling and repairs was noticeable. The construction industries were very quiet. Railroad freight traffic has been better in recent months, and has shown cumulative gains.

In the Province of Quebec farm placements were very few. As the logging season had progressed the demands for bushmen had been falling off accordingly. In this Province the manufacturing industries were reported as fairly satisfactory. In Quebec the leather industry, following the cessation of the industrial dispute, was working normally. From Sherbrooke it was reported that the textile industries had improved. In Three Rivers pulp mills were very active and other manufacturing was normal. In Montreal the printing trades were still rather slack, but the clothing, rubber and textile industries were fairly busy, while an improvement was reported in the tobacco and cigar industry. Throughout the Province construction, except some finishing on buildings started earlier in the year, was rather quiet. Transportation was fair and trade was good. The general outlook for the rest of the winter was stated as quite satisfactory.

From Ontario it was reported that as was to be expected at the time of year, the demands for workers were not heavy, although the situation generally was regarded as favourable for the season. Farm orders were not as numerous as is customary, and such as were being received were quite readily filled. Manufacturing activity in the central and southwestern portions of Ontario showed no slackening of effort, while mining and lumbering and allied lines in the northern section were busy, and continued to absorb additional workers. Building construction, although drastically curtailed, continued to give a fair measure of employment considering the season. Several superintendents reported that unemployment in their localities was markedly less than one year ago.

With no shortage of farm hands in Manitoba, fair demands for their services were being received at the offices, but few placements of men in the bush were being made. Conditions generally were quiet and some unemployment was noticeable. The completion of a contract which had just been let for one million dollars in pulp and paper mill buildings to be erected in the Winnipeg district, will give a considerable amount of employment.

The demands for farm hands in Saskatchewan were not very heavy, and quite sufficient applicants were available, although there was no very noticeable surplus. A number of men making application at the employment offices were willing to accept bush work, but the demands for workers of this class were very light. Steady employment available to applicants was rather meagre, and the volume of casual work offering was insufficient to take care of all persons applying for it.

As in Saskatchewan, the demands for farm workers in Alberta were only in fair numbers, and an excess of competent applicants was reported. Out-of-door work generally had been curtailed, although it was reported from Calgary that the weather was sufficiently mild to permit of highway work. Logging camps appeared to be filled, and there was a very small demand from them for additional workers. The coal mines were none too active, and the placements being made were few. Although unemployment was on the increase, it appeared to be less than at the same time the year previous.

Lumbering and logging in British Columbia,

besides being interfered with in certain localities by the holiday season, have been hampered in many districts by unseasonable weather, but the prospects for the new year were reported as fairly good. The metal mining concerns in this Province were not taking on many additional workers, although there appeared to be no noticeable slackening of effort. On Vancouver Island coal mining was fair. The manufacturing industries showed no change. As is to be expected, the construction industries were quiet. Although quite a bit of unemployment was in evidence throughout the Province, the situation appeared to be somewhat more favourable than was the case twelve months before.

EMPLOYERS' REPORTS.

Employment at the beginning of December, 1925, showed a further seasonal reduction, but the declines were smaller than is usual at that time of year. The index number continued to be higher than on the same date of 1924. All provinces recorded reduced employment, the curtailment being most pronounced in Quebec and Ontario. In the Maritime Provinces, the decreases were less extensive than those noted on the same date of the preceding year; fish canneries, lumber mills and rolling mills released employees, while construction also showed important seasonal losses. Logging, coal mining, transportation and trade, however, were seasonally more active. In Quebec, where the seasonal contractions exceeded those registered on the same date of 1924, the largest recessions were in construction and transportation and saw-mills. Trade and logging, however, reported improvement. In Ontario, manufacturing recorded curtailment, particularly in the lumber milling and fruit and vegetable canning divisions, while construction also showed marked seasonal losses and transportation was slacker. Trade, logging and textiles on the other hand, registered increased employment. In the Prairie Provinces, there were heavy losses in railway and highway construction, but logging, mining, steam railway operation and trade registered heightened activity. In British Columbia, manufacturing, railway and highway construction afforded less employment, while building construction, logging, shipping and trade showed improvement.

Employment in three of the eight cities for which separate tabulations are made—Toronto, Hamilton and Windsor and the Border Cities—showed increased activity, but losses were recorded in Montreal, Quebec, Ottawa, Winnipeg and Vancouver. In Montreal, improvement in manufacturing and trade was offset by declines in construction, transportation and services. In Quebec, manufacturing and transportation afforded less employment. In Toronto, there were large gains in retail trade and smaller increases in manufacturing, but employment in construction declined. In Ottawa, lumber mills and construction released employees. In Hamilton, manufactures and trade afforded more employment, while there was curtailment in building. The situation in Windsor and the Border Cities showed very little general change. In Winnipeg, manufacturing was slacker. In Vancouver, construction and trade were more active, while there were declines in manufacturing and in transportation.

An analysis of the returns by industries shows that there was a large falling off in employment in manufacturing, chiefly in lumber mills, but to some extent in fish, fruit and vegetable canneries, electric current plants, and mineral product works. On the other hand, boot, shoe, rubber, textile and iron and steel factories afforded more employment than in the preceding month. The net reduction on December 1, 1925, was considerably smaller than that recorded on the same date of 1924. Logging, coal mining and trade registered heightened activity, while transportation, construction and maintenance and services released employees.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of December, 1925.

TRADE UNION REPORTS.

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month, with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The percentage of unemployment reported by local trade unions at the end of November was slightly larger than that recorded at the close of October, 5.7 per cent of the members being idle in the month under review as compared with 5.1 per cent at the end of the preceding month. The situation was considerably better, however, than in November, 1924, when the unemployment percentage stood at 9.7. Statements were tabulated from 1,532 labour organizations representing 147,853 persons of whom 8,445 were out of work. The decrease in activity as compared with October although small was general through-

out the various trades and industries. All provinces except Quebec and Alberta reflected less favourable conditions than at the end of October, an increase of 2.6 per cent in unemployment in New Brunswick being the most noteworthy. Conditions were more favourable in all provinces except New Brunswick than in November, 1924, while in that province the change was scarcely perceptible. In the manufacturing industries, as a whole, the decline in the volume of employment as compared with October was nominal. Cigar and tobacco workers, paper makers, printing tradesmen, woodworkers, textile, garment and leather workers, were all slightly less active, but the increases in employment among iron and steel workers and metal polishers nearly offset the declines in the other trades. Nova Scotia coal miners reported more idleness than in October, but conditions in Alberta improved to some extent, and the situation in British Columbia remained unchanged, no idle members being reported. Asbestos miners in Quebec and quarry workers in Nova Scotia were all fully engaged. Less employment was afforded in the building and construction trades, the percentage out of work standing at 12.4 on November 30 as compared with 11.4 in October. The situation for all tradesmen in the group with the exception of bricklayers, masons and plasterers were less favourable than in October. The level of employment in the building trades was, however, higher than in November of last year when 14.2 per cent of the members were unemployed. Slightly less activity than in October was reported by workers in the transportation group, especially by steam railway employees and in Quebec, by street and electric railway employees. Retail shop clerks were fully employed. Hotel and restaurant employees and barbers were more active than in October but theatre and stage employees and stationery engineers and firemen were slacker. No fishermen were reported out of work. Lumber workers and loggers registered considerable unemployment.

EMPLOYMENT OFFICE REPORTS.

During the month of November, 1925, the references to employment made by the officers of the Employment Service of Canada numbered 27,215, while the placements effected totalled 25,796. Of the latter, the placements in regular employment were 14,902 of men and 3,211 of women, a total of 18,113, and the placements in casual work were 7,683. Applications for work reported at the offices numbered 40,766, of which 30,995 were of men and 9,771 of women workers. Employers notified the Service during the month of 19,626 vacancies for men and 7,585 for women, a total of 27,211. It will be seen that a decline is recorded in the transactions when the above figures are compared with those of the preceding month, while an increase is shown when compared with the records of November 1924, the reports for October, 1925, showing 42,230 vacancies offered, 50,212 applications made, and 39,379 placements effected, while in November, 1924, there were recorded 23,438 vacancies, 40,078 applications for work, and 22,004 placements in regular and casual employment. A report in detail of the work of the offices for the month of November, 1925, may be found elsewhere in this issue.

PRODUCTION IN CERTAIN INDUSTRIES

Some figures indicating the movement of trade and industry in December and in previous months are given in the table on page 13.

The Dominion Bureau of Statistics reports that the production of pig iron in Canada in November, 1925, totalled 68,535 long tons, a decline of 7 per cent from the 74,013 tons produced in the preceding month. While the output was slightly less than the highest monthly record for the year established in October, the total was about 21,000 tons over the average monthly production this year and was almost double the 34,609 tons of September. Nova Scotia accounted for 42 per cent of the November total, the balance being produced in Ontario. By grades, this output included 41,386 tons of basic iron, 25,602 tons of foundry iron and 1,547 tons of malleable iron. Of this production, 59 per cent was made for the further use of the producing companies and the balance, or 41 per cent, was intended for sale. Blast furnaces charges in November consisted of 123,374 long tons of imported ore, 77,848 short tons of coke and 39,130 short tons of limestone. For each long ton of pig iron made the furnace charges were 4,059 pounds of imported ore, 2,290 pounds of coke and 1,151 pounds of limestone. On November 30, the capacity of the active furnaces in Canada was 1,825 long tons per day, or 36 per cent of the total capacity of all possible producers; at the end of October furnaces in blast represented 53 per cent of the total possible capacity. Two furnaces were blown out during the month, one at Sault Ste. Marie, Ontario, and one at Sydney, N.S., leaving five furnaces in blast on November 30th. The active furnaces were located: two at Sydney, N.S., two at Hamilton, Ontario, and one at Sault Ste. Marie, Ontario. Ferro alloys at 2,094 long tons marked a slight increase over the 2,041 tons of October and consisted mostly of the grade having a high manganese content. Small

quantities of ferro-silicon were also produced.

Steel ingots and castings in Canada in November reflected the lower output of pig iron by falling to 73,205 long tons, which although 33 per cent under the 108,868 tons of October was about double the 37,094 tons reported for September. The drop was in basic open hearth steel ingots made for the further use of the producers; this grade fell 34 per cent to 69,497 tons as compared with 105,410 tons in October. Alloy steel ingots at 1,998 tons and direct steel castings at 1,710 tons marked small advances. For the eleven months ending November the cumulative production of steel ingots and castings was 690,342 tons, an increase of 11 per cent over the 624,451 tons made during the same period of 1924. This year's output to date was composed of 663,059 tons basic open hearth steel ingots, 10,097 tons alloy steel ingots, 8,307 tons basic open hearth steel castings, 1,604 tons of converter castings and 17,186 tons electric castings.

Pig iron prices were higher in November, No. 1 foundry at Toronto being quoted at $26.85 and No. 2 foundry at $26.35 as compared with $25.35 and $24.85 respectively in October. At Montreal, both grades were $28.75 as compared with $27.25 in October. The Bureau's index number for Iron and Its Products based on prices at the middle of the month (1913 prices=100) declined from 147.3 to 147.1, higher levels for pig iron and scrap iron being more than offset by lower prices for tin plate, round and square steel bars, black steel sheets and wire nails.

Full statistics of coal production during November are not yet available. The output of coal from Canadian mines during October was 30 per cent greater than the production for the preceding month, and 2 per cent above the average for October in the past five years. The figures were 1,562,613 tons in October as against 1,193,454 tons in September, and an average of 1,525,355 tons for the month during the five preceding years. Production in October showed a considerable gain over September in all the coal-producing provinces; New Brunswick was the only province whose output was less than the average tonnage for the month in the five preceding years. Men employed in the coal mines of Canada during October number 27,407 of whom 21,050 worked underground and 6,357 on surface as compared with a total of 26,174 in September of whom 19,886 worked underground and 6,288 on surface. Production per man was 57.0 tons in October as against 45.5 tons per man in September. During October the production per man-day was 3.5 tons, as compared with 2.3 tons in September. The tonnage lost (Table No. 5) was largely due to "lack of orders," "absenteeism," and "other causes."

Eighteen cars containing approximately 1,384,829 pounds of silver ore were shipped from the Cobalt Camp during the month of December; this compares with eighteen cars of silver ore containing 1,321,156 pounds shipped in the previous month. The Nipissing Mines shipped 326 bars containing 372,087.04 ounces of silver, and The Mining Corporation of Canada shipped 176 bars containing 175,083.00 ounces of silver, making a total of 502 bars containing 547,170.04 ounces of silver shipped in the month of December. This compares with 568 bars containing 606,632.79 ounces of silver shipped in the month of November.

The report from the British Columbia Forestry Branch shows that 225,260,930 feet of timber board measure was scaled in the province in November. The total amount of timber scaled in the province during the first eleven months is given as 2,057,399,874 feet.

The gross earnings of the Canadian National Railways, including affiliated lines in the United States, amounted to $24,675,451 in November, 1925, as compared with $20,946,123 in November, 1924. The gross earnings for the first eleven months of 1925 are given as $221,119,532, as compared with $216,271,446 the first eleven months of 1924.

The gross earnings of the Canadian Pacific Railway Company as given in a preliminary statement, were $19,294,184 in November, 1925, as compared with $18,100,945 in November, 1924. The gross earnings for the first eleven months of 1925 were $163,537,460 as compared with $166,811,984 in the first eleven months of 1924.

BUILDING PERMITS.

According to a report prepared by the Dominion Bureau of Statistics, the value of the building permits issued in sixty cities during the month of November showed a decline of 30.4 per cent as compared with the preceding month, and of 23.4 as compared with November, 1924. The total value for November, 1925, was $7,696,099; for October, 1925, $11,059,697, and for November, 1924, $10,047,273.

The *Maclean Building Review* estimates the total value of the contracts awarded in December as $12,675,000 as compared with $46,973,000 in November, and $28,868,000 in December, 1924. During 1925 the value of construction contracts awarded amounted to $297,973,000 or $21,711,900 more than 1924, being an increase of 7.8 per cent. For the first time Quebec outstripped Ontario, the provincial totals being $124,509,000 or an increase of 39

per cent in Quebec, and $121,248,000, or a decline of 10.7 per cent in Ontario. In British Columbia there was a falling off in volume amounting to 7.3 per cent. In Manitoba all types of construction showed important increases and the yearly total was 101.6 per cent greater than in 1924. The Maritime Provinces showed small increases as follows: New Brunswick 1.3 per cent; Nova Scotia, 2.7 per cent and Prince Edward Island, 45.0 per cent. The figures for 1925 as given for the various classes of building are: residential $96,489,900; business, $73,067,100; industrial, $40,007,300, and engineering $88,408,700.

EXTERNAL TRADE.

The summary of Canadian trade prepared by the Department of Customs and Excise shows that in November, 1925, the merchandise entered for consumption amounted to $75,285,662 as compared with $66,229,498, in November, 1924. The domestic merchandise exported amounted to $140,279,235, in November, 1925, as compared with $143,548,112 in October, 1925, and $118,964,536 in November, 1924. Foreign merchandise exported amounted to $1,079,270 in November, 1925, and $911,653 in November, 1924.

The chief imports in November, 1925, were: Fibres, textiles and textile products, $14,476,897; iron and its products, $12,779,135, and non-metallic minerals and products, $10,609,237.

The chief exports in the same month were in the groups of agricultural and vegetable products, mainly foods, $66,869,923; wood, wood products and paper, $24,021,288; animals and animal products, $18,090,936. In the eight months ending November, exports of agricultural and vegetable products, mainly foods, were valued at $334,163,941, and wood, wood products and paper at $186,484,580.

Strikes and Lockouts

The time loss due to industrial disputes in December was less than during November, 1925, but greater than in December, 1924. There were in existence during the month seven disputes, involving 1,781 employees, and resulting in a time loss of 14,937 working days, as compared with 10 disputes in November, involving 3,844 workpeople and resulting in a time loss of 38,582 working days. In December, 1924, there were recorded three disputes, involving 125 employees and a time loss of 1,865 working days. Four of the strikes and lockouts commencing prior to December, and the one dispute commencing during December, terminated during the month. At the end of the month, therefore, there were two strikes and lockouts affecting 129 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected, but which had not been formally called off.

Prices

Retail food prices continued to advance due mainly to higher prices for potatoes and eggs. The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty ctiies was $11.56 at the beginning of December as compared with $11.23 for November; $10.58 for December, 1924; $10.73 for December, 1923; $10.39 for December, 1922; $11 for December, 1921; $14.84 for December, 1920; $16.92 for June, 1920 (the peak); $13.65 for December, 1918; and $7.96 for December, 1914. Besides the substantial advance in the prices of potatoes and eggs there were less important advances in the prices of butter, milk, flour and sugar. No important declines occurred. Prices of beef, pork, bread, rolled oats, evaporated apples and prunes were, however, slightly lower. Including the cost of fuel and rent with that of foods, the total budget averaged $21.87 at the beginning of December, as compared with $21.51 for January; $20.90 for December, 1924; $21.21 for December, 1923; $20.97 for December, 1922; $21.49 for December, 1921; $25.67 for December, 1920; $26.92 for July, 1920 (the peak); $21.64 for December, 1918; and $14.26 for December, 1914. Fuel was slightly higher. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics continued to advance being 163.5 for December as compared with 161.1 for November; 160.9 for December, 1924; 153.5 for December, 1923; 153.1 for December, 1922; 150.6 for December, 1921; 217.2 for December, 1920; 256.7 for May, 1920 (the peak); and 205.6 for December, 1918. In the grouping according to chief component material five of the eight main groups were higher, two were lower and one was unchanged. The Vegetables and their Products group advanced substantially because of higher prices for wheat, flour and other milled products, hay and straw. Higher prices for cattle, hogs, beef, milk, butter and furs caused an advance in the Animals and their Products group. Slight increases occurred in the Wood and Wood Products group, the Iron and its Products group, and the Chemicals and Allied Products group. The Fibres, Textiles and Textile Products group declined due mainly to lower prices for cotton, cotton yarn, silk, sash cord and jute. Lower prices for copper, lead, silver and tin caused a decline in the Non-Ferrous Metals group. The Non-Metallic minerals group was unchanged.

Rural Co-operative Credit in China

An account of an interesting experiment in the formation of rural co-operative credit societies in China was given by Mr. Lawrence Impey in the *China Weekly Review* of September, 1925. Agriculture in China suffers from a total lack of modern methods in ploughing, sowing, watering and harvesting, and still more from the evil of usury but as a result of the formation of these credit societies it is stated that agriculturists are able to obtain loans at not more than 12 per cent, as compared with between 80 and 400 per cent formerly charged by money lenders. It is reported that loans are repaid promptly and interest charges are met when they fall due. In view of the success of the experiment a scheme has been prepared for its extension, particularly in those districts where it has made a good start, with a view to the possibility of the formation of federations. If this scheme can be carried out there is no limit to the beneficial results which should accrue to the rural population, for, besides the development of co-operative credit, plans can be worked out for co-operative selling of agricultural products and the buying of implements, fertilizers, etc. Beyond this lies the possibility of many projects of public utility, such as road building for transport of rural products, irrigation scheme for the benefit of farm lands, etc.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

Summary of Recent Proceedings

THREE new decisions of the Canadian Railway Board of Adjustment No. 1 have been received by the department. This board was established under an Order in Council dated July 11, 1918, while the war was still in progress, its purpose being to secure uninterrupted service on the railways. The board consists of six representatives of the railway companies and six representatives of labour, one for each of the railway brotherhoods. A summary of the recent decisions of the board is given in the following paragraphs. Summaries of earlier decisions appeared in the issue for October, 1925, and in previous issues.

Case No. 263.—Esquimalt and Nanaimo Railway Company, and Brotherhood of Railroad Trainmen.

A difference of opinion arose between the officers of the company and the brotherhood with regard to the payment of crews on a mixed passenger and freight assignment on the Port Alberni subdivision. The company contended that they had followed the procedure laid down in the existing agreement, which provides that the rules and conditions governing trainmen in the valley territory of the British Columbia district of the Canadian Pacific main line should be used as a basis for computing the time of this subdivision. The employees contended that Article 1, clause 1, should govern in this case, and that for "mixed" runs the rates should be "not less than the minimum passenger rates exclusive of overtime, detention or switching." The board found that the company's contention was sustained by the fact that the rules and rates proposed by the company had been accepted by the employees without question for five months.

The claim of the employees was denied.

Case No. 264.—Canadian Pacific Railway (western lines) and the Brotherhood of Railroad Trainmen.

The company and the trainmen disagreed as to the practice that should prevail in reference to six-day assignments, the employees contending that Article 18 of the yard schedule forbids the company to make six-day assignments which include Sunday, but exclude some other working day, and that if such an arrangement is permitted, payment should be made on the basis of the full number of working days in the month. They claimed that this contention was supported by the board's decision in Case No. 139 (LABOUR GAZETTE, November, 1922, page 1176). The company on the other hand contended that in six-day assignments, the excepted day, that is the seventh day, was to be reckoned as the "Sunday" for the crew affected; that this view had been accepted by the employees hitherto, and that it was followed in the other branches of the railway service.

The board denied the contention of the employees.

Case No. 265.—Canadian Pacific Railway (western lines), and the Brotherhood of Locomotive Engineers; the Brotherhood of Locomotive Firemen and Enginemen; the Order of Railway Conductors; the Brotherhood of Railroad Trainmen, and the Order of Railroad Telegraphers.

In 1913 the company opened a new freight terminal at Coquitlam, 17 miles from Vancouver, the former freight terminal. From 1913 to 1917 men either living at Coquitlam or electing to live in Vancouver made their own arrangements for going to or from Coquitlam. In 1917 an arrangement was made whereby enginemen and trainmen were to be recompensed for expenditures for jitney fares paid in travelling between the two points. This arrangement continued until 1921 when the company intimated that it would not apply to men subsequently entering the service who elected to live at Vancouver rather than Coquitlam, and that jitney fares would not be paid to any employee transferred from Coquitlam to the Vancouver terminal. The employees contended that they had suffered much inconvenience and expense, and made certain demands, which the board allowed in a modified form, as follows:—

"1. There shall be one engineers' and one firemen's extra list which will apply to Vancouver and Coquitlam, these men to run first in first out when required at either of these stations.

"2. The company will provide means of transportation either by train, refund of jitney fares, or otherwise, for engineers, firemen, conductors and trainmen when living at Vancouver or Coquitlam to enable them to get to and from their working assignments with as little delay and inconvenience as is possible under the conditions and circumstances,

and arrangements for calling should be made accordingly.

"It is to be understood that this arrangement for transportation between Vancouver and Coquitlam, without expense to the employees, will apply to engineers, firemen, conductors and trainmen, who, in 1917, held seniority rights, and have since continuously held such seniority rights, in the exercise of which they might at some time be engaged in engine or train service at and running out of Vancouver or Coquitlam."

STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1925

THE number of strikes and lockouts during December was seven, as compared with ten in November. The time loss for the month was greater than during December, 1924, being 14,937 working days, as compared with 1,865 working days in the same month last year.

Date	Number of disputes	Number of employees involved	Time loss in working days
December, 1925.....	7	1,781	14,937
November, 1925.....	10	3,844	38,532
December, 1924.....	3	125	1,865

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees at its commencement and lasting more than one working day. Disputes of only one day's duration, or less, and disputes involving less than six employees, are not included in the published record unless at least ten days' time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Six disputes, involving 1,716 employees, were carried over from November. Four of the strikes and lockouts commencing prior to December, and the one dispute commencing during December, terminated during the month. At the end of December, therefore there were on record two strikes and lockouts as follows: fur workers at Montreal and moulders at Owen Sound.

The record does not include minor disputes as described in the previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected thereby, although the unions or organizations concerned have not yet called them off. Information is available as to four such disputes, namely, cigarmakers at Montreal, commencing March 24, 1925; moulders at Guelph, June 2, 1924; moulders at Galt, August 2, 1922, and moulders at Sarnia, March 3, 1925. During December information reached the Department that the strike of moulders at Hamilton, commencing January 30, 1925, had lapsed. It has also been reported that the strike of street railway employees at St. John, N.B., commencing June 29, 1921, had lapsed, and no benefits had been paid to the strikers unemployed since June, 1925.

The dispute which began during December was for an increase in wages. Of the strikes and lockouts which terminated during December, one ended in favour of the employees, two in favour of employers, and two ended in compromises or were partially successful.

Reference was made in the November LABOUR GAZETTE to a strike of coal miners at Canmore, Alta. Further particulars were received since as follows: On November 10, 250 coal miners struck in support of two coal miners in demanding a higher rate of pay for certain work. After failure to secure a settlement between the men concerned and the pit boss, the miners went on strike. After three weeks it was agreed to refer the dispute to the general manager of the company and the officials of the Canmore Miners' Union, as provided in the agreement between the union and the company and work was resumed November 26.

The following notes give particulars in regard to certain disputes in addition to information given in the tabular statement.

COAL MINERS, DRUMHELLER AND WAYNE, ALBERTA.—A strike involving 1,465 coal miners in the Drumheller and Wayne fields in the Red Deer valley in Alberta, occurred on November 30, for an increase in wages. The dispute appears to have originated in a demand by the drivers for an increase of 50 cents per day and spread to the other classes.

Some of the miners at Drumheller returned to work on December 7, some on December 14, receiving an increase of about five per cent granted in the union mines on December 7, dating from December 1, by the operators who had an agreement with the United Mine Workers of America. The drivers' pay was increased from $4.90 per day to $5.25. The miners at Wayne returned to work on December 21, at the rates prior to the strike.

COAL MINERS, COALHURST, ALTA.—A one-day strike of 65 coal miners occurred at Coalhurst, Alta., on December 14, for an increase in wages. The rates paid were $4.90 for drivers and $4.40 per day for grippers, and the men demanded an increase of ten per cent. The mine was closed down throwing out of employment 450 other miners. Negotiations were carried on and work was resumed December 15, at an increase of seven per cent, bringing the rates to $5.25 per day for drivers and $4.71 per day for grippers.

TAILORS (CUSTOM, WOMEN'S CLOTHING), TORONTO, ONT.—On November 16, a strike of nine tailors (male) occurred at Toronto for a higher rate for a particular piece of work for two men. During December the Fair Wages Officer of the Department of Labour was requested to mediate, but was informed by the employer that the strikers had been replaced by other workers.

HAT AND CAP MAKERS, TORONTO, ONT.—During June, a dispute occurred involving some 200 hat and cap makers in the employ of twelve firms, for union recognition. Towards the end of September all but ten strikers had been replaced, and by the end of December information available indicated that employment conditions were no longer affected.

PRINTING COMPOSITORS AND STEREOTYPER, EDMONTON, ALTA.—The dispute of printing compositors and stereotyper at Edmonton on June 19, against a reduction in wages in violation of existing agreements, resulting in the suspension of publication, terminated December 2, when publication of the paper was resumed under new management. The rates of wages remained the same as prior to the strike.

BOILERMAKERS AND PIPEFITTERS, VICTORIA, B.C.—This strike was carried over from the previous month's record and terminated December 4, a partial increase being granted, bringing the rates paid to $6.40 and $5.60 per day from $6.20 and $4.80 per day.

STRIKES AND LOCKOUTS DURING DECEMBER, 1925

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and lockouts commencing prior to December, 1925.			
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, Drumheller and Wayne, Alta.	1,465	11,465	Commenced November 30, for increased wages. Settled by negotiations and work resumed December 7, 14 and 21; miners partially successful.
MANUFACTURING—			
Clothing, including knitted goods:			
Hat and cap makers, Toronto, Ont.	.....	.....	Commenced June 16, for recognition of the union. Information available indicates employment conditions no longer affected.
Tailors (Custom, Women's clothing), Toronto, Ont.	9	45	Commenced November 16, for increased wages for piece work. Information available indicates strikers were replaced by December 7.
Fur and leather products, other than boots and shoes:			
Fur workers, Montreal, Que...	120	3,120	Commenced April 1, failure to renew agreements and proposed substitution of individual agreements. Unterminated.
Printing and Publishing:			
Printing compositors and stereotyper, Edmonton, Alta.	13	13	Commenced June 19, against a reduction in wages. Settled by resumption of publication of paper, December 2 at previous rates of wages.
Iron, steel and products:			
Moulders, Owen Sound, Ont...	9	234	Commenced January 19, 1925, against a reduction in wages. Unterminated.
CONSTRUCTION—			
Buildings and structures:			
Boilermakers and pipefitters, Victoria, B.C.	20	60	Commenced November 26, for increased wages. Settled by negotiations and work resumed December 4.
(b) Strikes and lockouts commencing during December, 1925.			
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, Coalhurst, Alta...	65	65	Commenced December 14, for increased wages. Settled by negotiations and work resumed December 15; in favour of employees.

LABOUR LEGISLATION IN BRITISH COLUMBIA AT RECENT SESSION

THE second session of the sixteenth Legislative Assembly of British Columbia opened on November 2 and continued until December 19. Several measures of interest to labour were enacted, among these being an act to validate the Dominion Industrial Disputes Investigation Act in regard to disputes that would otherwise lie within the exclusive jurisdiction of the Province; an act providing for the fixing of minimum wages for males, and acts amending the Workmen's Compensation and Coal Mines Regulation Acts.

Industrial Conditions in Province.—The opening speech from the Throne gave a favourable review of industrial conditions in the Province during the past year. "Returns received in respect to the mineral production of the province indicate that the output for the present year will constitute a high record. The value of agricultural production continues to increase. The value of fisheries production is being maintained and it is expected that the 1924 yield will be equalled in 1925. The lumbering business of the province is now on a more satisfactory basis than heretofore. The industrial payroll continues to show a substantial advance over former years.

The Honourable J. D. McLean, minister of Finance, in the course of his budget speech, declared that in mining, fisheries, agriculture, lumbering, and manufacturing British Columbia ranks third among the provinces in gross production, but per head of population, it holds the premier position. Based on a population of 525,582, British Columbia had a total production of $391,810,734, or an annual per capita return of $746.80; Ontario, its closest competitor, with a total production of $1,838,868,599, showed a per capita return of $626.74. As a manufacture province British Columbia held third place, containing 3,345 industrial plants, employing 75,000 workers with an annual payroll of $106,800,000 and representing a capital investment of $437,863,970. The average wage paid in production industries and in manufacturing was also heavier than anywhere else in Canada, he continued, the figure being $1,184 for every worker. British Columbia was second in production of commercial apples, and apples from this province secured the highest price of any in Canada. Agricultural production had doubled in ten years; fisheries production was the highest in Canada; and mining production the highest per capita in the Dominion.

"British Columbia takes first place in Dominion production of copper, lead and zinc," the minister said, and second in gold and silver and third in coal. British Columbia had the whole zinc output and fifteen-sixteenths of the total lead production. Forest outputs were more than half the total for Canada."

Industrial Disputes Investigation Act.—The "Industrial Disputes Investigation Act (British Columbia)", as already stated, makes the Federal Act of 1907 applicable to industrial disputes otherwise within the exclusive legislative authority of the province. It will be recalled that the Dominion Act was amended at the last session of Parliament as the result of a judgment of the Judicial Committee of the Privy Council (LABOUR GAZETTE, June 1925). This judgment declared the statute to be *ultra vires* of Parliament in regard to certain sections which dealt with matters coming properly within provincial jurisdiction (LABOUR GAZETTE, February, 1925). The amendment of the last session declared that such matters might be dealt with under the federal statute provided legislation to this effect was passed by the province concerned.

Male Minimum Wage Act.—The Male Minimum Wage Act provides for the establishment of minimum wages for men employed in nearly all types of industry, the minimum rates to be fixed by the Board of Adjustment under the Hours of Work Act, 1923, which provided for an eight-hour day. The original bill as introduced by Major R. J. Burde provided for a minimum wage for all workers, but later, he accepted representations that the bill as it stood would be difficult to apply in practice, and substituted a new bill designed to apply only to workers in the lumber industry. The Minister of Mines desired to have the new bill enlarged to include the coal mining industry, but opposed any further extensions, which he considered would make the act too sweeping and tend to destroy its effectiveness. The legislature however decided in the end to accept other amendments restoring the general character of the act and making it applicable to every class of occupation with the exception of those mentioned in the last section of the act. The text of the act is as follows:—

MALE MINIMUM WAGE ACT

1. This Act may be cited as the "Male Minimum Wage Act."

2. In this Act, unless the context otherwise requires:—

"Board" means the Board of Adjustment constituted under the "Hours of Work Act, 1923";

"Employee" means every adult male person to whom this Act applies who is in receipt of or entitled to any compensation for labour or services performed for another;

"Employer" includes every person, firm, or corporation, agent, manager, representative, contractor, sub-contractor, or principal, or other persons having control or direction of, or responsible, directly or indirectly, for the wages of, any employee to whom this Act applies;

"Minimum wage" means the amount of wages fixed by the Board under this Act;

"Wage" or "wages" includes any compensation for labour or services, measured by time, piece, or otherwise.

3. It shall be the duty of the Board to ascertain the wages paid to employees in the various occupations to which this Act applies, and to fix a minimum wage for such employees in the manner provided in this Act.

4. The Board may conduct such inquiries as it deems necessary for the purposes of this Act, and for the purpose of obtaining information it shall have all the powers and authorities conferred by the "Public Inquiries Act" upon commissioners appointed under that Act, and the provisions of that Act shall extend and apply, mutatis mutandis, to every inquiry held by the Board under this Act. All witnesses subpœnaed by the Board shall be paid the same witness fees and mileage as are allowed by law to witnesses before the Supreme Court.

5. (1) After inquiry the Board may by order establish a minimum wage for employees, and may establish a different minimum wage for different conditions and times of employment.

(2) In the case of any employees classified by the Board as handicapped, or as part-time employees, or as apprentices, the Board may by permit in writing authorize the payment of a wage less than the minimum wage fixed under subsection (1); and may in any case limit and define the number of handicapped employees, or part-time employees, or apprentices to whom the lesser wage fixed under this subsection may be payable by any employer.

6. Every order of the Board establishing a minimum wage shall be published in the Gazette and shall take effect at the expiration of thirty days after the date of publication.

7. The Board shall supply copies of every order establishing a minimum wage to any employer requesting the same, and every employer of employees affected by any such order shall post and keep posted in a conspicuous place in his establishment or plant a copy of the order, so that all employees affected thereby may have ready access to and see the same.

8. (1) Every employer shall keep in his principal place of business in the Province a true and correct record of the wages paid to and the hours worked by each of his employees, together with a register of the names, ages, and residential addresses of all his employees.

(2) Every employer shall, on demand of the Board or any person authorized in writing by the Board, produce for inspection all records kept by him relating to the wages, hours of labour, or conditions of employment affecting any of his employees.

9. The Board may, either by any member of the Board or by any person authorized in writing by the Board, inspect and examine all books, pay-rolls, and other records of any employer which in any way relate to the wages, hours of labour, or conditions of employment affecting any employees; and may take extracts from or make copies of any entry in such books, pay-rolls, and records; and may require from any employer full and correct statements respecting the wages paid to his employees and the hours of labour and conditions of their employment duly verified on oath.

10. (1) Every employer who contravenes any order of the Board made under this Act by the payment of wages of less amount than the minimum wage fixed by the Board shall be liable, on summary conviction, to a penalty of not less than fifty dollars nor more than five hundred dollars for each employee affected; and in default of immediate payment of such penalty shall be liable to imprisonment for a period of not less than two months nor more than six months.

(2) Every employer who neglects or fails to perform any duty imposed on him by this Act, or who refuses or neglects to permit of any inspection or examination authorized by this Act, or who refuses or neglects to furnish any information required under this Act shall be liable, on summary conviction, to a penalty of not less than ten dollars nor more than five hundred dollars.

11. If any employee is paid less than the minimum wage to which he is entitled under this Act, the employee shall be entitled to recover from his employer, in a civil action, the balance between the amount paid and the amount of the minimum wage, with costs of action.

12. For the purpose of carrying into effect the provisions of this Act according to their true intent or of supplying any deficiency therein, the Lieutenant Governor in Council may make such regulations not inconsistent with the spirit of this Act as may be considered necessary, advisable, or convenient.

13. This Act shall apply to all occupations other than those of farm-labourers, fruit-pickers, fruit-packers, fruit and vegetable canners, and domestic servants.

Workmen's Compensation.—The Workmen's Compensation Act was amended to provide (1) That compensation shall be paid to injured workmen for the full period of their disability, provided that it lasts for fourteen days. This removes the previous three-day waiting period for which no compensation was payable; but where the injured man is laid off for less than fourteen days he will continue to suffer the three-day loss; (2) That the compensation payable to orphans shall be raised from $12.50 to $15 per month, the maximum total payment also being raised from $50 to $60; (3) That foster mothers shall be entitled to aid on the same basis as real mothers in respect of orphaned children until these children are sixteen years of age and provided that she actually cares for them.

Coal Mines Regulation.—An amendment to the Coal Mines Regulation Act provided safeguards in connection with the miners' selection of check-weighers. All mines on piecework are to have the privilege of nominating a candidate; elections are to be by secret ballot at the pit-head, or at a place to be agreed on by the majority of the employees; persons interfering with the nomination of candidates or obstructing the election of a check-weigher are made subject to a fine of $500 or imprisonment for one month, or both.

Chauffeurs' Licenses.—Under amendments to the Motor Vehicles Act persons designated as

chauffeurs under the Act will be only those specifically hired to drive cars professionally. Women chauffeurs will be freed from the necessity of carrying their license plates in their hats and may wear them on any part of their clothing. Applicants for chauffeurs' licenses who are under twenty-one can obtain their licenses only on direct application to the Superintendent of Provincial police, in order to restrict the number of minors driving professionally. Chauffeurs will also be required to obtain drivers' licenses so that they may be amenable to the same discipline as ordinary drivers in case of infractions of the Act. No applicant for a driver's or chauffeur's license is to be granted such license if it is obvious that he cannot read and understand the signs and notices which tell him how to observe the traffic laws. Another amendment corrected an abuse of the clause which exempts war veterans suffering from amputations from paying for their motor licenses. The amendment limits this exemption to one car.

Licensing of Barbers.—The Barbers' Act of 1924 was amended by the addition of a section providing that the provisions of the act are not to apply to unorganized territory, or to organized territory wherein the population does not exceed 750 persons.

Contributory Negligence.—The Contributory Negligence Act was passed to provide that "where by the fault of two or more persons, damage or loss is caused to one or more of them, the liability to make good the damage or loss shall be in proportion to the degrees in which each person was at fault." Liability will be apportioned equally if it should prove impossible to establish the degree of fault.

Similar acts were passed last year in Nova Scotia and New Brunswick, and in Ontario in 1924; the purpose of these acts being to establish uniformity in this class of legislation throughout the Provinces of Canada.

Old Age Pensions

The following resolution was passed unanimously by the Legislature, reaffirming the resolution passed at its previous session (LABOUR GAZETTE, January, 1925):—

Whereas at its 1924 session this legislature unanimously went on record as approving the principle of old-age pensions, and as being in favour of the Dominion Government enacting legislation which will bring the same into effect at an early date:

And whereas the Dominion Government has expressed its willingness to co-operate with the Provinces in establishing an old-age pension scheme:

Therefore be it Resolved, That this House reaffirms its decision of last year; that the necessary steps be taken to formulate some plan, in conjunction with the Dominion Government, to provide old-age pensions; and that the other Provinces of the Dominion be requested to take similar action.

And be it further Resolved, That an humble Address be presented to His Honour the Lieutenant-Governor, praying that he will cause to be conveyed to the Secretary of State for Canada and the Provincial Secretaries of the various Provinces this Preamble and Resolution.

Production in British Columbia in 1924 and in earlier years

The Minister of Agriculture of British Columbia, in reply to questions in the Provincial Legislature on November 16, furnished the following information as to the quantity and value of various commodities in the province in 1916 and 1924. The Minister of Mines, on November 17, stated the quantity and value of the minerals produced respectively in 1914 and 1924.

PRODUCTION IN BRITISH COLUMBIA IN 1914, 1916 AND 1924

—		1914	1924

RATES OF ASSESSMENT FOR WORKMEN'S COMPENSATION IN NEW BRUNSWICK FOR 1926

The Workmen's Compensation Board of New Brunswick, in accordance with the provisions of the provincial act, have given notice to the employers in the various classes of industry in the Province of the rates of assessment to be charged against them in 1926, these rates being based upon estimates of the amounts required to provide funds in each class to meet all claims for compensation payable in the coming year. Some changes are made from the rates for 1925 (LABOUR GAZETTE, January, 1925, page 27), indicating to some extent the accident record of the several classes in which they occur.

Class 1 (Mining, quarrying, etc.).—Increases are made in this class, the rates for coal mining being advanced from $4 to $5, and for mining other than coal from $2 to $3. In manufacture of brick, cement, etc., the increase is from $2.50 to $3.50, and in the stone quarrying group, from $2.25 to $3.

Class 2 (Lumbering, sawmills, etc.).—The rates in this class remain unchanged, with the exception of the furniture manufacturing group, which is raised from 50 cents to $1. Members of the New Brunswick Lumberman's Association had asked the Provincial government to reduce the rates charged against their industry, claiming that these were excessive. No change, however, is made in the rates for 1926, which remain as in 1925, namely $4.50 for sawmills, etc.; $2.25 for planing mills, lumber yards, etc.; $4.25 for logging; and $1.70 for pulp and paper mills.

Class 3 (Manufacturing steel, etc.)—The only change in this class is in vehicle manufacturing and blacksmithing group, the new rate being $1.25 instead of $1. The erection of steel buildings remains at $7; manufacture of stoves, implements, etc., at $1.50; foundries, car, engine and boiler making and repairs, at $1.50; garage repairs at $1.50; installation of machinery at $1.50; manufacture of bolts, nails, screws, etc., at $2; steel shipbuilding and repairing, at $2.50; battery service, etc., at $2.

Class 4 (Manufacturing—miscellaneous).—Most of the groups in this class remain unchanged, but the rate for dairy product manufacturing is raised from $1.25 to $1.50, and for window cleaning (as a business) from $3 to $4, while that for cotton and flax mills is reduced from 70 cents to 50 cents.

Class 5 (Building construction).—The only increase in this class is in the general construction group, the rate being raised from $2.20 to $3.

Class 6 (Construction of bridges, electric railways, etc.).—In this class the rate for wood bridge construction is raised from $4.25 to $5, and that for steel bridge construction from $7 to $8 while for sewer and waterwork construction the rate is reduced from $1.75 to $1.50.

Class 7 (Storage, dredging, etc.).—The rate charged against railway operation and maintenance is reduced from $2 to $1.50; but that for the operation of drydocks, including repairs to vessels, is raised from $2.50 to $3.50. The rates for stevedoring are also increased, that for the Bay of Fundy ports being $5 instead of $4.50, and for other ports $3.50 instead of $3.

Dividend of British-Canadian Co-operative Society

The *Canadian Co-operator* calls attention to the last quarterly report of the British Canadian Co-operative Society, Limited, of Cape Breton, Nova Scotia. "The sales for the three months ending November reached the great total of $332,938.10. As this is $11.733 over the corresponding period of the previous year, and, therefore, before the long period of the strike, it must be a record. The most outstanding feature in the statement is the great increase in members. During the quarter 378 were struck off or withdrew, there was a net increase of 346, the total at the close of the quarter being 3,217. The increased trade does not appear to be in proportion to the increase in membership, but we understand that industrial conditions are still depressed, and many are working short time. The directors recommend an interim dividend of 7 per cent on members' purchases, and half that rate on those of non-members.

The Calgary Trades and Labour Council recently asked that the Alberta Federation of Labour should hold a special convention in view of the coming session of the Provincial Legislature. The council desires amendments to the Mechanics' Lien Act.

JOINT CONTROL IN TORONTO FURNITURE FACTORY

Profit Sharing Scheme of Gold Medal Manufacturing Company

THE Gold Medal Manufacturing Company, furniture manufacturers of Toronto, have instituted a system of joint management and profit sharing for the benefit of their employees which contains many novel and interesting features. Mr. Bruce McMurtry, manager of the company, has supplied the LABOUR GAZETTE with the following particulars of the scheme.

Following the election by the employees in the factory and office of a Workers' Committee, on which the management has one representative, the Company purposes to give to the committee for division 50 per cent of net profits, after setting aside a 6 per cent dividend. In addition, the Company intends to set aside 10 per cent of net profits which is to be distributed to charity as the committee may direct.

Group insurance is included in the plan, each employee being insured for a sum ranging from $1,000 to $2,000, at a cost of 50 cents a month. An employee begins to participate in this benefit on the completion of three months' service. With the exception of the small contribution of the employee, the Company pays the group insurance premium.

The Workers' Committee, elected by their fellow employees, is composed of the following: Chairman, Bruce McMurtry, Manager of the Company; Members: Ivan McDonald, William Campbell, George Bunker, Harry Hinchcliffe, Frank Bradley, Robert Byron, O. J. Eaton, George Hughes.

The Committee meets every Monday to discuss various matters connected with the working of the whole organization, for better merchandise and more efficiency. This Committee has been authorized by the Company to vote in or out of their jobs any employees whose cases are brought up for consideration. As most of the plant is run on a piece work basis, the individuals affected are paid at the rate of $1 per hour whilst attending the Committee meetings. This Committee also discusses and recommends the wages which should be paid to the various workmen, and also the prices which should be paid for the different piece work operations. The members of the Committee are expected to visit those who are ill. At all times the committee has access to the company's auditor. This was given to assure all employees of a fair deal.

Employees of the Company who are members of labour unions and similar organizations are requested to take the scheme before their respective bodies for approval.

The Company is preparing a club room in the factory, where it is proposed to hold various entertainments, provide educational talks, and develop talent amongst the members of the organization.

Mr. McMurtry, in giving an outline of the new industrial organization, explains that "the basis of the whole thing is simply fair play to the men who produce and who are responsible to a greater extent than we may realize, for the success of every industry. If we do not treat labour fairly we cannot expect their best efforts and loyalty.

"The great fact with which we are confronted in the industries of to-day is that labour and capital are organized not in one, but in opposing camps, with the object not so much of promoting the common well-being of all connected with industry, as they are with the purpose of promoting their own particular good. The members of each camp consequently regard each other with distrust and suspicion. The capitalist is inclined to give the minimum that is necessary to secure the labour which he requires, and the worker in turn considers that all that should be required from him is the minimum of labour which will save him from dismissal. The existence of this mutual hostility and suspicion generates an atmosphere most unfavourable to the growth of that spirit of content and of mutual sympathy, and of active and cheerful helpfulness, on the existence of which the prosperity of industry and the happiness of all connected with it depends."

The tendency in the wage rates of street and electric railway employees during the past two years is reflected in a report of the Amalgamated Association of Street and Electric Railway Employees, which notes the following increases, decreases, and renewals of contracts at the same wage rate. From August 1, 1923, to January 31, 1924, there were 105 increases, 3 reductions, and 64 renewals at the same wage rate. From February 1, 1924, to July 31, 1924, increases, reductions and renewals were, respectively, 50, 6 and 110. From August 1, 1924, to January 31, 1925, there were 26 increases, 6 reductions, and 99 renewals; while from February 1, 1925, to July 31, 1925, there were only 16 increases, with 4 reductions and 115 renewals at the same wage rate.

PROGRESS OF JOINT INDUSTRIAL COUNCILS IN GREAT BRITAIN

EVIDENCE was given before the British Committee on Industry and Trade in October, by the Association of Joint Industrial Councils and Interim Reconstruction Committees. In the view of the Association, much may be expected of this form of organization, especially if carried out on the lines laid down by the Whitley Committee, having as its object the regular consideration of means affecting the progress and well-being of the trade concerned.

In the industries in which Joint Industrial Councils are established, disputes have been very rare, the atmosphere created by the constant meeting together of employers and workers tending to difficulties being reasoned out round the conference table. Such Councils exist to prevent rather than to settle disputes, and the witnesses contended that industrial troubles have mainly occurred in industries not associated with Whitley Councils.

Though a number of Industrial Councils have from various causes been disbanded or are not at present functioning, there are at the present time 50 Councils and seven Interim Committees, apart from the Government Joint Industrial Councils, actively functioning in various trades, and much lasting benefit has been derived in the majority of such industries by the setting up of this machinery.

The witnesses thought that the causes for failure could be roughly summarized as follows:—

(1) One reason was that the time of some Councils was occupied wholly, or almost so, with wages questions, other important matters affecting the well-being of those engaged in the trade being diregarded, as a consequence of which such a Council never had an opportunity of properly justifying itself;

(2) Another reason was insufficient financial support being given to a Council by the industry concerned, the result being that its field of operations and usefulness, particularly in research work, is very strictly limited;

(3) The witnesses thought the main weakness was inability to enforce decisions arrived at, members of Councils considering it a waste of time to attend meetings, often at great inconvenience, to discuss problems for the good of the industry, when they realized such decisions may not and often will not be carried out by unorganized firms.

As a result of this weakness in the Whitley scheme, the Association had promoted the Industrial Councils Bill, which passed its second reading in May 1924 by a majority of 220, but owing to the dissolution of Parliament shortly afterwards, was never placed upon the Statute Book. This Bill is being pressed with vigour, and is now receiving much greater support, the Trades Union Congress at its recent meeting deciding in favour of the principle. By the passing of the bill, more Councils would be established, especially in the larger industries, there being provision for a neutral person (the Minister of Labour) to suggest the formation of a Council in every industry where practicable. The main principle of the bill is the statutory enforcement, if and when desired, of agreements which have been voluntarily entered into by, or ratified by, Joint Councils representing as they do the vast majority in an industry. It is the same principle which underlies the Trade Boards Acts, the Agricultural Wages Act and the Railways Act; but in this case the Joint Industrial Council is a voluntary organization, and its decisions can only be arrived at with the approval of both the employers' and operatives' sections of the Council. It would also be quite optional on the part of a Council whether application be made for its decisions to be made legally enforceable; and an application for such an Order would need approval by a majority of both sections.

The witnesses also put forward the proposal that all Councils should include in their constitution regular machinery for resolving "deadlocks" in matters of wages, hours and cognate questions; also that Councils should carefully consider the utilization, in connection with preventing and settling industrial disputes, of carefully prepared statistics as to the economic position of the industry concerned, the wages paid and earned, costings, etc.

The American Federation of Labour as now constituted consists of four departments, 107 national and international unions, 49 state federations, 786 local department councils, 850 city central bodies, 436 local trades and federal unions, and 31,261 local unions. Its membership is reported as 2,878,297, which is net increase for year 1925 of 12,498.

The United States Railroad Labour Board has set aside one of its own decisions which awarded time and one-half for Sunday work for certain employees of American Railway Express Company. Railway express drivers, chauffeurs, conductors, and helpers protested against non-application of this decision by company. The Board upheld express company in this action.

NOTES ON LABOUR UNION ACTIVITIES

Legislation Suggested by Labour in British Columbia

Before the opening of the recent session of the legislature of British Columbia, the provincial executive of the Trades and Labour Congress of Canada laid before the Government the following proposals for legislation on matters affecting labour:—

Workmen's Compensation Act.—1. That the Act be amended by deletion of words "By accident" in second line of section 6. (Part 1 Div. 2. Compensation.) (Section 6 reads: "where in any industry within the scope of this Part, personal injury by accident arising out of and in the course of employment is caused to a workman, compensation as provided by this Part shall be paid by the Board out of the Accident Fund".)

2. Where compensation is based on rate of wages being paid, workmen shall have the right of appeal from the decisions of the Board's medical adviser to an independent medical board consisting of three doctors nominated by B. C. Medical Society. The decision of such appeal Board shall be final and binding.

4. Increase of compensation from 62 per cent to 66⅔ per cent same as Ontario and Manitoba.

5. Where injured workman has been transported from place of accident to a doctor or hospital outside the vicinity of his employment the cost of transportation shall be provided back to original point in addition to any compensation already given.

6. No commutation of compensation due under the Act shall be made without the consent of the injured workman. Compensation shall be payable for the full period during which earning capacity is impaired.

7. The Board shall defray all hospital charges of every description. It shall be illegal for a hospital to render any bill whatever to a workman for services rendered him while a patient under the Board.

8. The initial waiting period of three days shall be duly compensated for in all cases where incapacity exceeds that period.

9. That the Act be amended to bring casual workers within its scope.

10. That death claims be paid in full to the parents in cases where single men are killed.

Mother's Pension Act.—1. The word "indigent" to be eliminated from the regulations of the Board and the benefits of the Act extended to all cases where there are not adequate means of support. (The act reads: "'Mother' includes an indigent person, etc.")

2. Widows, with or without children, to be brought within the Act.

3. That the Act be amended allowing personal property up to $1,000 or real property assessed at not more than $2,000.

Eight Hour Bill.—We favour the extension and enforcement of the eight-hour principle to all industries within the province. (A list of the industries exempted by the Board of Adjustment from the operation of the Hours of Work Act was given in the LABOUR GAZETTE for April, 1925, page 346.)

Compensation of Police Court Witnesses.—Attention is directed to the hardship involved on witnesses summoned to give evidence in Police Courts. In many cases the loss of pay sustained by witnesses exceeds the penalty imposed on convicted persons. We submit that payment of witnesses should be provided for.

Old Age Pensions.—We urge the Provincial Government to continue their efforts to cooperate with other provinces and the Federal Government: in instituting adequate Old Age Pensions. In the meantime grants should be made to aged persons without means of support.

Minimum Wage Act.—This Act should be amended to include boys by substituting "Minors" instead of "Girls under Eighteen."

Amend Factory Act.—Strike out those sections wherein it permits children of any age to be "employed in the business of curing fish or packing fruit and the work incidental thereto, during times of the salmon runs or runs of other classes of fish and during the respective fruit seasons."

Also strike out the clause which removes the limit upon hours children may be employed which reads as follows: "Provided further that the limitations upon the hours of labour, the hours of commencement and cessation of work, as set forth in the Act, shall not be binding upon the employers of any child, young girl or woman in the business if canning, or curing fish, or fruit packing within the time or times aforesaid."

Automobile Owners' Insurance.—That all automobile owners be compelled to carry insurance against physical or property injury to others.

Unemployment.—We urgently impress upon the Provincial Government the necessity of passing legislation covering unemployment insurance.

Protection of Employees on Buildings.—We again request your consideration of our request at your last session for a Bill giving protection to employees on buildings and excavations.

Municipal Act and City Charters.—1. That legislation be enacted giving to every person, male or female, in all cities and municipalities, who is a British subject of 21 years of age and to all from whom a poll tax is collected the right to vote in all Civic and Municipal Elections.

2. That legislation be passed prohibiting any person to vote in any more than one polling division in any city or municipal election.

3. Legislation abolishing Property Qualifications for all elective officers in cities and municipalities.

Licensing of Automobile Mechanics.—That an Act be placed on the Provincial Statutes covering the examinations and licensing of all Automobile Garage employees.

Commercial Telegraphers Union of America

The thirteenth regular and tenth biennial convention of the Commercial Telegraphers' Union of America was held at Chicago in September, President Roscoe H. Johnson in the chair. The secretary-treasurer's report stated that the membership of the Union was at its highest mark since 1919, each six-monthly period showing a gain over the previous period. Since the last convention, held a Montreal in 1923, eight new charters were issued, including Broker and Leased Wire Divisions for Eastern Canada, Ontario, and Western Canada (west of Port Arthur), and district councils for Winnipeg, and Vancouver.

The combined financial statement on June 30, 1925, showed a total surplus of $15,254, or a net gain since 1920 of $18,340 and a total revenue of about $40,000 was indicated for 1925.

Funeral Benefit.—The Funeral Benefit Department has now been in existence three years. A total sum of $4,195.75 in funeral benefits had been paid to September 1, 1925, on a total of 51 deaths.

The most important development since the last session of the General Assembly was the adoption by referendum of a proposal to increase the funeral benefits from $50 to $75 and $100 for six months, three years and five years membership respectively, to $75 and $125 for six months and five years membership respectively.

Canadian Activities.—Conditions in Canada were outlined in the report of Vice-President Paul F. Schnur, who stated that "the commercial field, which comprises the big bulk of our Canadian membership, was the spearhead of activity. Our efforts to secure improved wages and working conditions for the rank and file of the two Canadian commercial divisions were successful to a degree. Improvements in wages and working conditions were also brought about for the two wireless divisions. The broker field also shows a marked improvement in general wage levels.

"The two-year period developed one strike —the Canadian Press strike of September last year, which affected approximately 85 members. The strike was unsuccessful and wages were reduced in the smaller towns as a result.

"Membership figures in Canada were considerably increased since the last convention, Canadian National System Division No. 43 showing the largest growth.

"It may be said," continued Mr. Schnur, "that the organization is in better shape than it was two years ago, both from the standpoint of growing mass intelligence and membership figures. Of course, the reactionary element is a serious hindrance and we shall have to reckon with that element until it is educated to progressive militancy or else swept along by the force of growing majority intelligence. Organization of Canadian Pacific Division No. 1 is practically at the same point as two years ago, with perhaps a slight growth in numbers. Canadian National Division No. 43 has experienced considerable growth, due to absorption of Western Union lines in British Columbia and inclusion of gangmen and foremen in our agreement with the company. There has also been some successful activity with regard to formerly neglected small offices, Central (Ontario) District deserving especial mention in this connection. Organizing activity in Marconi Wireless Division No. 59 has resulted in maintaining approximately the same numerical strength as obtained two years ago, with perhaps a slight decline manifesting itself this spring, due to falling off of lake shipping. Canadian Radio Division No. 65 has had considerable growth and is in a much improved condition both from the standpoint of numbers and better wages and working conditions. This division is one of the most efficient and militant in our Canadian jurisdiction, despite the fact that its members are civil servants. Alberta and British Columbia have also been affected. Divisions 53 and 67, who have jurisdiction over this field, have lost considerable members through this abandonment of lines and that, coupled with the secession movement in 1922, which pulled Division 53

to pieces and from which very little recovery has been made, has left the two Government divisions with but a skeleton of their former numerical organization.

"Canadian Press Division No. 52, having lost its strike of last September, refused to sign an agreement on the basis of the conciliation award, handed down subsequent to the strike, and is now without an agreement. Machines have displaced a few Morse operators and the minimum wage for some small towns east of Winnipeg was reduced from forty-five to forty dollars per week. The division membership remains substantially intact, and it is expected that an effort will soon be made to recover the wage loss at small points, and at the same time secure substantial improvements. The Western Union land lines in the Maritime Provinces have not as yet been taken over by the Canadian National Telegraphs, some hitch having occurred in the transfer negotiations. In the meanwhile these lines continue to be a potential field of membership for us.

"Negotiations with the two Canadian commercial telegraph companies took up more than a year of our time. Commencing with joint committee meetings in March of last year, we were working almost continuously on negotiations, Board hearings, etc., until early this summer." The vice-president gave full particulars of the Canadian press strike in 1924, presenting the report of the Board of Conciliation under the Industrial Disputes Investigation Act (LABOUR GAZETTE, December, 1924). "The award," he stated, "was so generally unsatisfactory that it could not be accepted, and the men chose to go without an agreement. In the meanwhile, however, the Company had put the reduction into effect." The award was rejected by both committees and further negotiations with the companies were finally productive of settlement of the dispute, Canadian National Division securing an increase of $105,000 per annum and signing up on May 8, while Canadian Pacific Division secured an increase of approximately $6,000 per annum and signed up July 1.

Trade Union Policy.—The president in his address dealt with the movement within the organization in the direction of revolutionary socialism. "I for one am glad that the show-down is here. No man or group of men can serve democracy and communism at the same time. The men and women of our movement can be revolutionists if they want to, but they cannot be revolutionists and constructive trade unionists on the same day of the week. No officer of this organization can be considered faithful to his trust, to the principles and fundamentals laid down by the American Federation of Labour if his office, and his time are used to propagate the false doctrines of the enemies of all that the American Federation of Labour represents. He is either for or against trade unionism. Certainly there can be found no honest middle path. If an officer of this organization awakes to the conviction that the trade union policy of the Commercial Telegraphers' Union of America is all wrong; that the only road to emancipation of the telegraph workers is the revolutionary road lighted by the Marxian torch, then that officer is in honour, bound to sever his connections with the organization."

The convention discussed the question of changing the Commercial Telegraphers' Union of America from a craft union form of organization into a class conscious, socialistic body. Unlimited debate was permitted in Committee of the whole on the various forms of labour organizations, but the general assembly voted to retain the policies under which the Commercial Telegraphers' Union of America has developed and progressed during its 23 years of life.

The office of vice-president for Canada was abolished, a vote of thanks being extended to Past International Vice-President Paul F. Schnur for his work. The resulting saving in salary and expenses of this office was turned back into the low-salaried divisions in the form of a reduction of *per capita* from $8 to $5. Divisions affected will be Canadian Pacific Railways System Division No. 1, Canadian National Telegraphs System Division No. 43, Western Union System Division No. 2, Postal Telegraphs System Division No. 55 and one or two other divisions.

Conventions in the future will be held every three years instead of every two years, but the General Executive Board retains the power to call a special session of the General Assembly whenever conditions warrant.

The convention adopted a proposal of the Canadian National Telegraph organization that messenger boys should be admitted to membership. Among other problems taken up were the automatic printer, the employment situation, transfers, exchange of minutes, the short trick and organization. Uniform by-laws were adopted and will be presented to each division with recommendation for adoption.

The Permanent Insurance Committee was instructed to take a group insurance with the Union Labour Life Insurance Company (in process of formation under the auspices of the American Federation of Labour), and with

the approval of the General Executive Board submit a plant to the membership for approval or rejection.

Officers were elected as follows:—

International President—Roscoe H. Johnson, re-elected.

International Secretary-Treasurer—Frank B. Powers, re-elected.

General Executive Board—Jos. F. Mallon, W. J. McMahon, J. G. A. Decelles, C. McMahon and A. T. Maddux, re-elected.

Electrical Communication Workers of Canada

A new Canadian union of commercial telegraphers was formed in Toronto on January 4, when, following a preparatory movement from within the Commercial Telegraphers' Union of America having such an objective, a committee elected the provisional officers of an organization known as the Electrical Communication Workers of Canada. All electrical workers in the communication services, including radio operators, were reported as being eligible for membership. It is the intention to call a Canadian convention within 60 days for the election of permanent officers, the establishing of permanent headquarters in Toronto and to approve the constitution under which the new union is to function.

Among the provisional officers elected were Henry Lynch, general chairman, and Robert I. Bradley, general secretary-treasurer. Both were former officers of the Commercial Telegraphers' Union of America, Mr. Lynch being former chairman of the Central District, Canadian National Telegraphs System Division, No. 43, and Mr. Bradley being the former secretary-treasurer of the same Division. On December 14, 1925, Messrs. Lynch and Bradley were expelled from the Commercial Telegraphers' Union of America after a trial board had found them guilty of "conduct unbecoming officers of the C.T.U.A." This charge had been preferred by Roscoe H. Johnson, president of the Commercial Telegraphers' Union of America, on the ground that Messrs. Lynch and Bradley were spreading secession propaganda which sought the establishment of an industrial union purely Canadian in scope. It was also charged that they were demanding a referendum vote of the Canadian National Telegraphs System Division No. 43 on the question of withdrawal from the C.T.U. of A. The accused claimed that they were acting within their constitutional rights. However, the trial board declared them guilty, and also ruled that "any officer or member of the C.T.U.A. who definitely aligns himself with the present secession movement will not again be admitted into the C.T.U.A. until and unless such application is approved by the general executive board of the union."

After the expulsion of Messrs. Lynch and Bradley, the secession movement developed into the formation of the new union as mentioned above. The new organization has the support of Paul Schnur, former vice-president of the Commercial Telegraphers' Union, whose position was abolished at the 1925 convention of the union. It was reported that the provisional general chairman of the new union claimed that 85 per cent of the telegraph operators of the Canadian National Railways System had joined the Electrical Communication Workers of Canada.

Canadian Organization of Boilermakers

Owing to dissatisfaction over the adoption of a compulsory insurance scheme by the International Brotherhood of Boilermakers, Iron Shipbuilders and Helpers, a secession movement from the parent body developed among a section of the Canadian membership. The Canadian branches, upon learning of the adoption of the insurance plan, were reported to have asked for a convention to be held in Montreal on December 14 in order to discuss the subject. In spite of the warning of the international president that such a meeting would be illegal, the convention was held, delegates being reported from several Canadian branches. With the object in view of severing relations with the International Brotherhood of Boilermakers, various alternatives were discussed, among these being affiliation with the One Big Union (rejected because of the radicalism of this body); formation of a new union (discarded because of financial stringency), and affiliation with the Canadian Brotherhood of Railroad Employees. At a subsequent meeting held in Montreal on December 18, it was decided to form a Canadian union and seek affiliation with the C. B. of R. E. A charter was issued to the new organization by the C. B. of R. E. under the title of Pioneer Division No. 182.

Issuing a statement with regard to the situation, J. A. Franklin, general president of the International Brotherhood of Boilermakers, declared that "the whole proceedure was manoeuvered by a small clique of not more than a dozen men who were more concerned with promoting a dual or secession movement than of the welfare of their International, they taking advantage of the dissatisfaction arising out of the insurance scheme to foster this move." The headquarters of the International Brotherhood had not received a report of any members withdrawing with the exception of

a number from Montreal, where it was stated that 248 had applied for membership in the new organization.

Brotherhood of Painters, Decorators and Paperhangers of America

The thirteenth biennial convention of the Brotherhood of Painters, Decorators and Paperhangers of America was held at Montreal, Quebec, in September. Addresses of welcome to Canada were given by the Honourable James Murdock, Minister of Labour, Mr. Tom Moore, President of the Trades and Labour Congress of Canada, Mr. Louis Guyon, Deputy-Minister of Labour of Quebec and Mr. J. T. Foster, president of the Montreal Trades and Labour Council, Mr. A. Bastien, general organizer of the American Federation of Labour in Canada also welcomed the delegates on behalf of the French Canadian labour movement.

President Hedrick in his address stated that there were 120,000 members of the Painters' union, and about a million building tradesmen in the ranks of organized labour. Comparing the effectiveness of political and union activity he said that "anything we cannot get within reason through the ranks of organized labour, we can never get through political action. He referred to the union jurisdiction problem and stated that their members did not want to be called off a building where every man on it carries a card, just because two of the trades cannot adjust their little difficulties. Officers of the Building Trades Department should be big enough to get together and formulate some plan or plans, whereby the work and dispute could be carried on until the matter has been investigated and adjusted.

The union delegates to the Building Trades Department of the American Federation of Labour were asked to consider a resolution demanding that all unions affiliating with the Department should order their members not to work with non-union men in any of the building trades.

Among other resolutions adopted by the convention were the following:—

Favouring uniform wage agreements.

Recommending better understanding between all building trades, and that a job committee be elected on each building, composed of the job steward elected by each trade.

Favouring a five day or 40-hour working week as a preventive of disease through constant exposure to lead poisoning.

That health measures be written into agreements, such as abolition of paint spraying, and use of harmless substitutes for dangerous poisons.

Instructing the Executive Board to draft a scheme of old age pensions. Favouring the establishment of a home for the aged and infirm, and a hospital for accident cases and occupational diseases.

Favouring the affiliation of the Painters' Union of the Workers' Health Bureau, a trade union, co-operative and health organization, and suggesting that this Bureau should draw up a national health standard for the painting trade.

Directing the Executive Committee to study various proposed system of insurance, with a view to the adoption of the one best suited to the union.

Favouring the establishment of scholarships at Brookwood Labour College, Katonah, N.Y.

President Hedrick and secretary-treasurer C. J. Lammert were re-elected for the ensuing term.

British Labour Directory

The Ministry of Labour of Great Britain has published a directory of Employers' Associations, Trade Unions, Joint Organizations, etc., 1925. The directory contains lists of organizations of employers, of workpeople, and of employers and workpeople jointly, so far as they are directly concerned with labour matters, together with the names and addresses of their secretaries. Associations with purely commercial, technical, educational, social or political objects are excluded. The numbers of various kinds of organizations included are as follows:—Employers' Associations, 2,403; Trade Unions and other Employees' Associations (other than Trade Councils), 1,250; Trades Councils (including Federations of Councils), 505; Conciliation and Arbitration Boards, etc., 418; Joint Industrial Councils, 62; Interim Industrial Reconstruction Committees, 7; Trade Boards, 65; Agricultural Wages Board and Committees, 47.

The new City Council of Edmonton, Alberta, at its inaugural meeting held in December, appointed a special committee to bring the unemployment situation in the city to the attention of the Dominion and Provincial governments. This action was taken after the Council had heard a delegation representing the unemployed.

The Belgo-Canadian Paper Company of Shawinigan, Quebec, put an end to Sunday work in its factories, commencing with the present month, work being suspended from midnight on Saturday nights for twenty-four hours. The factories formerly closed from 6 to 7 o'clock on Sunday mornings, resuming at 7 a.m. on Mondays.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Safety League for British Columbia

The Canadian National Safety League is considering the establishment of a provincial branch for British Columbia, similar in its character to the Ontario Safety League, the Province of Quebec Safety League, and the Maritime Safety League, organizations that are all affiliated with the Canadian League.

References to the work of these organizations were made in the LABOUR GAZETTE for January, 1925, and in previous issues (November 1923, etc.). The objects of the provincial safety leagues are as stated in connection with the formation of the Quebec organization in 1923, as follows:—

"To protect and safeguard the public, especially children, from the dangers of automobiles, railroads, street railways, and all forms of vehicular traffic on the public highways of this province.

"To educate the public through schools, churches, literature and all channels of publicity upon all matters pertinent to public safety.

"To minimize the injuring and killing of persons employed in stores, factories, workshops, and all departments of industrial and mercantile activity, by instilling into the minds of employers and employees the full meaning of "safety always."

"To co-operate in the prevention of destruction of lives and property by fire, to assist in the enactment and enforcement of all possible legislation for the improvement of public safety, and to encourage and assist the formation of Safety Leagues throughout the province.

South African Methods in Ontario Mines

Mr. T. F. Sutherland, chief inspector of mines for Ontario, recently returned from South Africa, where he had been studying mining operations as carried on there, with the view to suggesting such amendments to the Ontario Mining Regulations as would conduce to the better protection of the life and health of the workmen employed in Ontario mines. (This visit to South Africa, with the comments of the Provincial Minister of Mines thereon, was noted in the LABOUR GAZETTE for July, 1925, page 687).

It was considered the development of the mining industry of Ontario had reached a stage where the accident and death rate called for careful consideration. Up to the present time, little deep mining has been done except in some of the nickel mines. Silver mines are comparatively shallow, but in the gold mining area, the ore is found to extend and to maintain its value to considerable depths.

Suggested Safety Organization in Factories

The Department of Health of the Commonwealth of Australia has published a valuable report on Industrial Accident Prevention by Dr. D. G. Robertson (Service Publication No. 2). It is recommended that industrial safety organizations in large factories should consist of three branches: 1. General Safety Committee. 2. Workmen's Committees. 3. Safety Inspectors.

The General Safety Committee should consist of three or more persons; such as the Assistant Superintendent, Chief Electrician, and departmental heads. Its duties should be as follows: (1) Generally to supervise all accident prevention work. (2) To formulate general principles of safe working with the object of eliminating dangerous practices. (3) To see that first aid organization and equipment are maintained at the highest state of efficiency. (4) To consider reports of lost-time accidents common to all sections of the works, or of a particularly serious nature, and to devise means of preventing the recurrence of accidents of a similar nature. (5) To consider recommendations from workmen's committees involving special disciplinary action or expenditure and to make recommendations to the management on these points. (6) To make periodic inspection of the works. A general inspection of the plant should be made not less frequently than once a month. (7) The management having arranged for a supply of posters, the general safety committee to advise as to the most suitable methods and places for display, and to arrange mass meetings, exhibitions of films, etc. (8) The secretary of the committee to collate accident statistics rendered by departments. (9) To organize competitions and intensive campaigns. (10) To ensure that workmen's committees function efficiently. (11) To formulate safety working rules for the different departments.

The Workmen's Committee should consist of three or four members, one of whom acts as secretary and keeps notes of the proceedings and inspections. Where a safety inspector is appointed he should serve as secretary. The duties of this committee should be as follows: (1) To encourage and receive suggestions for the prevention of avoidable accidents. (2) By means of campaigns in their departments to warn their

fellow workers against unsafe practices. (3) To see that dangerous conditions are eliminated. (4) To make periodic inspections of the department, two thorough inspections being made each month. (5) To investigate all accidents noted in the first aid record book, with a view to devising means of preventing their recurrence. (6) To report to the General Safety Committee matters involving disciplinary action or expenditure.

The safety inspector should preferably devote all his time to safety work. Where the plant is not sufficiently large to justify this, he may have other duties, such as draughtsman, mechanical foreman, or efficiency engineer, devoting a regular portion of his time to safety inspections. The personal qualifications of a safety inspector are very important. He should have a good knowledge of machinery, and resourcefulness in solving the safety problems which arise. Above all, he should be able to work with the other employees and secure their co-operation without arousing antagonism.

Employees' Share in Accident Prevention

At the recent annual convention of the New York State Federation of Labour, State Industrial Commissioner J. H. Hamilton referred to the wage-earners' share in accident prevention as follows:—

"Of all the parties who may have an interest in this matter, it is the employee who has most at stake. He is the victim of accidents. He must bear the physical and mental suffering which after all constitute the most serious part of the cost; and by no means whatever can this be removed from his shoulders. Even under the most liberal schedule of compensation benefits in the country, as is that of the New York law, a great burden of financial loss falls upon the injured employee. Allowing for all of the money loss in accidents that the compensation statute shifts from the wage-earner to society, but bearing in mind the loss in excess of two-thirds of wages, and in the waiting period, which is not shifted, it may be estimated that wage-earners in this state still suffer in industrial accidents a financial loss annually of $24,000,000.

"The way an employee does his work is a large factor in his chances of injury. This must not imply that he alone can be held responsible for doing his work safely. The individual employee out of his own limited experience has no means of knowing all the possible hazards of his work and what it is necessary to do to avoid them; but careful observance of instructions about his work designed to make it safe, and of safety rules and regulations generally, are dependent upon his co-operation and conduct.

"The facts as to the causes of accidents afford evidence of the prominence of this matter of personal conduct of the employee for prevention of accident. When the 58,078 accidents for which closed compensation awards were made in the year ending June 30, 1923, are classified by general classes of causes, it is found that the largest class of all comprises accidents due to something in the "handling of objects" by hand. One quarter of the whole number or 14,917 fall in this group. Among them were 2,940 cases in which objects were dropped by the injured man or a fellow workman; 1,644 in which the workman was caught between objects; 1,269 in which something fell from a load or pile; and 3,767 in which strain in handling occurred. Obviously in such cases how the workman himself does his work is a highly important factor in the problem of reducing such accidents."

History of the Safety Movement

An outline of the history of the industrial safety movement was given by Mr. W. C. Dickerman, vice-president of the American Car and Foundry Company, at the ninth annual Safety Congress, held by the New York State Department of Labour.

The responsibility of employers was recognized from the earliest age. The obligation of the owner of the slave to feed, to clothe, and to keep the slave in good health, was clearly established. Later in the feudal ages, the lord of the manor, in return for certain services rendered by the "villein," was obliged to protect him against marauders; at times to furnish capital for his business endeavours, and generally to exercise a mild form of parenthood. With the formation of the medieval guilds, protection became more clearly systematized, and the relations between the master workmen and their assistants and apprentices took on many of the forms that are existing to-day. The guilds established pension systems to give relief to their workers in times of want, and generally exercised a supervisory control over the well-being of those employed in their respective industries.

"With the inception of modern mass production during the latter half of the eighteenth century, the sense of obligation on the part of the employer seems to have been lost. For a period of almost one hundred years the world underwent an era of magnificent expansion. Few rights, if any, were conceded to the workmen. Gradually public opinion began to make itself felt. In England the law of 1819 forbade the work of children under nine

and permitted their employment for twelve hours a day between the ages of nine and sixteen. In 1824 trade unions were legalized. Then followed two decades of agitation against the shocking conditions of labour, cruelties to children and the unsafe methods of work. In 1844, the first attempt was made to prevent accidents. The cleaning of machinery in motion by children and young persons was prohibited, flywheels were to be fenced off, and dangerous parts of machinery guarded. Fines for violations were to go to the injured persons. This is the first systematized attempt towards accident prevention that I have been able to find, and may be regarded as the birth of the safety movement. It is interesting to note that until 1853, the English labour laws applied only to textile factories.

"In Germany the development was much slower. This was due to two causes; first, Germany was naturally an agricultural country and secondly, the autocratic and monarchical form of government made it much less responsive to the opinions of the middle and working classes. In 1878 a unified act for all of Germany was enacted despite the opposition of Bismark, who already was planning a sick and accident insurance code such as was afterwards developed and put in force. Bismark's theory was that by placing the costs of sickness and accident on industry, the employer would be stimulated to greater efforts in prevention. In 1885 the Sickness Insurance and Accident Insurance Acts came into joint operation. These form the German scheme of which so much has been heard and which has had a profound influence on labour legislation everywhere. The history of the accident prevention movement in other European countries runs parallel with that of Germany and England.

"Towards the close of the nineteenth century labour began to assert its rights with more and more emphasis. Industrialists too began to realize that trade success can only be secured by the co-operation of the employer and the employee. Economists were preaching that there could be no wealth without labour. The old thought of a mutual obligation again came to the fore and has had a splendid florescence in the progress made during the first quarter of the twentieth century. The last twenty-five years have witnessed the inception, the development, and the active acceptance of pension systems, of works councils, of mutual benefit associations, of profit sharing, of stock distribution, and last, but not least, the striking promotion of the safety conception which has profoundly influenced not only the employer of labour but every phase of public interest."

Joint Study of Coal Dust in Great Britain and United States

An arrangement for co-operative research between the United States Bureau of Mines and the British Department of Mines in the development of safer mining methods, particularly in regard to the dangers of coal dust, was noted in the LABOUR GAZETTE for August, 1924. The result of this joint inquiry has been published lately by the Safety in Mines Research Board of Great Britain. Experiments were carried out in representative British and American mines, in order to ascertain the truth regarding the conflicting conclusions that had been formerly reached regarding the amount of stone dust which must be mixed with coal dust in order that the mixture shall be incapable of propagating flame when raised as a cloud in the air. The most important conclusion reached from the two series of comparative tests (which are described in the present paper) is that the behaviour of the American and British coals, selected as standards, is sufficiently uniform under similar conditions of testing to render available for direct application to British coals the results of the numerous series of experiments made with the Pittsburgh coal at the Experimental Mine in America, in order to gauge the effect of such factors as the degree of fineness of the dust and the direction of the ventilating currents.

Qualification of Coroners' Juries

The Vancouver Trades and Labour Council unanimously passed a resolution in December recommending that the foremen of coroners' juries in industrial fatality cases should be workers in the same trade as the deceased workmen. It was stated that in many cases wrong verdicts were returned at coroners' inquests in industrial accident inquiries, owing to the fact that jurors know nothing of the work at which the victim was employed.

Effect of Industrial Fatigue

The American Society of Mechanical Engineers, in a recent report, state that mistakes by over-tired workers constitute one of the greatest losses in industry:

"It is being realized more and more, that one of our greatest industrial wastes is the waste of human man power, and that unnecessary fatigue is one of the principal factors in causing this waste. It would seem that there is no scientific and experimental research that could be taken up by industry that would be more profitable and far-reaching in its results as one on industrial fatigue."

PROBLEMS OF ACCIDENT PREVENTION

MR. ETHELBERT STEWART, United States Commissioner of Labour Statistics, in a paper read before the American Association for Labour Legislation at the convention held at New York in December 30, discussed the question whether or not there has recently been a positive increase in the number of industrial accidents. "The accidents of 1925," he said, "have apparently exceeded those of 1924 as certainly the accidents of 1923 greatly exceed those of 1922. A careful statistician will ask two questions before he attempts to answer the question as to whether or not accidents are increasing; first, are there more men at work, or were men working more hours in 1923 and 1924 than they did in 1921 and 1922? In other words, is there a greater one-man hour exposure and what is the relation of the number of accidents to this one-man hour exposure? Second, is there more complete and better reporting of accidents and of one-man hour exposure now than formerly? An increase in accidents may mean a greater volume of men at work. It may mean better reporting.

"At present we have no serious machinery for the collection of accidents and especially for the collection of the base upon which to compute a rate, this base of course being the one-man exposure in the various industries being studied. On the face of it, accidents are increasing, yet in the only industry about which we really know anything, that of iron and steel, accidents are decreasing. The Bureau of Labour Statistics has for a series of years collected accident reports from the iron and steel industry in such a way that we can tell for the industry as a whole, and for the various departments of the industry and by occupations within the departments, whether or not accidents are increasing or decreasing. That is to say, we get the one-man hour exposure down to this detail and connect the accidents with this immediate exposure. The result of these figures is placed in the hands of the industry which several years ago began to take the matter of accident prevention seriously and used these figures to accomplish this purpose. The trend has been gradually and practically continuously downward. I hesitate very much to apply these figures, however, to industries which have not applied safety methods backed up by an intelligent survey of what parts of the industry are dangerous, or which have not applied such methods for any such length of time as has been true in iron and steel.

"I do not believe that the present trend in iron and steel is applicable to industry as a whole. My own judgment is that accidents are on the increase; that the reasons for this are:—First: In every recovery from a depression large numbers of new men are taken on and the accident rate for new men is always very much greater than for employees older in point of service; Second: There is a general speeding up of workers, both skilled and unskilled, a production per man hour increase which registers a greater number of accidents, and this would probably especially affect the accident rate among new men; Third: Better reporting; Fourth: During the War a great deal of safety work was done by a large number of firms and even where a safety engineer was not added to the personnel of

MEN EMPLOYED, AVERAGE PRODUCTION PER MAN, MEN KILLED, FATALITY RATES IN COAL MINES IN THE UNITED STATES, 1907 TO 1924

the establishment, yet the care and safety of employees at work was very generally made a function of the welfare administration. Since the War a great many of these positions have been abolished and much of the accident prevention work which requires a mechanical engineer has been thrown into the welfare departments presided over by sociologists.

"The Bureau of Labour Statistics in its attempt to secure an intelligent basis for accident rates has made arrangements with the firms that furnish the Bureau with its volume of employment, the number of men on the payroll at a given date, to also furnish us with their statistics on accidents distinguishing only between fatal and non-fatal. This gives us at least a start toward developing an accident rate by industries, though we are not yet prepared to attempt, outside of iron and steel, to show accident rates by departments within an industry.

"I have not as yet published any of the results of our efforts along these lines, but will probably do so within a few months. This will at least give us a start on a comparison of accidents with human exposure which will give us a chance to tell definitely some time whether accidents are really increasing or not."

Mr. Stewart appended to his paper tables analysing such figures on the coal industry as are available.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

THE notes in this section of the LABOUR GAZETTE relate to the work carried on by secondary vocational schools which receive federal grants under the provisions of the Dominion Technical Education Act. Other activities which have a direct bearing on the training of apprentices and industrial workers are also noted. The Dominion Government, through annual grants administered by the Technical Education Branch of the Department of Labour, assists the provinces in developing all forms of vocational education and industrial training which are of benefit to workers in various branches of industrial, commercial and home-making activities.

Employment Bureau at London Technical and Commercial School

At the annual commencement exercises of the London Technical and Commercial School, Principal H. B. Beal made three important announcements: first, the extension of the technical school employment bureau for graduates to embrace a register for all ex-students of the school, particularly for those prepared to fill more advanced positions; second, the granting of the privilege to students to specialize in some department in the school for a period of four or six months, if it is found necessary for them to leave school before having completed the regular period of two years required for general course work before specialization has been permitted in the past; and third, the donation of prizes and scholarships to the value of $25 each by a long list of individuals and firms in the city, who are interested in the progress being made by the technical school.

Vocational School as a Means of Selecting Apprentices

The following paper by Mr. C. J. Freund, supervisor of apprenticeship, Falk Corporation, is taken from the *Wisconsin Apprentice*, November, 1925.

For those who are willing to co-operate, the vocational school can be made an apprentice proving ground. One of the very great difficulties which confront all employers who are engaged in apprentice work is the extreme difficulty of finding boys and young men who are fully qualified in every way to become skilled mechanics. It frequently happens that a boy has the mental ability and the strength required for a certain occupation, but after several weeks of work it is discovered that the working conditions are detrimental to his health. Again, there are those who were very much fascinated by a trade considered from a distance, but find upon actual contact that it has certain features which are extremely distasteful to them. Still others appear to be high-grade boys upon interview, but when they are put to work in the shop and the first novelty of the work has worn off they are found to be an intolerable nuisance. The result of these conditions is that everybody in a plant from the superintendent down to the older apprentices and labourers is irritated by the constant coming and going of apprentices who are engaged, work for a day or so, and then leave again only to be replaced by others, who again disappear in their turn. The effect upon the body of apprentices, not to mention the working men in the plant, is far from gratifying. Foremen and supervisors become discouraged with the entire apprentice movement and are very apt to give even the best apprentices somewhat less attention and encouragement than they require.

The employer who will co-operate with his local vocational school will soon find that the school will provide an almost complete remedy for this great problem. In order to avail himself of the facilities provided by the school he must first throw overboard all stock prejudices against the vocational school, if he has them, and then he must become acquainted with the school, the people who administer it, and the teachers who are in charge of the classes there. He can almost invariably obtain from them information concerning any boy which will prevent mistakes made in the employment of apprentices. Under the Wisconsin law young boys must attend the vocational school one day in every week, and this time is spent under the care and direction of the vocational school staff, who are thus enabled to acquire very thorough knowledge regarding his character and ability. Accordingly, the vocational school becomes a civic bureau of information concerning all the young men in a community who might be considered as candidates for apprentice courses, and the employer who will take the pains to visit the vocational school to find out what the experience of the school has been with all the young men who apply to him for apprenticeship, will find his time and efforts very amply repaid. Of course, mistakes will be made and the school authorities cannot be expected to possess infallible judgment, but if he will engage only those boys who are recommended to him by the school he will find the turnover among apprentices in the first part of their training period very re-

markably reduced and the morale among his journeymen and apprentices very greatly improved.

The employer who is willing to invest a little money in apprentice-training activity can improve the situation almost to perfection if there is in his locality a vocational school which is quite well equipped with shops and tools. The employer can then not only receive information regarding the apprentice previous to engaging him, but he can also send him to school full time during the first few weeks or even months of his apprentice course so that he may work in the school shops and the shop instructor may determine very definitely for him whether the boy will be successful in his trade or not. If it is found that the boy will not qualify he can be paid off before he ever comes near the plant, and if he has demonstrated his ability he may be brought into the shop with little fear that he will not ultimately be successful. Inasmuch as the apprentice is required to attend vocational school four hundred hours in total during a four-year training period, the time spent at the school in this manner is not lost, as the school authorities will usually make it possible for the boy to absent himself from the regular half-day school attendance for the number of hours that he has spent full time at the school. The only chance which the employer takes is that he may be forced to discharge an apprentice after he has been at the school some time and will lose his wages, but his loss will be more than compensated for by the improved morale in the shop resulting from reduced apprentice turnover.

These suggestions are not merely theoretical, they are not based upon what ought to happen, but upon what has actually happened; they are based upon actual experience with a large group of apprentices at the Milwaukee Vocational school where it has been demonstrated over a period of nearly two years that the vocational school is fully qualified and equipped to make an intelligent and extremely profitable selection of boys and young men for apprentice training courses. This activity of the vocational school is no longer in the experimental stage. The experiment has been successfully completed and employers of apprentices should by all means avail themselves of the conclusions which have been reached.

The Apprentice Problem and its Solution

The following extracts are taken from an article by John F. Walsh, Secretary, Building Trades Employers' Association of Boston, appearing in *The Vocational Guidance Magazine* of December, 1925.

There is no real hope for better conditions in the building industry until there is a real, true and sincere adjustment in the attitude of parents, guardians and educators, and the general public towards encouraging more of the youth of our country in taking up and interesting themselves in the acquirement of skill and efficiency as trained mechanics and builders. The old days of indentured apprentices have passed by. The proper time to start training a boy to be a genuine trades mechanic is at the grammar school age. Modern parents appear to grow more indifferent and reluctant each year to the good old idea of making a skilled mechanic out of their boys. They seem not to care, or even think, at all about the many advantages and opportunities a boy who has learned a trade has over one who has not received such training. Parents close their eyes to the fact that character building is an important feature entering into the training and development of all successful skilled tradesmen.

The next most important step necessary in order to improve conditions in the building industry is to build trade schools, wherever necessary, more and more trade schools. The successful promotion of the second largest industry depends absolutely on making new mechanics, not perhaps in the old way of serving time as an indentured apprentice but in the new way of combining academic training with practical constructive experience on the job at definite percentage wage rates, according to the apprentice's periodic advancement while learning. At present the entire country is behind in developing apprentices in the building trades and we cannot put all the blame for our present unhealthy condition in the construction field on the heads of labour unions or contractors' organizations.

To-day we certainly ought to try to make all contractors have sufficient pride in their calling as builders to do something worth while for it by assisting in solving the apprentice problem. This can best be solved by establishing permanent public trades schools in all the principal cities or centres for the purpose of developing the youth of the land in callings that will give them healthful, enjoyable, and honest employment at rates of compensation which are better than a mere living wage. All half-hearted forms of endeavour in the matter of developing apprentices should be tabooed. The too prevalent idea of delegating only delinquent pupils to vocational training courses should be corrected at once. Nothing has done greater injury to the apprenticeship cause.

To-day both fame and good fortune await the man who builds a system of education

which will teach our present-day youth to understand the true value of learning a trade. To teach the boy to want to work is an excellent accomplishment for whose successful working out the parents and public schools of each community must be held directly responsible. We cannot delegate such an important obligation to a contractors' organization or a labour union for its ideal fulfilment. We can, however, insist upon and welcome their sincere co-operation. The apprenticeship problem will never be solved until both parents and educators realize more fully their exacting responsibilities in this matter and work together earnestly for its successful accomplishment.

There are several methods by which apprentices may be developed into skilled mechanics, and many agencies available to assist in this process. It would seem to be the duty of the various school committees to earnestly co-operate with the local commissions on apprenticeship in each city or community wherever such commissions exist in order that the best use of such helpful resources may be obtained. It is the opinion of the writer that thoroughly trained mechanics will best be developed through practical training on construction work, or in the shops related thereto, with parallel instruction at the same time in the necessary theoretical and technical branches of their training at day or evening public trade schools, but preferably public day schools.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Co-operation in Soviet Russia

A VOLUME has been compiled by the International Labour Office entitled "Co-operation in Soviet Russia," which gives a complete and objective description of the development of the Russian co-operative movement from the end of 1917 to the beginning of 1925. It is based mainly on official sources and on co-operative publications. It outlines the theory and practice of the Soviet Government in regard to co-operation, and of the position occupied by co-operation and the part played by it in Russian economic life. Under the Communist régime, co-operation underwent a profound transformation, and became part of the economic machinery of the State. New duties were assigned to it and, with the political and financial aid of the Government, it had an important share in the task of applying Communist principles. When the new economic policy was adopted, in 1921, it was applied to co-operation equally with other branches of the national economic system. Under the new policy—called by Lenin "state capitalism"—co-operative activities were to be based on entirely fresh principles, including a return to voluntary membership and the cessation of state financial support.

The role of co-operation under the new conditions, particularly in connection with nationalized industry, was one of considerable importance, and the co-perative movement as a whole developed greatly. Numerous defects, however, in the organization and working of co-operation became apparent, and the last two years have been mainly taken up with the carrying out of the necessary reforms.

Industrial Safety Survey

The fourth number of the Industrial Safety Survey, which is issued every two months by the International Labour Office, has been published recently. This number contains an article on Springless mechanical interlocks for doors of elevator shafts, with diagrams. Short reports are given of the activities of safety institutions and associations in Belgium, Canada, France, Hungary, Italy, Switzerland, and the United States. The section devoted to acts and regulations, safety codes and official reports, contains a Belgian order regulating the storage of petrol and petrol essence in underground storage tanks and the sale of these products in Belgium, and another decree concerning general regulations on steam boilers; a German order concerning general principles for the construction, equipment and working of oil fuel machinery on board ship; and regulations dealing with wood-working machinery in South Africa.

Books and publications relating to industrial safety in various countries are reviewed.

Occupation and Health

The second series of brochures of "Occupation and Health," an encyclopaedia of hygiene, pathology and social welfare, has just appeared. The brochures deal with the following subjects: phosphorus—amorphous or red phosphorus—phosphorus compounds; lucifer matches; benzene (benzol); tellurium: nickel carbonyl; litharge; fulminate of mercury.

ANNUAL REVIEW OF EMPLOYMENT IN CANADA, 1925

ACCORDING to returns from employers of labour, tabulated by the Dominion Bureau of Statistics, the year 1925 was characterized by steady recovery in industrial employment; from early in January to the beginning of July there was a period of uninterrupted expansion, during which approximately 105,000 persons were added to the staffs of the reporting firms. The brief setback recorded on Aug. 1 was partly due to shutdowns for holidays and inventories in factories and partly to contractions in highway construction and other industries as work commenced on the harvest. Employment was only slightly quickened on Sept. 1, but there was considerable improvement at the beginning of October. This, in turn, was followed by the usual seasonal losses in November and December, rather aggravated in the former month by the inclement weather that prevailed generally during the autumn and hindered outside construction work. The December losses were, however, the smallest registered on that date since the record began in 1920. As shown in the chart on the opposite page, the 1925 curve commenced at a point lower than in 1924, 1923 or 1921, but by July 1 it had risen above the level of any of the last five years, except 1923. At the beginning of December, however, the curves converged for 1923 and 1925, owing to the fact that employment in the latter part of 1923 had decreased more rapidly than in the year under review.

The working forces of the approximately 5,900 firms reporting averaged 761,131, varying between 690,538 on January 1 and 809,072 on Oct. 1. The index number on the latter date was at its highest point for the year, standing at 98.3. In 1924 the peak of employment was reached on July 1, when the index was 95.9, and in 1923 on August 1 when the index stood at 100.2. During 1925, manufacturing showed marked revival; construction was exceptionally active and trade afforded more employment than in any year since the record began in 1920. Communication and services also registered a very favourable situation as compared with earlier years. Although employment in transportation attained a greater volume towards the end of 1925 than in 1924, it averaged rather lower during the better part of the year. Logging and mining were slacker.

Employment by Provinces

The situation in all provinces was better than in 1924 during the greater part of the year. The index number of employment reached a higher level in British Columbia than elsewhere, with Quebec taking second place in that respect.

Maritime Provinces.—The year began with employment in the Maritime Provinces at a low level, the index standing at 78.5 on Jan. 1. This was succeeded by a series of increases that brought the index to 99.4 on July 1; this was higher than in any month of 1924. The pay rolls covered averaged 65,310 persons during the year. Although curtailment of the very active highroad construction programme begun early in the year resulted in heavy declines from Aug. 1, the situation was better at the end of the year than at the beginning. Employment in coal mining was poor, the protracted strikes affecting the situation greatly. Transportation, trade, construction and maintenance were decidedly busier than in 1924. Iron and steel showed improvement towards the close of the year, but in the earlier months it afforded less employment, as did manufacturing as a whole, and logging.

Quebec.—According to the 1,250 reporting firms, whose staffs averaged 212,643 persons in 1925, employment in Quebec gained continuously from January to October, approximately 39,500 workers being added to payrolls during that period. For six months (May 1 to Nov. 1) the index number was above the base level (Jan., 1920). For the twelve months it averaged 96.2, as compared with 95.8 in 1924 and 95.2 in 1923. Employment in manufacturing was in practically the same volume, on the whole, as in the preceding year; the index was lower in the early part of 1925, but expansion in succeeding months brought it to a point above the 1924 level. The same is true also of mining and transportation. Construction during almost the whole year afforded a great deal more employment, being, in fact, more active than in any year since this record was begun in 1920. Services and trade also registered a better situation than in previous years for which statistics are available.

Ontario.—Employment in Ontario averaged about the same as in the preceding year; the situation early in 1925 was not as good, but improvement in the latter part raised employment to a higher level than in 1924. The index number on Dec. 1, 92.6, was over 11 points higher than on Jan. 1, 1925, and more than 4 points higher than on Dec. 1, 1924. Manufacturing was not as active during the first few months of the year, but

the increases recorded in succeeding reports caused the index number for each month from June 1 to the end of the year to be higher than on the same date in 1924. Trade, services and communication also afforded more employment, but logging, transportation, construction and maintenance and mining did not employ as many workers as in the preceding year. The number of employers making returns in 1925 averaged around 2,700 and their payrolls averaged 315,772.

Prairie Provinces.—Early in 1925, employment in the Prairie Provinces was in considerably less volume than in 1924, but as the year progressed, conditions were reversed, and the situation was a good deal more favourable than in the preceding year. On Jan. 1, 1925, the index was 88.1, or over 6 points lower than on that date in 1924, while on Dec. 1, 1925, it was 97.5, or nearly as many points higher than on Dec. 1 in the preceding year. The average payroll of the 770 firms reporting was 98,563. Although employment in most groups was lower in the first few months of 1925 than in the corresponding months of 1924, improvement in that respect was shown during the spring and summer in manufacturing, communication, construction, services and trade. Transportation in the last quarter was considerably more active, owing to the movement of the exceptionally large crop. Mining was dull throughout the greater part of the year, but employment on Dec. 1 was brisker than on that date in the preceding year.

British Columbia.—Employment in British Columbia was better in 1925 than in any other year since the record was begun in 1920; the situation was more favourable at the opening of the year and steady gains were indicated from Feb. 1 to Oct. 1. During those nine months, approximately 12,700 workers were added to the staffs of the firms reporting, averaging about 650, who employed, on the average, 71,805 persons, as compared with the 1924 average of 68,534 for the employers making returns. Manufacturing as a whole was uniformly more active than in 1924, as were trade, services and communication; construction afforded more employment during the greater part of the year, and transportation showed improvement in the last four months. Mining and logging were, however, duller on the whole.

Index numbers of employment by economic areas since 1921 are shown in Table I.

Employment by Cities

The situation in Montreal, Toronto, Hamilton, Winnipeg and Vancouver was better in 1925 than in 1924, while in Quebec and Ottawa it was not quite so good.

Montreal.—The index number of employment in Montreal was lower during the first six months of 1925 than in the preceding year, but improvement in that comparison was indicated during the second six months. The index number for the year averaged 93.0, as against 91.8 in 1924. Manufacturing was slacker until the autumn, but the improvement recorded in that comparison during the last four months caused the index to be nearly five points higher on Dec. 1, 1925, than on the same date in 1924. Trade and construction were very active, and transportation and communication reported a greater volume of employment during the year. The payrolls of the firms reporting averaged 105,713.

Quebec.—Employment in Quebec was moderately active during 1925 but the situation was not as good at the end of the year as in 1924. The record was only begun in August of that year, so that earlier comparisons are not possible. Transportation was more fully employed, but construction and manufacturing were on the whole, slacker.

Toronto.—As in the past three years, employment in Toronto during 1925 reached its highest level on Dec. 1, when the index was 90.9, as compared with 82.2 on Jan. 1, and 87.4 on Dec. 1, 1924. There were only two general declines during the year (on Mar. 1 and June 1), important gains being registered in the other months, except on Nov. 1, when no change was indicated. The payrolls of the firms making returns average 93,413. Manufacturing was more active than in 1924 in all except the first quarter of 1925; construction and trade, with few exceptions, afforded more employment than in the preceding year. Transportation, on the other hand, was generally slacker, as were the communication industries, except during the first and last two months of the year, when the index was higher than on the corresponding dates of 1924.

Ottawa.—In spite of some large projects undertaken in Ottawa and vicinity during 1925, employment in the city, as indicated by over 125 employers having an average working force of 9,892 persons, was less active than in 1924. Manufacturing and construction in the first part of the year employed smaller working forces, but from the early summer improvement was noted. The number of persons reported in trade averaged about the same as in 1924.

Hamilton.—Almost continuous increases in employment were reported in Hamilton during 1925, there being only two general reductions since Jan. 1; these were on Aug. 1 and

Nov. 1, but neither was large. The index number gained almost 12 points in as many months, standing at 88.7 on Dec. 1, 1925, as compared with 77.0 on Jan. 1, 1925, and with 77.3 on Dec. 1, 1924. Statements were received monthly from approximately 200 employers, whose staffs averaged 25,343 during 1925. Although employment in manufactures, which constitutes over 85 p.c. of the total reported in Hamilton, was lower in the earlier months of 1925 than in 1924, recovery was indicated from June 1, and the index number in those industries on Dec. 1 stood at 85.3, while on that date in the preceding year, it was 74.1. Textiles and iron and steel, very important industries in Hamilton, both reported a more favourable situation than in the preceding year, while some other manufactures also showed improvement; electrical appliance works, on the other hand, were not so fully employed.

Windsor.—The record for Windsor and the Border Cities was only begun on July 1; the payrolls of the reporting firms averaged 9,307 for the six months. There was a large loss in employment on Aug. 1, owing to the temporary closing of automobile works, but a renewal of activity was recorded in the following months.

Winnipeg.—The period from Apr. 1 to Nov. 1, 1925, was one of steady expansion in Winnipeg, according to some 285 employers having an average working force of 24,335 persons. The index number, at its peak on the latter date, stood at 92.5, as compared with the 1924 high level of 86.4 on Sept. 1; it averaged 86.5 for the twelve months in 1925, or two points higher than the 1924 average. Manufacturing maintained a steadily upward movement during the greater part of the year, and from early in the spring, afforded more employment than in the preceding year. Construction was much more active; transportation showed improvement in the last few months of 1925, and trade, which reported approximately 40 p.c. of the total number of employees covered in Winnipeg, was, on the whole, decidedly brisker.

Vancouver.—Employment in Vancouver showed substantial gains during 1925, the index number rising from 98.3 on Jan. 1 to 113.9 on Oct. 1. This is the highest point reached in any month since the record was commenced in 1920; the previous high level was 104.3 on Sept. 1, 1923. Manufacturing, notably of lumber products, was very active as compared with recent years. Communication, services and trade also recorded a uniformly better situation than in 1924 or 1923. Employment in construction was slacker during the greater part of the year than in 1924 but from Oct. 1 showed improvement in that comparison; the same is true also of transportation from Aug. 1. Monthly statistics were received from over 235 Vancouver employers, representing on the average, 23,193 workers in 1925.

Index numbers by cities are shown in Table II.

Employment by Industries

MANUFACTURING

The number of persons covered by returns from the reporting manufacturers averaged 423,028 in 1925, as compared with 421,173 in the preceding year. The situation was less favourable than on the corresponding date of 1924 each month from Jan. 1 to May 1, but the steady increases that had been indicated from month to month during that period brought the curve of employment in manufactures to the same level as on June 1, 1924. Subsequent gains caused it to be higher for the remainder of the year, the index number at 88.1 on Dec. 1, being 6 points higher than on that date in 1924. Although most industries within the manufacturing group displayed less activity during the first few months of 1925 than in 1924, recovery was soon indicated, and with very few exceptions, they all afforded greater employment at the end of the year. The iron and steel, lumber and pulp and paper divisions are notable examples of this revival in trade, which is also illustrated in the course of employment in the textile industries. These, however, began the year only a little lower than in 1924.

Animal Products—Edible.—The situation in this division was better than in any previous year of the record. Fish and meat preserving establishments and dairies all showed heightened activity. The peak of employment was reached on Aug. 1, when the index was 105.7, while in 1924 it was 101.3 on July 1. The number of persons employed in the reporting firms varied between 12,500 on Mar. 1 and 16,400 on Aug. 1.

Leather and Products.—Employment in leather factories showed considerable fluctuations, but continuous recovery was indicated in the last five months of the year, which brought the index on Dec. 1 to a point very slightly above its level of the same date in 1924. Between 15,200 and 16,600 workers were covered by the leather manufactures making returns, most of whom were engaged in boot and shoe factories.

Lumber Products.—The trend of employment was steadily upward between Feb. 1 and Aug. 1, but beginning with September, the

usual seasonal losses were indicated. From May 1, the index was higher than in 1924; it averaged 96.8 in 1925 as compared with 94.7 in the preceding year. On Jan. 1, 35,133 workers were reported by the employers whose statistics were received; this was increased monthly until, at the peak of employment on Aug. 1, 58,300 men had work in the mills covered; the average was 48,392.

Plant Products—Edible.—The industries coming under this heading reported a generally higher level than in 1924; sugar refineries, bread, biscuit, chocolate and confectionery factories, in particular, showed improvement. The payrolls of the reporting firms ranged between 24,125 on Feb. 1 and 31,753 on Oct. 1.

Pulp and Paper.—Pulp and paper mills provided work for a greater number of persons in 1925 than in the preceding year, while printing and publishing establishments also registered more activity on the whole. Uninterrupted expansion was noted from Feb. 1 to July 1; employment fluctuated during the remainder of the year, but the index on Dec. 1 stood at 102.4, as compared with 98.5 on that date in 1924. An average working force of 51,327 persons was employed by the companies making returns in 1925.

Rubber Products.—Employment in rubber factories increased generally from Feb. 1 to Dec. 1, 1925, with only one exception—on Nov. 1, when a shutdown for repairs caused reductions in staff. The index number rose from 70.3 on Jan. 1 to 93.9 at the beginning of December; the latter was higher than at any time since the middle of 1920. This industry is very largely centred in Quebec and Ontario, both of which provinces shared in the improvement during the year. Some 30 manufacturers reported payrolls varying between 10,100 at the first of the year and 13,400 on Dec. 1.

Textile Products.—During the first three months of 1925 employment in textiles showed a revival that brought the index number above its level of the corresponding months of the preceding year. On May 1 and June 1, there were moderately large reductions, mainly of a seasonal character, followed by steady increases during the remainder of the year. On Dec. 1 the index was 90.8, nearly 11 points higher than on Jan. 1, 1925, and over 8 points higher than on Dec. 1, 1924. Cotton, woollen and knitting mills recorded greater activity than in 1924, while the index number of employment in garment factories averaged about the same. Between 61,800 and 70,400 workers were employed by the firms reporting in the textile industries.

Tobacco, Distilled and Malt Liquors.—Improvement over 1924 and also as compared with 1923 was indicated in this group, towards the middle and end of 1925, although the situation was less favourable in the first few months of the year. The payrolls of the employers making returns varied from some 8,800 on Jan. 1 to 12,100 on Dec. 1; the index averaged 97.3 while in 1924 it was 97.4.

Clay, Glass and Stone.—In spite of the fact that construction afforded considerably more employment in 1925, conditions reported in the building material industries were not as good as in 1924, in which there was a falling off from 1923. An average index of 82.7 was reported, as against the average of 93.9 in the preceding year. There were seasonal increases during the spring and summer which caused the payrolls of the companies whose statistics were received to rise from 6,600 on Feb. 1 to 9,300 on July 1. From this peak, employment declined until the end of the year, but on Dec. 1 the index at 89.3 was some 8 points higher than on the same date of the preceding year.

Electric Current.—Employment in electric current works was maintained on a higher level than in preceding years of the record, largely a result of the progressive gains, indicated since 1922, together with the improvement shown during last summer. Working forces that fluctuated between 11,300 on Mar. 1 and 13,000 on Aug. 1 were registered by the reporting employers.

Electrical Apparatus.—Following the marked activity of 1924 in this division (which includes a number of radio manufacturers) there was a tendency for employment to slacken during 1925, many more decreases than increases being recorded. The index on Dec. 1, standing at 119.6, was slightly lower than on the same date of the preceding year. The payrolls of the reporting firms averaged 9,038.

Iron and Steel.—During the better part of 1925, employment in the iron and steel group was lower than in the preceding year, but from the beginning of September, improvement in that respect was indicated. The index number, however, averaged lower at 71.5 in 1925, compared with 74.0 in 1924. It is noteworthy that employment in the year under review increased steadily from Feb. 1 to May 1, a longer period of uninterrupted revival than had previously been indicated since the record was instituted in 1920. Fluctuations were noted during the remainder of the year, but employment was, on the whole, fairly well maintained, and on Dec. 1 the index was 74.7 as against 66.4 at the begin-

ning of December, 1924. Payrolls averaged 110,245, varying between 92,400 on Jan. 1 and 116,000 on May 1, when the index was 75.0. Agricultural implements, in the last half of the year, and crude, rolled and forged products and land vehicles in the last four months, registered greater activity than in 1924. General plant machinery and heating appliance plants, shipyards and practically all other divisions of the iron and steel group also reported a better situation towards the close of the year.

Non-ferrous Metal Products.—With very few exceptions, the trend of employment in the non-ferrous metal industries was upward during 1925. Gold, copper, lead, zinc and other works recorded revival. A working force that averaged 11,115 was reported by the employers making returns.

Non-metallic Mineral Products.—Employment in this division increased considerably during 1925, causing the situation to be rather better than in any year since the record was begun in 1920. The index number averaged 105.0, as compared with 102.5 in 1924, while payrolls ranged between 8,950 on Jan. 1 and 10,300 on Aug. 1. Petroleum and gas plants showed improvement.

Other Manufacturing Industries.—On the whole, employment in fur, musical instrument, chemical and wood distillate and extract works was on a lower level than in 1924, although the first two gained towards the end of the year.

Logging

The number of persons employed in logging camps was smaller than in 1924, in which year and 1923 very large cuts were made. The index averaged 58.4, as compared with an average of 64.6 in the preceding year. The working force of the firms furnishing returns varied between the high mark of 34,600 in February and the low mark of 13,200 on Aug. 1, averaging 23,154.

Mining

Mining as a whole was slacker during 1925. In *coal mines*, the prolonged strikes at various times during the year affected the situation considerably, while the increasing use of hydro-electric power in industrial undertakings may be reflected in the smaller quantities of coal produced. The reporting operators had an average working force of 24,928; the index averaged 79.9, as compared with 88.2 in 1924. In *metallic ore mines*, the index was slightly higher during the better part of the year, averaging 151.1, as against 148.9 in 1924. The payrolls reported fluctuated between 13,000 on Jan. 1, and 14,100 on July 1, Considerable expansion was indicated between those months in both Ontario and British Columbia. In *non-metallic minerals (other than coal)*, the situation generally was better than in 1924 or 1923, although the index was lower during the first months of 1925. Substantial improvement, however, was shown during the summer. Between 4,500 and 6,900 persons were employed in the quarries, asbestos mines and other industries coming under this heading.

Communication

Employment was well maintained in the telephone and telegraph divisions, the index averaging 111.1 in 1925 as compared with 109.0 in 1924. Between 21,800 and 24,200 employees were reported in these industries.

Transportation

Steady expansion was registered in the transportation industries between Apr. 1 and Nov. 1, but until the beginning of September, employment was in slightly smaller volume than in 1924. The index averaged 104.6 in 1925, or 1.3 points lower than the average for the preceding year. *Street railways and cartage* reported, on the whole, the same volume of employment. Some 18,800 persons, on the average, were engaged in local transportation during the year. *Steam railway operation* gave employment to a rather smaller number of persons until September, when the commencement of the crop movement caused activity to increase and to be maintained at a higher level than in 1924. The average for the year, however, was slightly lower, standing at 95.8 as against 98.9 in the preceding year. Personnel varied between 70,800 on May 1 and 77,600 on October 1. In *shipping and stevedoring*, conditions were somewhat better: there were the usual pronounced fluctuations in employment during the year, but on the whole, the trend was favourable. The number of persons covered by the reporting firms varied between 8,700 on Feb. 1 and 16,100 on Nov. 1.

Construction and Maintenance

Employment in construction was in greater volume than in any other year since the record was established in 1920; the index number averaged 138.4 as compared with 130.8 in 1924. At the peak of employment on July 1 96,500 workers were reported by the contractors making returns; the smallest staff was on Jan. 1, approximately 47,700 men. In *building construction* there was steady expansion from Mar. 1 to Oct. 1, and the index on that date stood at 148.6, as compared with

135.4 at the beginning of October, 1924. In *highway construction*, very pronounced gains took place in the spring and early summer: subsequent contractions reduced employment to some extent, but many more men were employed on roads at the end of 1925 than in any previous year of the record. In *railway construction*, the index number averaged 111.9 as compared with 114.4 in the preceding year. At the end of 1925, however, the

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY DISTRICTS.

NOTE.—The number employed by the reporting firms in January, 1920, is taken as 100 in every case.

—	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia	Canada
1921						
January 1	95·9	88·3	83·4	95·7	86·6	87·7
February 1	96·3	90·4	88·1	93·7	87·2	90·1

Relative weight of employment by economic areas as at December 1, 1925	7·9	27·7	41·9	13·2	9·3	100·0

index at 96.3 was over 4 points higher than on Dec. 1, 1924. Working forces rose from 24,600 on Jan. 1 to 46,900 on July 1.

SERVICES

Considerable activity was shown in the service group, hotels and restaurants, laundries and other industries reporting gains. The number of persons employed by the firms making returns increased from 12,900 at the beginning of the year to 15,300 on Sept. 1. Seasonal losses were recorded during the last three months of 1925, but the index was slightly higher on Dec. 1 than on that date of 1924.

TRADE

Employment in trade attained a higher level than in any other year of the record. The index stood at 103.9 on Dec. 1, this was

Relative weight of employment by cities, as at December 1, 1925	14·1	1·0	12·5	1·2	3·4	1·3	3·3	3·1

NOTE.—The number employed by the reporting firms in January, 1920, is taken as 100 in every case. The "relative weight" in Tables I, II, and III, shows the proportion of employees in the indicated district or industry to the total number of employees reported in all districts and industries on the date indicated. In Tables IV and V it shows the relative importance of the indicated industry within the specified area.

higher than in any other month in the last four years. In 1925 the index averaged 95.8, as compared with 93.3 in 1924. The personnel in trading establishments varied between 55,000 on Mar. 1 and 61,600 on Dec. 1. Employment increased uninterruptedly from

*For explanation of term "relative weight," see page 50.

THE EMPLOYMENT SITUATION AT THE BEGINNING OF DECEMBER, 1925, AS REPORTED BY EMPLOYERS TO THE DOMINION BUREAU OF STATISTICS

FURTHER seasonal losses in employment were noted at the beginning of December, but the contractions, which caused the release of 16,169 persons by the 5,869 reporting firms, were the smallest registered on that date since the record began early in 1920, with the exception of those in 1922. The number of persons employed by these firms on December 1, was 782,903; the index stood at 95.3, as compared with 97.1 in the preceding month, and with 90.8, 95.7, 95.1 and 87.2 on December 1, 1924, 1923, 1922 and 1921, respectively. The accompanying chart illustrates the course of employment in the past five years. Although employment in 1925 did not quite reach the 1923 level, the curves for the two years practically converged on December 1; they were both slightly higher than the 1922 line and considerably above the 1924 and 1921 curves.

At the beginning of December, 1925, the most pronounced reductions were in construction and manufacturing, while important increases were reported in logging and trade. The increases, like the declines, were largely of a seasonal nature.

Employment by Provinces

All provinces recorded reduced employment, the curtailment being most extensive in Quebec and Ontario.

Maritime Provinces.—The decreases registered in the Maritime Provinces were less than half as great as those noted on December 1, 1924, when the level of employment was several points lower. According to 504 employers, their staffs aggregated 61,624 persons, as compared with 63,124 at the beginning of November. Fish canneries, lumber and rolling mills released employees, while construction also showed important seasonal losses. On the other hand, logging, coal mining, transportation, and trade were seasonally more active.

Quebec.—Further seasonal contractions exceeding those of the same date of last year were indicated in Quebec, where the situation was better than on December 1, 1924. All groups on the whole showed declines, except trade and logging, in both of which there were the large gains customary at this time of the year. The recessions in construction and transportation were most pronounced. Within the manufacturing division, iron and steel and rubber recorded important increases, but lumber mills continued their large scale seasonal reductions. and there were smaller losses in some other industries. Statements were tabulated from 1,271 firms having 216,703 workers, or 5,605 less than in the preceding month.

Ontario.—Employers reporting in Ontario (numbering 2,691) reduced their payrolls from 333,726 on November 1, to 328,105 on December 1. The decreases were less extensive than on that date of either 1924 or 1923; the index number continues to be several points higher than in 1924. Manufacturing recorded curtailment, particularly in the sawmilling and fruit and vegetable canning divisions, while construction also showed marked seasonal losses, and transportation was slacker. On the other hand, textile factories, logging and trade registered large increases, those in the last two industries being seasonal in character.

Prairie Provinces.—Employment in the Prairie Provinces continued to decline, 1,697

persons being released from the working forces of 759 firms reporting 103,356 employees on December 1. Logging, mining, steam railway operation, and trade registered heightened activity, but heavy losses took place in railway and highway construction. On December 1, 1924, somewhat larger reductions were noted, and the index then was below its level at the same date in 1925.

British Columbia.—Manufacturing, chiefly in lumber mills and fish canneries, and highway and railway construction afforded less employment than in the preceding month, while building construction, logging, shipping and trade showed improvement. A combined payroll of 73,115 persons was reported by the 645 firms making returns, who had 74,861 employees on November 1. This contraction is rather less than that noted at the beginning of December, 1924, when the index number was nine points lower.

The following table gives index numbers of employment in the five economic areas into which the country is divided in these statistics:—

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

(Number employed by the reporting firms in January, 1920=100)

District	Relative weight	Dec. 1, 1925	Nov. 1, 1925	Dec. 1, 1924	Dec. 1, 1923	Dec. 1, 1922	Dec. 1, 1921
Maritime Provinces.	7·9	83·5	85·5	79·3	91·2	92·1	89·5
Quebec.....	27·7	98·5	101·1	95·3	98·5	93·9	83·7
Ontario....	41·9	92·6	93·7	88·4	93·4	94·4	85·9
Prairie Provinces.	13·2	97·5	99·1	91·8	99·3	101·5	95·6
British Columbia	9·3	109·0	111·5	100·0	97·8	95·6	88·9
Canada....	100·0	95·3	97·1	90·8	95·7	95·1	87·2

Employment by Cities

Employment in three of the eight cities for which separate tabulations are made—Toronto, Hamilton, and Windsor including the Border Cities—showed heightened activity, while losses were recorded in Montreal, Quebec, Ottawa, Winnipeg and Vancouver.

Montreal.—Improvement in manufacturing (chiefly in iron and steel) and in trade was offset by declines in construction, transportation and services. Within the manufacturing division, the greatest changes were in iron and steel, in which employment increased considerably, and in textile and electric current works, where it declined. Statements were tabulated from 692 employers having 110,608 workers as compared with 113,043 on November 1. This reduction, which was the first to be recorded during 1925, exceeded that noted on the same date of 1924, when the index number was several points lower.

Quebec.—Manufacturing and transportation afforded less employment, while little general change was indicated in other industries. The payrolls of the 86 firms reporting aggregated 7,998, as compared with 8,316 on November 1. Reduced activity was also noted on December 1, 1924.

Toronto.—Large gains in retail trade and smaller increases in manufacturing, chiefly in iron and steel and printing establishments, were partly offset by decreases in construction. A combined working force of 97,750 persons was employed by the 772 establishments making returns; they had 96,856 employees in the preceding month. The improvement recorded at the beginning of December, 1924, was less pronounced, and employment then was on a lower level.

Ottawa.—According to 129 employers of labour in Ottawa, their staffs declined from 10,293 on November 1, to 9,599 on the date under review. Lumber mills and construction registered seasonal shrinkage in employment. The index number was slightly lower than at the beginning of December, 1924.

Hamilton.—Manufactures, especially textile and iron and steel factories, and trade afforded more employment, while there was curtailment in building. Statistics were compiled from 196 firms having 26,949 employees, or 210 more than at the beginning of November. The situation in Hamilton was considerably better than on December 1, 1924; large losses in personnel were indicated on that date.

Windsor and other Border Cities.—Very little change on the whole was reported in the Border Cities, where 79 firms employed 10,213 workers, as compared with 10,161 on November 1. Minor gains in manufacturing and construction caused the increase.

Winnipeg.—After eight months of uninterrupted expansion, employment in Winnipeg showed a falling off at the beginning of December, 225 persons being released from the staffs of the 284 employers furnishing data; they had 25,503 employees. The same number of workers were let out by the firms reporting on the corresponding date of last year, but the index number then was eight points lower than on the date under review.

Vancouver.—Construction and trade were more active, while there were declines in manufacturing, chiefly in lumber mills and in transportation. The result was a reduction of 83 workers in the staffs of the 236 firms whose returns were received; they had 24,288 employees on December 1, 1925. More extensive curtailment was indicated on that date in 1924, and the situation then was less favourable.

The following table gives index numbers of employment by cities. The column headed "Relative Weight" in this table shows the proportion that the number of employees reported in each of the indicated cities is of the total number of employees reported in Canada by the firms making returns on December 1, 1925.

TABLE II.—INDEX NUMBERS OF EMPLOYMENT BY CITIES
(Number employed by the reporting firms in January, 1920 =100)

City	Relative weight	Dec. 1, 1925	Nov. 1, 1925	Dec. 1, 1924	Dec. 1, 1923	Dec. 1, 1922
Montreal	14·1	97·0	99·3	93·1	93·6	94·7
Quebec	1·0	94·4	99·4	98·5	.....	.....
Toronto	12·5	90·9	89·7	87·4	90·2	92·9
Ottawa	1·2	90·4	96·8	92·3	94·3	98·6
Hamilton	3·4	88·7	87·7	77·3	88·5	88·2
Windsor	1·3	93·3	92·9	.....	.....	.....
Winnipeg	3·3	91·5	92·5	83·5	88·2	97·8
Vancouver	3·1	110·7	112·0	104·0	98·1	90·7

Manufacturing Industries

Statements were received from 3,771 manufacturers having 432,933 operatives, as compared with 439,654 on November 1; this loss of 6,721 workers was smaller than in the preceding month and also than that recorded on December 1, 1924, when some 11,800 persons were released by the firms reporting; the index was then about six points lower. Lumber mills, fish, fruit and vegetable canneries and mineral product works registered further seasonal curtailment, and electric current employers laid off employees. On the other hand, boot and shoe, rubber, textile and iron and steel factories showed decided improvement.

Animal Products. Edible.—Further losses were recorded in fish canneries, smoking and curing establishments, while little change was shown in other branches of this division. The working force of the 159 employers making returns aggregated 14,575, as compared with 15,294 at the beginning of November, 1925. The shrinkage took place in the Maritime Provinces and British Columbia. On December 1, 1924, less extensive decreases were indicated, but the index number was lower.

Leather and Products.—Further additions to staff were made by the 192 manufacturers of leather products whose statistics were tabulated and who employed 16,639 persons; this was 241 more than in the preceding month. Boot and shoe factories registered practically all the gain, which was mainly reported in the Maritime Provinces, Quebec and Ontario. Minor declines were noted on December 1, 1924, when the index number was insignificantly lower.

Lumber and Products.—Seasonal curtailment in lumber mills continued to cause pronounced reductions in employment in this industry. There were gains in furniture factories, but on a much smaller scale than were the decreases already mentioned. The payrolls of the 716 manufacturers reporting stood at 42,699, as compared with 49,724 on November 1. All provinces shared in the shrinkage, that in Ontario, being most extensive. Losses were also recorded on December 1, 1924, but the level of employment then was rather lower.

Plant Products, Edible.—The trend of employment in this group continued to be unfavourable, although the declines were much smaller than on November 1, 1925. They were, however, somewhat larger than those noted at the beginning of December, 1924, when the index number was not quite as high. According to 308 firms, their staffs declined from 29,002 at the beginning of November to 28,317 on December 1. The most pronounced curtailment was in fruit and vegetable canneries, while starch and glucose factories showed improvement. The largest declines were in Ontario.

Pulp and Paper Products.—Varying conditions in the pulp and paper group produced a net increase of seven persons in the staffs of the 452 employers reporting, who had 52,100 on their payrolls. Pulp and paper mills released workers, but printing and publishing establishments were busier. Very little general change was shown in any province. Employment on December 1, 1925, was in greater volume than on that date in the preceding year, when large reductions were indicated.

Rubber Products.—Pronounced increases in employment were registered in rubber at the beginning of December, partly representing recovery from the temporary losses in the preceding month. The index number was very much higher than on December 1, 1924, when improvement was also noted. Practically all the additions to staffs were made in Quebec. An aggregate working force of 13,397 persons was reported by the 29 firms making returns, who had 12,562 employees on November 1.

Textile Products.—There were fluctuations in employment in the textile division, producing a net increase of 428 persons in the payrolls of the 517 manufacturers making returns; they had 70,434 workers on December 1. Cotton, woollen, hosiery and knitting and headwear factories recorded increased activity, but garment mills were slacker. Ontario firms reported the bulk of the gain. Pronounced reductions in employment were

indicated on December 1, 1924, when the index number stood at 82.5 as compared with 90.8 on the date under review.

Electric Current.—According to 89 producers of electric current, their staffs fell off by 613 persons to 11,597 on December 1. The largest losses were in Quebec and Ontario. Curtailment on a much smaller scale was noted on the same date of 1924, and the index number then was a good deal higher.

Iron and Steel Products.—Rolling mills registered a large reduction in personnel, but agricultural implement, railway car and steel shipbuilding factories were considerably busier. Statements were tabulated from 637 employers having 114,641 persons in their employ, as against 113,722 on November 1. The trend of employment on the same date of last year was downward; the index number then was over eight points lower. On the date under review, the improvement took place chiefly in Quebec, although employment in iron and steel was also more active in the Western Provinces.

Mineral Products.—A further reduction in employment, that repeats the contraction indicated on the same date in 1924, was reported on December 1, 1925. Statistics were compiled from 77 employers having 9,621 workers, or 281 less than at the beginning of November. The reductions, which were fairly generally distributed over the country, were reported chiefly in petroleum products. The situation was better than on December 1, 1924.

Logging

According to returns from 225 logging camps, they gave employment to 30,625 men, as compared with 26,587 on November 1. This increase is somewhat smaller than the expansion indicated at the beginning of December, 1924, and the index number then was higher. All provinces shared in the improvement indicated on the date under review, but the gains in Ontario constituted more than half of the total increase.

Mining

Coal.—Further additions to staffs were made in both eastern and western coal-fields, those in Alberta being most marked. Returns received from 88 operators showed that they employed 26,530 persons, as compared with 25,171 in the preceding month. This increase exceeded that noted on December 1, 1924, but the index number then was slightly higher than on the date under review.

Metallic ores.—Employment in metallic ore mines declined, chiefly in British Columbia; 200 persons were let out by the 45 employers reporting, who had 11,172 workers. Reductions on practically the same scale were registered at the beginning of December, 1924, when the index number was rather higher.

Non-metallic minerals, other than coal.—There was a further and general decrease in employment in this industry at the beginning of December, largely in quarries, but also in asbestos mines in Quebec. The shrinkage was slightly less than that noted on the same date of 1924; the index number then stood at 89.8 as compared with 97.3 on December 1, 1925. The payroll of the 71 firms making returns stood at 6,006; this was 346 less than in the preceding month.

Communication

A further moderate contraction in employment in the communication industries was noted at the beginning of December, when 134 persons were released from the staffs of the 178 companies or branches making returns. Their payrolls aggregated 23,426. There were minor losses on telephones and telegraphs, in which most of the provinces shared. The situation is rather better than on the same date of 1924, employment then also having shown a decrease.

Transportation

Street railways and cartage.—Statements were tabulated from 115 firms in this group having 19,178 employees, as compared with 19,726 in the preceding month. The reduction took place largely in Quebec. Somewhat smaller losses were reported on December 1, 1924; the index number then, however, was only slightly higher than on the date under review.

Steam railways.—Further though smaller reductions in employment were noted on December 1, 1925. The shrinkage was very much less extensive than at that time in 1924, when the index number was several points lower. A combined working force of 76,892 persons was reported by the 102 employers making returns for the date under review, as compared with 77,166 on November 1. There were large reductions in Ontario and smaller losses in Quebec, but considerable improvement was indicated in the Western Provinces.

Shipping and stevedoring.—In spite of considerable additions to staffs in the Maritime Provinces and somewhat smaller gains in British Columbia, there was a net contraction in the employment afforded in this group at the beginning of December, on account of seasonal curtailment in Quebec. Substantial increases were recorded on December 1, 1924,

when the index number was practically the same as on that date in 1925. The working forces of the 58 reporting employers declined from 16,073 on November 1 to 15,200 at the beginning of December.

Construction and Maintenance

Continued and pronounced curtailment of outside work caused important losses in employment in construction and maintenance. Building, highway and railway construction all registered reduced activity, the losses in the last-named being most extensive. Firms in all provinces recorded declines, except that building construction afforded more employment in British Columbia than in the preceding month. Statements compiled from 465 employers in the construction industries showed that they had 65,776 workers, as compared with 80,046 on November 1. This reduction is a good deal smaller than that recorded on December 1, 1924; the index number stood at 128.3 on that date under review, while on the former date it was 116.6.

Services

Hotels and restaurants continued to release employees, while little general change was shown in other branches of the service group.

TABLE III—INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES. (Jan. 1920 = 100)

Industry	Relative weight	Dec. 1, 1925	Nov. 1, 1925	Dec. 1, 1924	Dec. 1, 1923	Dec. 1, 1922	Dec. 1, 1921

Personal (chiefly laundries)	0·6	105·9	107·1	102·0	99·7	94·5	95·2
Trade	7·9	103·9	100·0	99·1	96·8	97·0	96·3
Retail	5·3	106·5	100·5	99·9	96·5	97·1	95·7
Wholesale	2·6	99·1	99·0	97·7	97·5	96·8	97·5
All industries	100·0	95·3	97·1	90·8	95·7	95·1	87·2

According to 177 firms, they employed 13,519 workers, or 425 less than on November 1. Although this decrease exceeds that noted on the same date of 1924, the index number was very slightly higher on December 1, 1925.

Trade

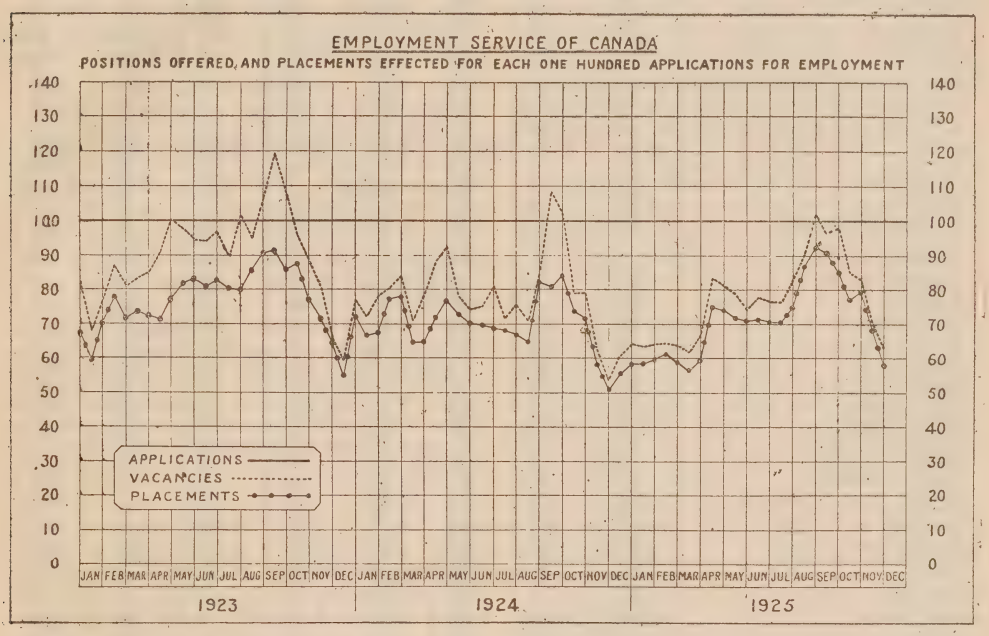
Further seasonal improvement was noted in retail trade, while there were very slight declines in wholesale establishments. Reports were compiled from 574 trading establishments having 61,646 employees, as compared with 59,421 on November 1. Trade during the last few months has been more active than in recent years. The index number on December 1 stood at 103.9 as compared with 99.1, 96.8, 97.0, and 96.3 on December 1, 1924, 1923, 1922 and 1921, respectively. Considerable improvement was also registered on December 1 of those years, to meet the requirements of the holiday buying.

The accompanying table gives index number of employment by industries as at the first of November and December, 1925, as compared with December 1 of the last four years. The columns headed "Relative Weight" in the tables in this article show the proportion that the number of employees reported in the indicated area or industry bears to the total number of employees reported in Canada by the firms making returns on December 1, 1925.

EMPLOYMENT OFFICE REPORTS FOR NOVEMBER, 1925

A DECREASE of 26 per cent in the volume of business transacted was reported by the offices of the Employment Service of Canada during the month of November, 1925, this decline being mainly attributable to the usual slackening in out-of-door activities, farming and construction in particular, which takes place at this season of the year. A gain, however, of over 12 per cent was recorded when the records were compared with the average daily placements effected during November, 1924.

The accompanying chart shows the trend of employment since January, 1923, as represented by the ratio of vacancies offered and placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen that although the curves of vacancies and placements in relation to applications declined sharply throughout the month, at the close of the period the levels maintained by both were several points higher than those shown at the close of the corresponding period of 1924. The ratio of vacancies to each 100 applications was 70.7 and 63.0 during the first and second half of November, in contrast with the ratio of 63.0 and 53.7 during the same period in 1924. The ratio of placements to each 100 applications during the period under review was 68.5 and 58.3 as compared with 58.9 and 50.7 during the corresponding month of the year 1924.



A summary of the reports from the offices showed that the average number of applications reported during the first half of November, 1925, was 1,813, as compared with 1,801 during the preceding period, and with 1,721 daily in the corresponding period in 1924. Applications for work during the latter half of the month registered 1,602 daily in contrast with 1,619 during the latter half of November a year ago. Employers notified the Service of a daily average of 1,282 vacancies during the first half and 1,010 during the latter half of the month under review as compared with a daily average of 1,084 and 869 vacancies during the month of November, 1924. Vacancies offered to the Service during the latter half of October, 1925, averaged 1,495 daily. The Service effected an average of 1,242 placements during the first half of November, of which 891 were in regular employment and 351 in work of one week's duration or less, as compared with the total average placement during the preceding period of 1,429 daily, and with 1,014 daily during the first half of November, 1924. During the latter half of the month under review placements averaged 934 daily (640 regular and 294 casual) as compared with an average of 820 daily during the corresponding period a year ago.

During the month of November, 1925, the offices of the Service referred 27,215 persons to vacancies and effected a total of 25,796 placements. Of these the placements in regular employment were 18,113, of which 14,902 were of men and 3,211 of women, while the placements in casual work totalled 7,683. The number of vacancies reported by the employers numbered 19,626 for men and 7,585 for women, a total of 27,211, while applications for work totalled 40,766, of which 30,995 were from men and 9,771 from women.

The following table gives the placements effected to date in the offices of the Employment Service of Canada:—

Year	Placements		
	Regular	Casual	Totals
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924.....	247,425	118,707	366,132
1925 (11 months).....	293,565	98,737	392,302

effected in Nova Scotia were manufacturing, 91; logging, 81; construction and maintenance, 84; services, 115 and trade, 64 and in New Brunswick manufacturing, 67; logging, 91; construction and maintenance, 51 and services, 454, of which 286 were household. During the month of November 234 men and 52 women were placed in regular employment through Nova Scotia offices and 205 men and 79 women through offices in New Brunswick.

MARITIME PROVINCES

Opportunities for employment in Nova Scotia and New Brunswick during the month of November were about 18 per cent less than in October and over 8 per cent less than during November 1924. Nova Scotia offices listed about 20 per cent more vacancies during November than in the corresponding month of 1924, but this increase was more than offset by a reduction in employment offered through New Brunswick offices. Nova Scotia offices made nearly 11 per cent fewer placements than in October but over 19 per cent more than during November 1924. Placements by New Brunswick offices during November were more than 18 per cent below October and more than 4 per cent less than during November 1924. There was a net increase in placements effected by Nova Scotia and New Brunswick of about 4 per cent when comparing the month under review with the corresponding month of 1924. Industrial groups in which most of the placements were

QUEBEC

There was a decline of over 22 per cent in the number of orders received by Quebec offices during November when compared with the preceding month, but a gain of more than 98 per cent in comparison with the corresponding month of 1924. Placements were 19 per cent less than in October, but about 83 per cent in excess of November 1924. All industries participated in the gains recorded over November 1924, those in the manufacturing industries and building construction being the most pronounced. Industrial groups in which most of the placements were effected during the month were manufacturing, 230; logging, 615; building construction, 523 and services, 754. Placements in regular employent numbered 1,560 of men and 680 of women.

ONTARIO

Orders listed at Ontario offices during the month of November were nearly 28 per cent

*11 placements effected by offices since closed.

less than during October, but about 14 per cent higher than during November 1924. Placements decreased over 21 per cent from October, but were more than 19 per cent in excess of November 1924. The most noteworthy gains over November 1924 occurred in the manufacturing industries, farming, transportation and construction and maintenance. Placements by industrial groups included manufacturing 1,335; logging, 2,143; farming, 899; transportation, 662; construction and maintenance, 2,049; services, 2,787 and trade, 323. Regular employment was secured for 6,020 men and 1,060 women.

MANITOBA

During November the number of orders received was nearly 41 per cent less than in October and slightly over one per cent less than during November 1924. Placements were nearly 43 per cent below October and over 8 per cent less than during November 1924. The reductions under the latter comparison were due to decreased demand for farm and bush workers, offset in part by increased orders for workers in the trade and services group. Industrial groups in which most of the placements were effected were manufacturing, 122; logging, 874; farming, 581; construction and maintenance, 116; services, 1,554 and trade, 199. Placements in regular employment numbered 1,548 of men and 489 of women.

SASKATCHEWAN

Orders received at Saskatchewan offices during November were over 36 per cent less than during October, but more than 26 per cent higher than during November 1924. Placements were nearly 34 per cent fewer than in October but nearly 33 per cent above November 1924. Increased demand for farm and bush workers accounted for nearly all the improvement recorded over November 1924. Placements by industrial groups included logging, 1,042; farming, 1,081; construction and maintenance, 148 and services, 664. There were 2,020 men and 315 women placed in regular employment during the month.

ALBERTA

Vacancies and placements during November were approximately 56 per cent less than during October, but about 16 per cent more than during November 1924. The increase in the latter comparison occurred chiefly in logging and farming, offset in part by reduced demand under services and trade. Industrial groups in which most of the placements were effected were manufacturing, 126; logging, 482; farming, 1,467; mining, 180; construction and maintenance, 206; services, 600 and trade 89. Placements in regular employment numbered 2,418 of men and 282 of women.

BRITISH COLUMBIA

There was a decrease of about 42 per cent in the number of orders received and placements effected during November when compared with October, but gains of approximately 9 per cent in comparison with November 1924. All industrial divisions participated in the gains over November 1924 except logging and transportation, the change in the latter group being nominal only. Industrial groups in which most of the placements were effected during the month were manufacturing, 243; logging, 326; mining, 73; farming, 83; transportation, 99; construction and maintenance, 330; services, 909 and trade, 85. Regular employment was secured for 897 men and 254 women during the month.

Movement of Labour.

During November, 1925, the offices of the Employment Service of Canada made 18,113 placements in regular employment of which 11,306 were persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 2,838 were granted the Employment Service reduced transportation rate, 2,077 going to points within the same province as the despatching office and 761 to other provinces. The reduced transportation rate which is 2.7 cents per mile with a minimum fare of $4 is granted by the railway companies to *bona fide* applicants at the employment service who may desire to travel to distant employment for which no workers are available locally.

The Sydney, Nova Scotia, office transferred one bushman to the Quebec zone. In Quebec 104 certificates were granted, 51 provincial and 53 interprovincial. Of the provincial transfers Quebec City despatched 23 bushmen and 7 cooks and Montreal 21 bushmen to points within their respective zones. To employment at a distance, Montreal transferred 15 bushmen to Sault Ste. Marie and Hull 38 bushmen to Cobalt. From the Ontario offices 745 workers were granted the special reduced rate, 56 of whom were railway construction labourers destined to Hull and sent by the Port Arthur, North Bay, Cobalt and Sudbury offices. In addition Ottawa despatched two bushmen to Hull and Pembroke one plasterer. Of the provincial transfers 655 were bushmen going to camps near North Bay, Pembroke, Sudbury, Peterboro, Hamilton, Fort William and Port Arthur, 9 were carpenters, 18 construction labourers, and 1 clerk going from Fort William and Port Arthur to points within their own zones, 2 were rubber workers sent by the Pembroke office to Kitchener, and one a weaver travelling from Windsor to the Nia-

gara Falls zone. The number of reduced rate certificates issued in Manitoba was 679. From Brandon 21 bushmen went to Dauphin. The Winnipeg office transferred 87 farm labourers, 5 hotel workers, 3 farm generals and 7 domestics to Brandon, 3 bushmen to Dauphin and one waitress, one housekeeper and 9 cord wood cutters within its zone. Of the transfers outside the province Winnipeg sent 507 bushmen, 4 cord wood cutters, one blacksmith, one saw filer, two cooks and one kitchen maid to Port Arthur, 4 bushmen to Timmins, 18 farm workers, 2 chambermaids and one cook to Regina, and one engineman to Prince Albert. Saskatchewan offices issued 929 certificates, 836 of which were for points within the province and 93 for employment in other provinces. Of the provincial transfers 784 were bushmen for the Prince Albert zone, 19 were farm labourers, 6 teamsters, 3 blacksmith, 4 miners going from Regina to Moose Jaw, 5 saw mill workers, 4 bolt cutters, 3 carpenters sent by the Moose Jaw office to points within the zone and the remainder housekeepers, cooks and hotel workers. The interprovincial transfers included 32 bushmen travelling from Saskatoon, 31 to Port Arthur and one to Edmonton, 1 bushman from Yorkton to Port Arthur, 28 saw mill workers from Regina to Lethbridge, 15 farm workers from Regina, 14 to Dauphin and one to Brandon, 2 miners from Estevan to Drumheller and from Moose Jaw 11 saw mill workers to Lethbridge, 3 bushmen to Dauphin and one bushman to Sudbury. Alberta issued 326 certificates, 316 for points within the province and 10 to other provinces. From Edmonton 9 bushmen were sent to Prince George and from Calgary one housekeeper to Saskatoon. Within the province Calgary sent 27 farm workers and 40 bushmen to Lethbridge, 13 bushmen, one housekeeper, one farm labourer and one cook to points within its own zone, 3 farm workers to Drumheller and 2 miners, one farm worker, one kitchen maid, one bushman and one cook to Edmonton. Edmonton transferred 2 farm workers to Drumheller, 106 bushmen, 11 cooks, 2 bookkeepers, 20 farm workers, 2 engineers, 3 blacksmiths, 41 mine labourers, one teamster, one saw filer, one machinist, two prop cutters, 2 carpenters and 7 hotel workers within the zone and Medicine Hat sent 15 harvesters to Lethbridge. The transportation certificates in British Columbia numbered 54, 2 of which were farm hands sent to Lethbridge and one a hoisting machine operator destined to Edmonton. Provincially the transfers included one bricklayer travelling from Nelson to Cranbrook, and 14 tie makers from the Prince George and Prince Rupert offices to their respestive zones. In addition, Vancouver sent one farm hand and one engineer, one flunkey, one cook and one dishwasher to Penticton, 8 diamond drillers to Nelson, one engineer and one sawyer to Prince George, 3 miners and one engineman to Kamloops and one engineer, one blacksmith, 11 miners and muckers and 4 labourers to points within its zone.

Of the 2,838 workers who benefited by the Employment Service reduced rate 2,010 were carried by the Canadian National Railways, 793 by the Canadian Pacific Railway, 8 by the Pacific Great Eastern Railway and 27 by the Temiskaming and Northern Ontario Railway.

Welfare Work in Pulp and Paper Industry

The *Canadian Mining Journal* of December, 1925, says: "The announcement of the decision of the Abitibi Power and Paper Company to provide group insurance for their employees on a contributory basis further emphasizes the importance which the big industries of the North Country are attaching to the need of providing protection for the wives and families of their employees in the event of death on the job or accident. Among the big mining companies whose employees benefit by a similar plan are the McIntyre and Dome mines of the Porcupine camp. The McIntyre for several years had adopted a policy of placing a graduated insurance protection policy on each one of its employees who has been more than six months on the payroll. The mine pays the total cost of the insurance, which increases annually to a certain maximum about $1,000. The Dome mine signed a somewhat similar contract this year, providing coverage for all their employees, free of cost to the employee, but payable to the dependents of the employee in the event of his death."

The International Paper Company is giving its employees an opportunity to purchase some of the seven per cent preferred stock of the company on very advantageous terms.

As an incentive to the subscribers to remain in the service of the company and retain their stocks, the company will pay each subscriber, in addition to the regular dividend of $7 per annum, a bonus of $1 on January 1, 1927, a bonus of $2 the following year, and an increasing amount of $1 each year until five bonus payments have been made, the last one being $5 in January, 1931.

The offer to purchase stock on these terms expired on January 1, 1926.

BUILDING PERMITS ISSUED IN NOVEMBER, 1925

THERE was a decline in the value of the building permits issued by 60 cities during November as compared with the preceding month and also as compared with November, 1924. The building authorized was valued at $7,696,099; this was 30.4 per cent less than the October total of $11,059,697 and 23.4 per cent less than the aggregate of $10,047,273 for November, 1924.

Cumulative Record for First Eleven Months, 1925.—The value of the building permits issued by 60 cities during the first eleven months of the last six years, is shown in the following table, which also gives the average index numbers of wholesale prices of building materials for the same months:—

Year	Value	Index Number of Wholesale Prices (11 mos. average)
1925	$115,250,956	153·5
1924	117,397,577	159·8
1923	126,227,451	166·9
1922	138,450,681	162·0
1921	110,828,380	185·0
1920	111,970,591	215·3

There were, therefore, declines in 1925 of 1.8, 8.7 and 16.8 per cent, in the eleven months' aggregate for the 60 cities as compared with 1924, 1923 and 1922, respectively, but the total was higher by 4.0 per cent than in 1921 and 2.9 per cent than in 1920.

Some 50 cities furnished statements, showing that they issued in November over 800 permits for dwellings estimated to cost about $3,300,000, and nearly 1,300 permits for other buildings valued at approximately $2,100,000. In the preceding months the erection was authorized of some 1,200 dwellings at a proposed cost of about $6,400,000 and of over 2,600 other buildings estimated to cost more than $2,900,000.

All provinces recorded reductions in the value of the building permits issued as compared with October. British Columbia and Quebec registered the greatest absolute losses of $1,143,487 or 58.3 per cent and $1,052,837 or 28.2 per cent, respectively.

As compared with November, 1924, Manitoba, Saskatchewan and Alberta reported increases in the value of the building authorized. The last named province showed the most pronounced gain of $73,040 or 66.1 per cent. Of the declines recorded elsewhere, that of $1,870,676 or 41.0 per cent in Quebec was actually the largest, but New Brunswick

registered the greatest proportional loss of $8,990 or 83.6 per cent.

Montreal and Toronto reported reductions in the value of building permits issued as compared with both October, 1925, and November, 1924, while Winnipeg and Vancouver showed declines in the former and increases in the latter comparison. Three Rivers, Guelph, Hamilton, Kingston, Oshawa, Port Arthur, St. Catharines, St. Thomas, Windsor, Calgary and New Westminster registered increases in both comparisons.

The accompanying table gives the value of the building permits issued by 60 cities during October and November, 1925, and November, 1924. The 35 cities for which records are available since 1910 are marked with asterisks.

BUILDING CONSTRUCTION IN THE UNITED STATES

A BULLETIN recently issued by the U.S. Bureau of Labour Statistics, Washington, entitled "Building Permits in the Principal Cities of the United States in 1924" shows that the total estimated cost of new buildings for which permits were issued in 274 cities having a population of 25,000 and upwards, amounted to $3,216,151,061. Of this total amount 64.6 per cent of the estimated cost of all buildings for which permits were issued during the calendar year 1924 was expended for residential buildings, while only 49.7 per cent of the total number of buildings for which permits were issued were for residential purposes. This is accounted for by the large number of private garages, totalling 224,089 in all, being 39.9 per cent in number and 3.1 per cent in cost of all buildings projected during the year.

One-family dwellings rank second in number and first in estimated cost, there being 215,170 permits issued for these homes, or 38.3 per cent of all permits issued. The estimated cost of their erection was $928,317,525, or 28.9 per cent of the cost of all classes of structures. The estimated average cost of a one-family dwelling house as shown in the report is $4,314. The average cost of a two-family dwelling is $8,317, or $4,159 per family. The average cost of apartment house dwellings is shown to be $42,732. As the 13,099 apartment houses referred to in the report were planned to house 134,744 families, the average cost per family provided for, would be $4,153, or practically the same as the cost per family in two-family dwellings. It must be borne in mind that all classes of dwellings and apartment houses are averaged in these estimates. The cost given in this report is estimated cost, which quite often will vary from the actual cost. In some cities charges are made for permits in accordance with the cost of the buildings, and in these cities, unless the city officials check up strictly, there is a tendency on the part of the builder to give rather low estimates. Often, too, the builder thinks the assessor will assess his property at a lower figure if he puts the cost low. Of course this is not true, as the assessor makes his own estimate of the worth of the property, but it has a tendency to keep the estimated costs as shown by the permits lower than they should be. Partly counterbalancing this is the tendency of certain builders of dwelling houses who desire to sell their houses as soon as erected, to report a rather high cost on the permits. A prospective buyer who had examined the records of the local building inspector, would thus be given an idea of higher value than the expenditure really involved.

Among the non-residential buildings the average cost of educational buildings (schools, libraries, etc.) is shown to be higher than that of any other group. It speaks well for the material side of the educational system at least that the average cost of buildings in this group is shown to be 153,351. This average cost is somewhat lowered too by the inclusion in the group of low-cost temporary school buildings in a number of cities reporting. The estimated cost of non-residential buildings for which permits were issued during the year was as follows: amusement buildings, $60,016,470; churches, $58,863,579; factories and workshops, $173,045,738; public garages, $80,160,491; private garages, $98,585,220; service stations, $11,043,125; institutions, $35,572,721; office buildings, $188,504,006; public buildings, $29,510,179; public works and utilities, $43,664,992; schools and libraries, $158,718,052; sheds, $9,095,659; stables and barns, $1,393,020; stores and warehouses, $185,419,389; all other, $6,107,648.

For the first time since the collection of building figures by the U.S. Bureau of Labour Statistics, a gain was shown in the percentage of families to be housed in new one-family dwellings, as compared with the percentage housed in that class of dwellings in the previous year. There is a contrasting falling off in the percentage of families to be housed in apartment houses, as compared with the previous year. Of course this gain in one-family

dwellings over apartment house dwellings is small and not positive proof of a change in the trend of housing conditions, but nevertheless a good sign.

There were fewer families planned for by all classes of dwellings in 1924 than in 1923, there being 455,429 living quarters planned for in the new buildings for which permits were issued in 1924, as compared with 459,471 in 1923.

The total number of buildings for which permits were issued in 1924 showed an increase of only nine-tenths of one per cent over the year 1923. The total estimated expenditure showed an increase in the same period of 3.5 per cent. In 1923 the total estimated expenditure for new buildings was 23.4 per cent larger than in 1922. The estimated expenditure on buildings in 1922 was 58.3 per cent larger than in 1921. The smallness of the increase in 1924 over 1923 would seem to indicate that the peak of construction had been about reached, taking the country as a whole.

According to figures compiled by Mr. Barclay White, a Philadelphia builder, and presented to both the Philadelphia and the National Congress of Construction Industries in 1921, 42.88 per cent of the cost of building construction comprises material. Skilled and unskilled labour together form 36.99 per cent of the cost, the remaining 20.13 per cent of cost being chargeable to supervision, insurance, engineering, etc.

Methods of Profit Sharing in British Printing Industry

The Federation of Master Printers of Great Britain appointed a committee a few months ago to examine schemes of profit-sharing and share-purchase suitable for the industry. Their report deals with the subject fully, and explains various methods which have been in existence in the industry for many years. One method is, that when the dividend on the ordinary capital is above an agreed minimum, for each 1 per cent declared above that amount 1 per cent, or some other agreed percentage on their total wages in the financial year shall be paid to the employees. Thus, if 6 per cent be the minium dividend, and 10 per cent be declared on the ordinary capital, the workers would receive 4 per cent (or some other fixed percentage) on their earnings for that year.

A second scheme suggested was, after reserving the minimum dividend, to distribute an agreed fraction of the balance of the profits to the workers as a percentage on their earnings. Both schemes have proved successful, and would, with modification, be suitable for any business or industry. The profits thus paid to the workers must be in addition to, and not in lieu of, fair wages. A working man lives by the week and cannot wait until the end of the year for part of his wages. His share of profits must be a bonus over and above a fair rate of wages.

Any scheme for offering shares to employees should be in accordance with a working-man's habits and outlook, and the following method, which has been very successful in the last 25 years, meets this difficulty, and is suitable for a company whose shares normally stand at a premium. A special class of employees' ordinary shares should be created, which can only be issued to the employees at par. The shares can be purchased for cash or by small weekly payments. When a holder wishes to sell he can, and when he ceases to be employed by the company he must offer his shares to the directors, who find another employee willing to purchase at par. If no employee be willing to purchase at par the holder can sell at any price to whom he pleases, but all subsequent holders when selling must offer the shares at par to the directors, so that ultimately the shares will return to the employees for whose benefit they were created. This scheme encourages the invaluable qualities of thrift and self-reliance, and gives to the holder all the dividends and rights of an ordinary shareholder (except a restriction on the rights of sale) on very favourable terms.

The Union Co-operative Insurance Association, with home offices in the Machinists Building, Washington, D.C., which was organized and is controlled by members of the International Brotherhood of Electrical Workers, has been issuing regular standard life insurance policies on the participating plan since January, 1925. It is now announcing new low rates for the standard forms of individual insurance on the non-participating plan. The announcement of the group insurance for labour organizations was well received, inquiries coming from locals and internationals all over the country. The group rates are based on the ages of the members, so that no general rate can be quoted, except that for an average union, the cost would be about ninety cents per month for a benefit of $1,000 for each member in good standing.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Clothing

TORONTO, ONTARIO—DUFFIN AND ROSS COMPANY, AND THE TORONTO JOINT BOARD OF THE AMALGAMATED CLOTHING WORKERS OF AMERICA

Agreement to be in effect from October 9, 1925, until October 9, 1926, with 90 days' notice of renewal, change or amendment.

Both parties agree to have union shop; all work is to be cut and made by members of the Amalgamated Clothing Workers of America, this to apply to any work manufactured off the premises; in event of help being required in shops, employers will make application to the unions; both parties agree to equal division of work. Hours per week, forty-four. In case of differences arising as to rates of wages, hours of labour, or other matters under this agreement the employers will receive a committee of the employees to discuss and adjust matters.

Overtime, time and a half; legal holidays, double time.

The employees are to be given the benefit of any improvement in the matter of hours or wages occuring in the general labour market of the trade.

The wage scale prevailing on this market shall be paid to all competent employees.

The employees agree to maintain fair and equitable production, and be responsible for satisfactory work.

The system of piece work in the cutting room will remain as it is at present.

Manufacturing: Printing and Publishing

TORONTO, ONTARIO—PUBLISHERS OF TORONTO DAILY NEWSPAPERS AND TORONTO TYPOGRAPHICAL UNION NO. 91

Agreement to be in effect from April 1, 1925, until March 31, 1928.

Only union members are to be employed. The union is to furnish competent journeymen as called for by the publisher. If union fails to do this, publisher may secure helpers who must make application to join the union.

Night work shall be between 6 p.m. and 5 a.m. and day work between 7 a.m. and 6 p.m. Where three shifts are employed, two shall be night work.

An extra man put to work within half an hour of starting time shall have a full day's pay. If brought in after starting time, and working less than five hours, he shall be paid overtime rates; after five hours, a full day's pay, but if required he shall work until 6 p.m. or 5 a.m. to make up the full day's or night's work. A member called back after a full day's or night's work shall perform work to that amount if required. Overtime shall be in rotation and evenly distributed, except where a man has charge of a particular work.

On a seven-day paper when night staff is brought back to work day work, six hours shall constitute a day's work; overtime rates thereafter.

Foremen shall have full control of operators, machine tenders and other employees.

Only journeymen members, or apprentices in last six months, shall be eligible as learners during working hours. The term for learners shall be six months, and compensation not less than three-quarters of regular scale. A journeymen member employed in an office shall be privileged to practice for not more than two hours per day on machines.

No member may act as operator machinist in an office where more than three machines are operated. With more than three machines a permanent machine tender shall be employed. An office with three machines working day and night shall employ a machine tender. Machine tenders shall attend to the typesetting and type casting machines. Provision is made for a standing committee of two from each party to decide questions regarding this agreement or alleged violation thereof. If no settlement is reached within thirty days questions shall, on request of either party, be submitted to arbitration.

Foreman shall be the judge of competency.

Provision shall be made that not less than half the staff shall work only forty-five hours and shall complete their day on Saturday or some other day at one o'clock.

Minimum wages per week: on evening newspapers, from April 1, 1925, until March 31, 1926, $41.50; from April 1, 1926, until March 31, 1927, $42.50; from April 1, 1927, until March 31, 1928, $43.50. Hours per day, 8. Overtime, time and one-half, on basis of 46½ hour week. On morning newspapers, from April 1, 1925, until March 31, 1926, $44; from April 1, 1926, till March 31, 1927, $45; from April 1, 1927, till March 31, 1928, $46. Hours per night, seven and one-half. Overtime, time and one-half, basis on wages paid.

Work on Sundays and holidays, double time, men to be guaranteed at least two consecutive hours' work. This does not apply on morning newspapers. Day men on morning newspapers shall work on above holidays five hours, to be completed by 12.30 p.m. or not later than 1 p.m., for which they shall receive one day's pay.

In each office, one apprentice to six journeymen, or fraction of six, up to twenty-four, one for each additional ten. Beginning with the second year, each apprentice shall attend at least one session a week at the technical school. In third year, they shall pay to the union fifty cents per week for the International Typographical Union course of instruction. Apprentices must graduate before becoming journeymen. Office boys may be employed on certain work. Apprentices shall be not less than sixteen years of age and shall serve five years. They shall be registered by the union secretary. The foreman and the apprentice committee shall determine fitness of applicant. At end of second year apprentice must become apprentice member of the union. Apprentices shall undergo yearly examinations. Scale for apprentices per week from April 1, 1925, till December 31, 1925, from $15 for first six months of third year to $27 for second six months of

fifth year. From January 1, 1926, till March 31, 1928, from $15 for first six months of third year to $28 for second six months of fifth year.

The Joint Apprentice Committee shall be composed of two members appointed by each party.

MOOSE JAW, SASKATCHEWAN.—CERTAIN FIRMS AND INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL NO. 627.

Agreement effective from November 1, 1924, until October 31, 1926, with at least sixty days' notice of change. Only union members are to be employed. Union officers will preserve discipline among union members while on duty.

A committee of two from each party shall decide questions regarding scale of wages and agreement. In case of failure to agree committee shall select a fifth and disinterested person. Decision of committee shall be final and binding.

Local union laws (not affecting hours or working conditions) shall not be subject to arbitration.

Wages per hour, from November 1, 1924, until October 31, 1926: newspaper workers, day work, 91⅔ cents; night work, $1.04½; hours, day work, 48; night work, 45. Book and job printers, day work, per hour, 91⅔ cents; night work, $1.04½; hours, 44. The middle shift (one not falling between 7 a.m. and 6 p.m. or 6 p.m. and 5 a.m.) shall receive the rates of pay for night work. Foreman, 50 cents per shift over scale.

Holiday work, time and one-half, this not to apply to night shifts of morning papers or night staffs of afternoon papers published every week day. Sunday work, double time, except for night staffs of morning or afternoon papers.

A journeyman called to work outside of regular hours shall receive $1 for call besides overtime pay.

Foreman shall have full control of employment and discharge.

One learner (a journeyman member) shall be allowed to every four machines, as well as apprentice members on last six months. Term of apprenticeship for beginners on typesetting and typecasting machines, thirteen weeks, at following scale: first three weeks, $2.80 per day; thereafter an increase of $1 each week for next ten weeks. If beginner does not attain standard speed in thirteen weeks he shall be granted an extension of up to three months.

One apprentice to five journeymen. Beginning with third year apprentices shall complete International Typographical Union course in printing, paying fifty cents per week. No youth under fifteen years of age shall be accepted. The foreman and local apprentice committee shall examine applicants.

Wages per week for apprentices on newspapers, third year, $16; fourth year, $20.50; fifth year, $26.25 and $31; night work $2 extra. On book and job work, during third year $14.50; fourth year, $19.25; fifth year, $24.25 and $28; night work $2 extra.

SASKATOON, SASKATCHEWAN—EMPLOYING PRINTERS AND INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL NO. 663.

Agreement to be in effect from November 1, 1925, to November 1, 1926, and from year to year unless notice is given before September 1 of any year.

Only union men are to be employed. Union agrees to furnish capable men.

Wages per week, news offices, day work (8 hours per day) $44, night work (7½ hours per night) $47; job offices, day work $40.33; night, $45.98.

News offices, 48 hours per week; job offices, 44 hours per week. Middle shift to be governed by night scale of wages and hours.

Overtime, first three hours, time and one-half; thereafter double time.

Call-back, $1 extra.

Apprentices: one to five journeymen, the limit being two apprentices, except when an apprentice is in the last six months, where office may have one extra. Wages, first year, 33⅓ per cent of journeymen's scale; second year, 42 per cent; third year, 53 per cent; fourth year, 68 per cent; 5th year, 80 per cent. A machinist's assistant shall be classed as an apprentice but shall not interfere with the allotment and shall receive the apprentice scale.

Machine learners: term, thirteen weeks. Wages per week, first three weeks, $22; next five weeks, $28; last five weeks, $35. Beginners attaining standard speed shall have full wages; an extension of time may be granted up to three months.

Time lost during week in which holiday occurs shall be deducted from regular scale. Work done on holidays, double time, morning papers excepted after 7 p.m. Where night work is done, 5½ hours to be a night's work previous to a holiday.

In case of disputes arising under provision of the agreement, if impossible of adjustment they shall be referred to a committee of three, one from each party, and a third selected by them. Decision of this committee shall be final and binding.

SASKATOON, SASKATCHEWAN—LOCAL FIRMS AND INTERNATIONAL BROTHERHOOD OF BOOKBINDERS, NO. 85

Agreement to be in effect from November 1, 1925, to October 31, 1927.

Scale for men: hours per week, 44. Wages, journeymen, $40.35. Overtime, first three hours, time and one-half; thereafter double time. Sundays and holidays, double time. All bindery men's work to be done by union members. No girl shall do journeymen's work.

Apprentice scale: minimum, first six months, 35 per cent; second six months, 40 per cent; third six months, 45 per cent; fourth six months, 50 per cent; fifth six months, 70 per cent; seventh six months, 80 per cent; eighth six months, 90 per cent.

One apprentice to every four journeymen. No apprentice may move to another bindery during his apprenticeship without the sanction of both parties to the agreement.

Scale for women: hours per week, 44; wages for journeywomen, $17. Overtime, first three hours, time and one-half; thereafter, double time; Sundays and holidays, double time.

Apprentice scale, per week: minimum, first six months, $10; second six months, $11; third six months, $12.50; fourth six months, $14.50.

General clauses: In case of reduction of staff persons last employed shall be first discharged; and in case of increase of staff such persons shall be reinstated in reverse order.

In event of any misunderstanding matter shall be submitted to arbitration, one arbitrator being selected by each side and a third by them. The award shall be final.

Construction: Buildings and Structures

TORONTO, ONTARIO—CERTAIN MASTER INSULATORS AND INTERNATIONAL ASSOCIATION OF HEAT AND FROST INSULATORS AND ASBESTOS WORKERS, LOCAL NO. 20

Agreement to be in effect from May 1, 1925, to April 30, 1926.

Agreement to be binding within thirty mlies of Toronto city hall.

Working hours, 8 per day, between 8 a.m. and 5 p.m. and 8 a.m. and 12 noon on Saturdays.

Not more than one improver to a mechanic.

Overtime to 10 p.m., time and one-half; thereafter, Saturday afternoons, Sundays and holidays, double

time. No work on Labour Day except in emergency, when triple time shall be paid.

There shall be a trade board of one representative for each employer signing the agreement, and an equal number of union members. Board shall have the right to investigate all questions arising under the agreement, and may summon, question or examine any party to the agreement. Disputes shall be taken care of by the trade board, notice being given in writing by aggrieved party within two days. Regular meetings of the trade board shall be held quarterly and special meetings may be called. Voting shall be by secret ballot. The board may impose fines or other penalties where agreed by vote, shall see that the money is collected, and decide the disposition of same.

Lockouts and strikes must be ordered only by the Building Trades Employers' Association or the Building Trades Council. Disputes shall be referred to the trade board.

If the union fails to supply help, an emergency number may be employed and may work under permit until replaced.

Wages per hour, mechanics, 85 cents; improvers, first year, 45 cents; second year, 55 cents; thereafter, 65 cents. Improvers may try mechanics' examinations after four years.

Provision is made for paying board, railroad transportation and extra carfare when required.

Local No. 20 agrees that there shall be no limitations or restrictions placed on individual efforts of membership.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

DURING December the department received information regarding twenty-five contracts executed by the Government of Canada, which included among their provisions the fair wages conditions sanctioned by Order in Council for the protection of the labour to be employed. In twenty-two of these contracts the general fair wages clause is inserted as follows:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Each of the remaining three contracts contained a schedule of rates and hours based on the current standards of the district in these respects. These schedules are given below.

The following general labour conditions sanctioned by the Fair Wages Order in Council appear in the twenty-five contracts above referred to:—

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

2. The Contractor shall post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the Fair Wages Clause or Schedule inserted in his contract for the protection of the workmen employed, also any decision of the Minister of Labour under the preceding paragraph.

3. The Contractor shall keep proper books and records showing the names, trades, and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, and the books or documents containing such record shall be open for inspection by the Fair Wage Officers of the Government at any time it may be expedient to the Minister of Labour to have the same inspected.

4. The Contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of the contract in respect of work and labour performed in the execution of the contract unless and until he shall have filed with the Minister in support of his claim for payment a statement attested by statutory declaration, showing (1) the rates of wages and hours of labour of the various classes of workmen employed in the execution of the contract; (2) whether any wages in respect of the said work and labour remain in arrears; (3) that all the labour conditions of the contract have been duly complied with; or, in the event of notice from the Minister of Labour of claims for wages, until the

same are adjusted. The Contractor shall also from time to time furnish the Minister such further detailed information and evidence as the Minister may deem necessary in order to satisfy him that the conditions herein contained to secure the payment of fair wages have been complied with, and that the workmen so employed as aforesaid upon the portion of the work in respect of which payment is demanded have been paid in full.

5. In the event of default being made in payment of any money owing in respect of wages of any workmen employed on the said work and if a claim therefor is filed in the office of the Minister and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of the moneys at any time payable by His Majesty under said contract and the amounts so paid shall be deemed payments to the Contractor.

6. These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payments for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

7. With a view to the avoidance of any abuses which might arise from the sub-letting of contracts it shall be understood that sub-letting other than such as may be customary in the trades concerned is prohibited unless the approval of the Minister is obtained; sub-contractors shall be bound in all cases to conform to the conditions of the main contract, and the main Contractor shall be held responsible for strict adherence to all contract conditions on the part of sub-contractor; the contract shall not, nor shall any portion thereof be transferred without the written permission of the Minister; no portion of the work to be performed shall be done at the homes of the workmen.

8. All workmen employed upon the work comprehended in and to be executed pursuant to the said contract shall be residents of Canada, unless the Minister is of opinion that Canadian labour is not available or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Department of Public Works

Contracts containing schedule of wages and hours

Reconstruction of wharf in concrete at Valleyfield, P.Q. Name of contractors, F. A. Grothé & Fils, Montreal, P.Q. Date of contract, November 19, 1925. Amount of contract: Unit prices, approximate expenditures, $7,539. A fair wages schedule is inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours per day
	$ cts.	
Foreman	0·50 per hour	10
Carpenters	0·45 "	10
Concrete mixers	0·35 "	10
Concrete placers	0·35 "	10
Labourers	0·30 "	10
Carters (single)	4·00 per day	10
Carters (double)	7·00 "	10

Construction of a Signalling School building with a 13-inch brick wall and asbestos shingle roof at the Royal Canadian Navy Barracks, Esquimalt, B.C. Names of contractors, Williams, Trerise & Williams, Victoria, B.C. Date of contract, December 8, 1925. Amount of contract, $5,629.

Trade or class of labour	Rates of wages not less than	Hours per day
	$ cts.	
Bricklayers and masons	9·00 per day	8
Carpenters and joiners	7·00 "	8

La Cour and Knud Schioler ("La Cour and Schioler"), Winnipeg, Man. Date of contract, November 28, 1925. Amount of contract, unit prices, approximate expenditure, $29,046.

Construction of an extension to the landing wharf at Chandler, P.Q. Names of contractors, "Farley and Grant," Arthur E. Farley of Ottawa, Ont., and Percy R. Grant of Hazeldean, Ont. Date of contract, December 15, 1925. Amount of contract, unit prices, approximate expenditure, $72,993.80.

Construction of a public building at Nelson, N.B. Name of contractors, Geo. Burchill and Sons, Nelson, N.B. Date of contract, December 4, 1925. Amount of contract, $7,989.76.

Department of Railways and Canals

Contracts containing the general Fair Wages Clause

Repairing of highways on the Williamsburg Canals. Name of contractor, Frank Milligan, Iroquois, Ont. Date of contract, December 2, 1925. Amount of contract, schedule rates (approximately $5,204 estimated from estimated quantities).

Construction and erection of bridge at Mile 29.3, Buctouche S/D, Canadian National Railways. Name of contractors, Dominion Bridge Company, Limited. Date of contract, December 9, 1925. Amount of contract, schedule rates.

Post Office Department

The following is a statement of payments made in December, 1925, for supplies ordered by the Post Office Department, under contracts which are subject to the Fair Wages policy:—

Nature of Orders	Amount of Orders
Making metal dating stamps and type also other hand stamps and brass crown seals	$ 1,256 21
Making and repairing rubber stamps, daters, etc.	359 81
Making up and supplying letter carriers' uniforms, etc.	14,148 03
Stamping pads, inks, etc.	123 47
Mail bag fittings	27,779 34
Scales	842 29
Repairs to letter boxes, etc.	299 22
Cotton duck bagging	30,742 92
Satchels	500 63

HOURS OF WORK AND WAGES ON AMERICAN FARMS

THE Bureau of Agricultural Economics, United States Department of Agriculture, in co-operation with various College authorities, has initiated a series of surveys on the living conditions in farm homes in the United States. The following information shows the length of the working day for the person who works his own land, and also the hours available for rest and recreation:—

In Alabama, where data were obtained from 198 families in selected localities during the survey ending August 31, 1924, the working day of the operator is 9.9 hours and that of the home-maker 10.1 hours excluding Sundays, with 3.8 hours rest and recreation within the home for the former and 4 hours for the latter.

In Kansas, information obtained from 406 families in selected localities during the survey ending December 31, 1923, shows that the working day of the operator and that of the home-maker is 11.7 hours excluding Sundays, with 1.8 hours rest for the former and 2 hours for the latter.

In Delaware County, Ohio, data obtained from 383 families during the survey ending September 30, 1923, show that the working day of the operator and of the home-maker is 11.1 hours excluding Sundays, with 2.6 hours rest and recreation in the home.

In Missouri, where data were obtained from 178 families in selected localities during the survey ending December 31 1923, the working day of the operator and that of the home-maker is 11.4 hours with 2.4 hours rest and recreation within the home.

In Lebanon Town, Newhaven County, Connecticut, where information was obtained from 110 families during the survey ending December 31, 1923, the working day of the home-maker is 13.2 hours with 0.9 hours rest and recreation in the home and 26 hours during the year for vacations.

Wages of Farm Workers.—A table of prevailing farm wage rates paid to farm workers, published by the United States Department of Agriculture, shows large variations between the rates prevalent in different parts of the country. The latest figures, for July 1, 1925, are as follows:—

In North Atlantic States per month with board, $46.35; without board, $67.34; per day with board, $2.73; without board, $3.54; in East North Central States per month with board, $40.41; without board, $54.45; per day with board $2.31, without board $2.99; in West North Central States per month with board $41.02; without board $54.14; per day with board, $2.22, without board $2.95; in South Atlantic States per month with board, $26.38; without board $37.41; per day with board $1.41, without board $1.84; in South Central States per month with board, $25.75; without board $36.56; per day with board $1.38, without board $1.71; Western States per month with board $52.92; without board $73.74; per day with board $2.49, without board $2.91; and in the whole country per month with board $34.94, without board $48.55; per day with board $1.89, without board $2.40.

An interesting table has also been published by the New York State College of Agriculture, for a series of years, showing the acreage of farm land (average values, including all improvements) purchased with one month's farm wages. The wages are cash wages, ex-

clusive of board. The figures are, therefore, a rough indication of the economic facts on which any purchase of land by a worker with a view to becoming an independent farmer, would have to be based. The variation over a period of 45 years of the amount of land thus represented by the worker's cash earnings is, in spite of some violent fluctuations, small; in other words, the worker's chances of independence have neither permanently improved nor gone back over a long period. (There was a noticeable increase between the figure for 1869, namely 0.44 acres, and that for 1880-81, namely, 0.65 acres). The last five years show an upward trend.

The amount of improved land purchasable by a farm-worker's monthly cash earnings in 1880-81 was 0.65 acres; in 1889-90, 0.62 acres; in 1899, 0.70 acres; in 1910, 0.49 acres; in 1920, 0.68 acres; in 1921, 0.48 acres; in 1922, 0.55 acres; in 1923, 0.68 acres; in 1924, 0.69 acres; and in 1925, 0.71 acres.

Labour Policy of Italian Government

The policy of the Italian Government with regard to trade unionism, which has attracted a certain amount of notice of late, is indicated in a Bill recently adopted by the Italian Parliament. The Bill lays down the conditions which are to govern the recognition by law of trade unions, whether of employers or workers; it contains detailed provisions with regard to levies, discipline, and official supervision; it provides for the registration of collective agreements; it establishes a system of industrial courts for the settlement of trade disputes; and it prescribes penalties for strikes or lockouts in connection with disputes within the jurisdiction of these courts. Under its provisions only one trade union is to be recognized for each class of workers or employers. Certain other unions are permitted to exist, subject to legislation already in force, but trade unions of officers or men of the Army and Navy, magistrates, and officials of certain public departments, are prohibited. The reference to industrial courts is compulsory in the case of all disputes relating to the enforcement of collective agreements and in the case of all disputes relating to the introduction of new conditions of labour in agriculture and the public utility services.

A particularly interesting provision is that whereby a recognized trade union (i.e., in the case of employers, an association whose members employ at least one-tenth of the labour employed in the industry and district concerned; in the case of workers, an association whose members constitute at least one-tenth of the total workers of the class and district concerned) is empowered to represent and levy contributions from all the employers or workers, as the case may be, of the class and within the district covered by the union, whether they are or are not members of the union. This, it is explained by the Minister of Justice, is one of the privileges which counterbalance the obligations imposed on such unions by the Bill. The Minister, in a personal interview, also emphasized the difference between the industrial courts and simple compulsory arbitration as established by legislation in certain other countries which had the character of compromise. The industrial courts ("labour magistracy") of Italy, he said, would not exist for the purpose of making business deals but of dispensing justice.

Pensions of School Teachers in Ontario

The second annual report of the Ontario Teachers' and Inspectors' Superannuation Fund shows that pensions to the amount of $1,588,000 are now being paid to the school teachers and inspectors of the Province. The number of teachers on the fund is 499, of which number 338 are women, who receive $1,049,000. The maximum annual pension is $1,000 and the minimum $365, based on 40 years of service; it is compulsory on the part of all teachers and inspectors to contribute to the fund, which takes the place of the previous pension funds of Ontario. The teachers and inspectors contribute 2 1-2 per cent of their salaries to the superannuation fund, the Provincial Treasury contributing a similar sum. The report shows that at the age of 25 years the percentage of females leaving the teaching profession is 72, and of males 52. At 40 years of age, the figures are females 28, males 27; at 60 years one per cent and six per cent, respectively. At the latter age the proportion expected to retire on pension is 91 per cent of women teachers and 73 of males.

Of the women contributors to the fund between the years 1917 and the summer of 1924 there were 7,200 who ceased to contribute, and 850 men also dropped out in the same period. In the seven years the deaths of 153 women and 101 men were recorded.

PRICES, RETAIL AND WHOLESALE, IN CANADA, DECEMBER, 1925

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month continued upward, both the family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being considerably higher.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities, was $11.56 at the beginning of December, as compared with $11.23 for November; $10.58 for December, 1924; $10.73 for December, 1923; $10.39 for December, 1922; $11 for December, 1921; $14.84 for December, 1920; $16.92 for June, 1920 (the peak); $13.65 for December, 1918; and $7.96 for December, 1914. Potatoes again showed a substantial advance, the increase in this item alone accounting for 22c. of the increase in the budget. Besides the increase in potatoes, less important advances occurred in the prices of eggs, butter, sugar and milk. Slight declines occurred in the prices of beef, pork, bacon, lard, rolled oats, and evaporated apples. Including the cost of fuel and rent, with that of foods the total budget averaged $21.87 at the beginning of December, as compared with $21.51 for November; $20.90 for December, 1924; $21.21 for December, 1923; $20.97 for December, 1922; $21.49 for December, 1921; $25.67 for December, 1920; $26.92 for July, 1920 (the peak); $21.64 for December, 1918; and $14.26 for December, 1914. Higher prices for coal in some localities caused an increase in fuel. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the commercial importance of the commodities, advanced to 163.5 for December, as compared with 161.1 for November; 160.9 for December, 1924; 153.5 for December, 1923; 153.1 for December, 1922; 150.6 for December, 1921; 217.2 for December, 1920; 256.7 for May, 1920 (the peak); and 205.6 for December, 1918. Forty prices quotations were higher, forty-three were lower and one hundred and fifty-three were unchanged.

In the grouping according to chief component material five of the eight main groups advanced, two declined, while one remained unchanged. The Vegetables and their Products group advanced substantially, mainly because of higher prices for wheat, flour and other milled products, hay and straw. Higher prices for cattle, hogs, beef, milk, butter and furs caused an advance in the Animals and their Products group. The Wood and Wood Products group was slightly higher, chiefly because of higher prices for wood pulp. The Iron and its Products group and the Chemicals and Allied Products group both showed slight increases. The Fibres, Textiles and Textile Products group and the Non-Ferrous Metals group both declined, the former mainly because of lower prices for cotton, cotton yarn, silk, sash cord and jute, and the latter due to declines in copper, lead, silver and tin.

In the grouping according to purpose both consumers' goods and producers' goods advanced. In the former group lower prices for fruit, bacon, cheese, vegetables and fresh eggs were more than offset by the higher prices for flour, fish, beef, milk, butter and spices. In producers' goods the increase was due to higher prices for materials for the fur industry, the chemical using industries, the meat packing industries, the milling industries and for miscellaneous producers' materials. Prices for materials for the textile and clothing industries, for the leather industries and for the metal working industries were slightly lower.

In the grouping according to origin domestic farm products, articles of marine origin and articles of forest origin advanced, while articles of mineral origin showed a slight decline. Raw or partly manufactured goods advanced, due to higher prices for grains, tobacco, live stock, beef, milk, furs and antimony. The increases in these commodities more than offset lower prices for fruit, vegetables, raw sugar, rubber, cotton, wool, jute and non-ferrous metals. Fully or chiefly manufactured goods were higher, mainly because of higher prices for flour and milled products, butter, glycerine, rolling mill products and wood pulp.

The index number of wholesale prices in Canada published by the United States Federal Reserve Board, including thirty-three raw materials, twenty-eight semi-manufactured or producers' goods and thirty-eight finished or consumers' goods, based upon price levels in 1913 as 100, advanced substantially to 152 for November, as compared with 145 for October; 146 for September; and 148 for November, 1924. Grouped by stage of manufacture raw materials, producers' goods and consumers' goods advanced. Grouped by origin both domestic goods and imported

goods were higher. Export goods also advanced.

The Canadian Bank of Commerce index of wholesale prices of exports rose from 161.12 for November to 163.97 for December, while that for imports declined from 166.27 to 161.24. The combined index of both exports and imports fell from 163.69 to 162.61.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. This index number has been calculated by years back to 1890, being unweighted, however, for the period 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925, and in greater detail in the Report on "Prices and Price Indexes 1913-1924," issued by the Bureau. A description of the methods used in the construction of the index number appears in the LABOUR GAZETTE for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of December of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods; laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Cost of Electric Current for Householders

With rates in 1913 at 100, index numbers of electric light rates were: 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1919, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5.

Retail Prices

Beef prices continued to decline, sirloin steak averaging 27.4 cents per pound in December, as compared with 27.7 cents in November, rib roast 20.4 cents per pound in

December and 20.6 in November, and stewing beef 11.3 cents per pound in December and 11.6 cents in November. Declines occurred in most localities. Veal also showed a general decline, averaging 18.2 cents per pound, as compared with 18.6 cents in November. Mutton was unchanged in the average. Both fresh and salt pork declined, the former averaging 28 cents per pound in December, as compared with 28.7 cents in November, and the latter 26.7 cents per pound in December, as compared with 26.9 cents in November. Bacon and boiled ham also averaged slightly lower. In fresh fish, cod steak and halibut were higher, while white fish declined slightly. Finnan haddie declined from 20.8 cents per pound in November to 20.4 cents in December. Lard showed little change, increases in some localities being offset by declines in others. Eggs showed a substantial general advance, fresh averaging 64.7 cents per dozen in December, as compared with 57.2 cents in November and 48.2 cents in October; and cooking averaging 51.3 cents per dozen in December, 48.7 cents in November and 43 cents in October.

Higher prices for milk were reported from Three Rivers, St. John's, Montreal, Toronto and Medicine Hat. Dairy butter advanced in many localities, averaging 46.1 cents per pound, as compared with 44.7 cents in November, while creamery was slightly higher, averaging 50.6 cents per pound. Cheese advanced slightly, averaging 33.5 cents per pound.

Lower prices on bread were reported from Truro, Quebec and Montreal. Flour advanced slightly, averaging 5.2 cents per pound. Rolled oats were somewhat lower. Rice and tapioca were steady. Canned vegetables showed a slight decline, tomatoes averaging 17.2 cents per two and one-half pound tin, peas 17.9 cents per two-pound tin and corn 16.9 cents per two-pound tin. Potatoes showed a general advance, averaging $2.62 per ninety pounds, as compared with $1.96 in November and $1.48 in October. Evaporated apples were down from 20.1 cents per pound in November to 19.8 cents in December. Raisins were slightly higher at an average of 17.3 cents per pound. Granulated sugar advanced in most localities and averaged 7.9 cents per pound. Coffee and tea showed little change.

Anthracite coal was up from an average of $17.41 per ton in November to $18.02 in December. Higher prices were reported from Halifax, Charlottetown, Fredericton, Montreal, Hull, Ottawa, Belleville, Peterboro, Oshawa, Brantford, Kitchener, Stratford, Owen Sound, Sudbury, Cobalt, Port Arthur and Fort William. Bituminous coal was up from an average of $10.31 to $10.42. Hardwood was little changed in the average at $12.16 per cord. No changes were recorded in rent.

Wholesale Prices

The following is a summary of a statement on prices changes during the month issued by the Dominion Bureau of Statistics.

Wheat prices advanced to higher levels during December. No. 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis, averaged $1.57 per bushel, as compared with $1.42 in November. The low price for the month was $1.44⅜ reached on the 21st, and the high $1.70 on the 7th. Short stocks existing abroad and the suspension of Russian exports, together with reports of a short crop from the Argentine were considered to to be the causes of the upward movement. Coarse grains showed considerable fluctuation but were generally somewhat weaker, yellow corn at Toronto being 92 cents per bushel as compared with 96¾ cents in November; Western barley 63 cents per bushel, as compared with 63½ cents in November; Western oats 48 cents per bushel, as compared with 51 cents in November; and flax seed $2.26 per bushel, as compared with $2.29 in November. Flour prices moved in sympathy with wheat being up at Toronto from $8.11 per barrel to $9.20. Oranges at Toronto fell from $6-$9.50 per case to $5.50-$6, and lemons from $6 per case to $4-$5. Apples were slightly lower at $6.50 per barrel. Ceylon rubber was down from $1.05 per pound to 99 cents. Raw sugar fell from $3.74 per hundred to $3.71½. Coffee at Toronto declined one to two cents per pound. Ontario tobacco rose from 18 cents per pound to 22 cents. Potatoes at Montreal declined from $2.80 per bag to $2.66, and at Toronto from $2.50-$3 per bag to $2.50-$2.75. Turnips and carrots were slightly lower. Turpentine fell 7 cents per gallon to $1.58. Hay at Toronto advanced from $15.29 per ton to $15.60 and straw from $8.84 per ton to $9.60. Western cattle at Winnipeg rose from $6.57½ per hundred pounds to $7.03, and choice steers at Toronto from $7 per hundred pounds to $7.17. Hogs at Toronto were up from $12.35 per hundred pounds to $13.25, while sheep continued to decline, being $5.06 per hundred pounds, as compared with $6.75 in November. Whitefish advanced from 17 cents per pound to 21 cents, and salt mackerel from $7 per barrel to $7.50. Mink skins advanced $1 each to $13 and muskrat skins from $1.10 each to $1.35. Dressed beef at Toronto advanced two cents per pound to 18 cents. Milk at

Montreal advanced from 25 cents per gallon to 29 cents. Creamery butter was slightly higher. Cheese at Toronto fell from 27 cents per pound to 24 cents. Fresh eggs at Montreal declined from 75-80 cents per dozen to 72-75 cents, while storage eggs were slightly higher at 43½ cents per dozen. Cotton prices showed little change, averaging 20.1 cents per pound at New York as compared with 20.8 cents in November. Cotton yarn was down from 43½ cents per pound to 40½ cents. Jute declined from $16.17 per hundred to $15.90. Raw silk at New York was slightly lower. Non-ferrous metals were generally lower, copper declining from $16.55 per hundred to $15.80; lead from $9.40 per hundred to $8.85; silver from 71½ cents per ounce to 69⅛ cents, and tin from 64½ cents per pound to 64 cents. Antimony advanced slightly to 18 cents per pound.

for British coal. o. British coal. p. New houses as high as $40.00 per month. r. Mining company houses $20; others $40-$60. s. For new tenants $30-$35 and $20-$25. w. Company houses $10-$20; others $30-$35. x. Houses with conveniences not extensively occupied by workingmen, but some at $35.00.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movement of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The tables of index numbers published quarterly with this article as well as tables of index numbers of wholesale prices by groups and cost of living index numbers of the principal countries will be found in the Supplement to this issue of the LABOUR GAZETTE, "Prices in Canada and other Countries".

Great Britain

The Board of Trade index number for November, on the base 1913=100, was 153.7, a decline of 0.7 per cent from the October level. Foods advanced slightly owing to a rise in the price of cereals. Non-foods declined 1.4 per cent, the principal change being a decline of 6.2 per cent in the price of cotton.

The *Statist* index number (in continuation of Sauerbeck's figures), rose 2.1 per cent in November to 132.9, after having declined in September and October. The recovery was most marked in "materials" which rose by 2.8 per cent, textiles gaining 7.4 per cent. Foods rose 0.9 per cent, vegetable food and sugar, coffee and tea rising, while animal food declined.

The *Times* index number, on the base 1913=100, was 156.7 on November 30, a decline of 1 per cent from the figure for one month earlier. Foods rose about 5 per cent and materials fell 1.5 per cent. The groups cereals and meat and fish showed the greatest rises and cotton fell, owing to the good American crop.

COST OF LIVING.—The index number of the Ministry of Labour declined 2 points to the level 175 on January 1. Foods declined 3 points to 171, and fuel and light rose from 180 to 180-185. Rent remained at 148, clothing at 225, and sundries at 180.

Belgium

WHOLESALE PRICES.—The index number compiled by the Ministry of Industry and Labour, on the base April, 1914=100, rose 1.7 per cent to 577 in September. The principal changes were rises in the groups food products, glass products, textile products, resin products and raw rubber.

COST OF LIVING.—The index number of cost of living for a working-class family of the lowest category rose slightly in October to 140.90. There were slight rises in all the groups of the budget.

France

WHOLESALE PRICES.—The index number of *Statistique Générale* rose 3 per cent in October, being 584, on the base July, 1914=100. The rise in industrial materials was accountable for the change, minerals and metals rising 12 per cent, textiles rising 2.8 per cent and miscellaneous goods rising 2.3 per cent. Vegetable foods rose slightly and other food groups declined.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, calculated each week, showed a slight upward tendency in November. Goods produced rose steadily and goods imported declined. Farm products rose quite sharply and industrial materials fell slightly. The groups cereals and potatoes, fats, sugar, meat and fish, colonial products and hops all rose and the groups hides and leather textiles, and minerals and petroleum declined. Coal and iron showed no change.

Sweden

WHOLESALE PRICES.—The index number of the Department of Commerce rose one point in November to 155, on the base respective months of 1913=100. Raw materials rose three points and semi-manufactured and completely manufactured goods showed no change. In the separate groups there was very little movement, vegetable and animal foodstuffs both showing slight advances.

Switzerland

COST OF LIVING.—The index number of the Union of Swiss Co-operative Stores for December was 163 on the base June, 1914=100. This was the lowest level for the year, whereas in both of the previous years the December figure stood above those for the other months. Food prices were noticeably lower than in the previous year.

New Zealand

WHOLESALE PRICES.—The index number of the Census and Statistics Office, on the base 1909-13 = 1000, rose 12 points to 1813 in October. The principal changes were increases of 2.8 per cent in agricultural produce, of 3.5 per cent in the groups wool, hides, tallow, butter and cheese, and of one per cent in chemicals and manures. There was a decline of 1.7 per cent in building materials.

COST OF LIVING.—The official index number of retail prices of food in 25 towns, on the base prices in 4 chief centres in 1909-13=1000, was 1656 in October, an increase of 1.3 per cent. Dairy produce and meat both rose and groceries remained unchanged.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base 1913=100, showed practically no change in the general level of wholesale prices from October to November, the number being 157.7 as compared with 157.6. Farm products declined 1 per cent from the October level, as did clothing materials and house furnishing goods. Prices were higher in all other groups, ranging from less than 1 per cent in the case of building materials and chemicals and drugs, to 3 per cent in the case of miscellaneous articles. The index number of the group fuel and lighting rose 1.8 per cent although quotations for anthracite coal were omitted.

Gibson's index number of 22 articles of food, on the Dun system of weighting, was 91.4 in December, an increase of 2.8 per cent over the November average. This made the average for the year 1925 90.2, an increase of 14.5 per cent over the yearly average for 1924, and the highest since 1920.

COST OF LIVING.—The index number of the Special Commission on the Necessaries of Life of the cost of living in Massachusetts, having as base average retail prices in 1913=100, recorded an increase of one-half of one per cent in November, owing to higher retail prices of food, clothing and fuel. Foods went up about 0.7 per cent, due to increases in the prices of potatoes, eggs, cheese, meal, rice, flour, onions, evaporated apples and dried beans, which were partially offset by slight decreases in prices of meat, lard, tea, coffee, sugar, molasses, prunes and vinegar. Fuel and light showed an increase of 2.9 per cent, due to higher prices of anthracite coal. The clothing index rose slightly owing to increases in the prices of gloves, women's underwear, and shoes.

INDUSTRIAL RELATIONS IN THE UNITED STATES

The following "statement of social ideals" was adopted recently at a meeting of the National Council of the Congregational Churches of the United States:—

(1) A reciprocity of service, group interests, whether of labour or capital, must always be integrated with the welfare of society as a whole, and society in its turn must ensure justice to each group.

(2) A frank abandonment of all efforts to secure something for nothing, and recognition that all ownership is a social trust involving Christian administration for the good of all and that the unlimited exercise of the right of private ownership is socially undesirable.

(3) The abolition of child labour and establishment of standards for the employment of minors which will ensure maximum physical, intellectual and moral development.

(4) Freedom from employment one day in seven, and the eight-hour day as the present maximum for all industrial workers.

(5) The provision of safe and sanitary conditions, especially protecting women, and adequate accident, sickness and unemployment insurance, together with suitable provision for old age.

(6) An effective national system of public employment bureaux to make possible the proper distribution of the labour forces of America.

(7) That the first charge upon industry should be a minimum comfort wage.

(8) Adequate provision for impartial investigation, publicity, conciliation and arbitration in industrial disputes.

(9) The right of labour to organize with representatives of its own choosing and, where able, to share in the management of industrial relations.

(10) Encouragement of the organization of consumers' co-operative societies for the more equitable distribution of the essentials of life.

(11) The supremacy of service, rather than the profit motive, in the acquisition and use of property on the part of both labour and capital, and the most equitable division of the product of industry that can be devised.

FUEL SUPPLIES AND THE STRIKE OF ANTHRACITE COAL MINERS IN THE UNITED STATES

IN previous issues of the LABOUR GAZETTE reference was made to the strike of anthracite coal miners in the United States on September 1, 1925, negotiations for a renewal of the agreement, then expiring, having been unsuccessful (LABOUR GAZETTE, December, 1925, page 1235).

The President of the United States, in his message to Congress at the opening of the session in December, advocated legislation to carry out some of the recommendations of the United States Coal Commission, including those for federal regulation of the anthracite coal industry during an interruption in mining, and that regional consolidation of the mines should be brought about. A number of bills were introduced by members of Congress to provide for regulation by the Government.

The municipal authorities in the anthracite mining districts in Pennsylvania, meeting in Harrisburg on December 16, after the rejection of the proposals of the State Governor in November by the operators, proposed to call a meeting of the two parties to the dispute a week later at Scranton. The operators agreed to come if it was understood neither party would bring up for discussion the Governor's proposals. The union officials stated they would consider other proposals but would bring up for discussion the Governor's proposals. Accordingly no conference resulted.

Towards the end of December, the scale committees of the two parties to the dispute met at New York, to resume the negotiations broken off at Atlantic City on August 4. The chairman of the joint conference brought down a proposal for a ten-year agreement, the 1925 wage scale to be in force till September, 1926, and a board of nine, three appointed by the operators, three by the miners, and three by the President of the United States, to sit in at all conferences regarding changes from the previous agreement, and to decide all matters not agreed on within sixty days. The miners rejected this proposal on the ground that it would provide for arbitration for the next ten years. The conference lasted until nearly the middle of January, when it broke up without result. In the meantime the Governor of Pennsylvania summoned the State Legislature to meet on January 16, stating that he would propose legislation to provide for regulation of the anthracite coal mining industry.

The fuel supply and markets continued during December in about the same condition as during November, the prices for coke and other substitutes for anthracite becoming firmer when the weather became cold, or whenever the probability of the strike being prolonged appeared great. Coke at the ovens rose from $4.50 per ton to $6, and later to $8 per ton. Supplies of anthracite coal in dealer's hands were reported to be very small toward the end of the year. The mining of bituminous coal continued to be much above the average in recent years.

In Canada, the Dominion Fuel Board continued to collect information as to supplies and as to possible sources of supply and means of transportation for districts where scarcity might develop during the winter. Anthracite coal from Wales and from Scotland continued to be imported into the Maritime Provinces and Quebec, supplies going to Montreal and adjacent districts by rail from the coast after the close of navigation on the St. Lawrence River. At the close of navigation there were substantial stocks of British anthracite coal at Montreal.

Prices showed some advances, retail prices in some sixty cities in Canada averaging $18.02 for December, as compared with $17.41 for November; $16.77 for October; $16.68 for September; $16.56 for August, and $16.71 in December, 1924. In a small number of cities in Ontario and the East, anthracite coal was off the market in December. In the winter following the anthracite coal strike in 1922, from April to September, the average price of anthracite coal in Canada was up to $18.28 in December, 1922, and up to $18.88 in March, 1923. A general strike of bituminous coal miners had coincided with the strike of anthracite miners on that occasion and coal of all kinds was scarce for some time and coke as a substitute for anthracite was not available in large quantities.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Tools of Workman Exempt from Seizure when Workman is following his Trade

The Exemptions Act (Revised Statutes of Saskatchewan, 1920, chapter 51, section 2, subsection 7) includes among the real and personal property of an execution debtor "the tools and necessary implements to the extent of $200 used by the execution debtor in the practice of his trade or profession." In a case involving the question whether the work of a telephone line repair man is a "trade," and whether an automobile is a "tool" or "implement" within the meaning of this subsection, the Court of Kings Bench in the Province found that in order to be entitled to an exemption with respect to the tools or implements of his trade the debtor must have been actually following the trade at the time of the seizure.

(Saskatchewan—McLeod versus Girvin Central Telephone Association et al)

Hospital Board Held Responsible for Actions of Employees

A patient who had undergone a successful operation in a hospital received personal injuries in the feet through the negligence of one of the nurses in applying overheated water bottles which resulted in burns. These injuries detained him in hospital for about seven weeks after his recovery from the operation, and caused a permanent destruction of tissue in one foot. The patient brought action against the hospital board for damages for his injuries. The Supreme Court of Alberta found that the question of the board's responsibility resolved itself into one of the nature of its contract with the patient. The board contended that its obligation was limited to the furnishing of qualified and competent nurses, and claimed that this obligation had been met. The Court, however, decided that the contract required the Board to supply proper and sufficient nursing, and therefore held the board liable for the personal injuries of the claimant, the amount of damages allowed being fixed at $1,200.

(Alberta—Eek versus High River Municipal Hospital District No. 11.)

Municipalities May Not Discriminate Against any Race in granting Licenses for Female Employment

A Chinese restaurant proprietor, in accordance with the requirements of the Female Employment Act (Revised Statutes of Saskatchewan, Chapter 185), applied to the city council of Regina, Saskatachewan, for a license to employ white women to work in his restaurant and rooming house. The Act provides as follows:—

> Section 2. No person shall employ a white woman or girl in any capacity requiring her to reside or lodge in or to work in any restaurant or laundry, without obtaining a special license for the purpose from the municipality in which such restaurant or laundry is situated, which license the council of every municipality is hereby authorized to grant.

The Chinaman's application for a license was supported by the municipal license inspector and by the chief constable, but was strongly opposed by the representatives of certain women's societies. The Council refused the application, and the Chinaman brought an action in the Court of King's Bench to have the Council's resolution declared invalid.

The Court in giving judgment said that "the aldermen who voted against the resolution did so because the plaintiff employed a number of Chinamen on his premises, who, owing to the restrictions placed upon them by our Federal laws, have not been permitted to bring their wives into this country. Hence they feared that such employees would constitute a menace to the virtue of the white women if the latter were allowed to work on the same premises with them. None of these witnesses questioned the plaintiff's own good character, while nearly all admitted that it was excellent."

The judgment pointed out that the council's decision suggested that if the plaintiff, instead of employing Chinamen, had employed an equal number of white men, matrimonially unattached, no member of the council would have considered it, though the menace of the virtue of the white women might well be greater in the latter event, since there would exist no racial antipathy to be overcome between them and the white men. Moreover, it was clear from the evidence that the question of the racial origin of the male employees had never been raised by the Council as a reason for refusing a special license to any white restaurant keeper who applied for it, though it was common knowledge that white restaurant keepers do frequently employ Chinamen on their premises "which suggests the seemingly absurd conclusion that when a Chinaman is employed by a Chinaman, however respectable the latter may be, the former is a menace to the white women's virtue, while, when the white man employs him, he is not. Such facts,

when carried to their logical conclusion, go far to confirm the evidence of those witnesses who testified that the Council refused the plaintiff's application because he was a Chinaman. I think, therefore, that I must find that the Council really refused the license in this case upon racial grounds."

The judgment proceeded to outline the history of this legislation, showing that the Legislature had deliberately abandoned the principle of discrimination against any particular race in the matter of licenses. The Female Employment Act, as originally passed by the Legislature, constituted a discrimination against Chinamen and other men of Oriental origin by absolutely prohibiting the employment of white women to work in any restaurant, laundry or other place of business, owned, kept, or managed by a Japanese, Chinaman or other oriental person (Statutes of Saskatchewan, 1912, chapter 17, section 1). This enactment was amended by the statutes of Saskatchewan, 1912-13, chapter 18, by striking out the words, "Japanese," and "or other oriental person," which left it applicable to Chinamen alone. Subsequently the said enactment was repealed altogether by the statutes of Saskatchewan, 1918-19, chapter 85, and a new enactment substituted, which has been re-enacted in its present form in the Revised Statutes of Saskatchewan, 1920, chapter 185, as stated above.

"It would be strange," the Court commented, "if the municipalities to which has been delegated authority of granting such special licenses could now go on and maintain the discriminatory principle which the Legislature had been at such pains to abolish."

The resolution of the council was therefore declared invalid and the plaintiff was granted a *mandamus* requiring the defendant to grant the desired license.

(Saskatchewan—Yee Clun versus City of Regina.)

Transfer Card must be Accepted by Local Union

A sheet metal worker living at Pittsburgh, Pa., on removing to Cleveland, Ohio, received a transfer from the Pittsburg local of the Amalgamated Sheet Metal Workers' International Alliance with the expectation of procuring work at Cleveland as a union man. The constitution of the union makes the acceptance of such a transfer mandatory upon the local to which it is presented, unless a strike or lockout is in existence. The Cleveland local, however, repeatedly refused the application in this case, and the applicant finally instituted a suit for damages on account of the loss incurred by him. Judgment was given in his favour in the district court, being later affirmed in the circuit court of appeals. A preliminary question was as to whether or not there was at the time when the card was presented a strike or lockout, such as would permit the card to be rejected within the terms of the constitution. There were negotiations with employers for an adjustment of the wage scale, and it was claimed that this was the equivalent of a lockout. The court rejected this view.

In regard to a claim that the court could not intervene to review the action of the union the court found that in some cases such a right might not exist, but that the present case was an action for damages to redress a wrong. "A general rule is that one who has been wrongfully suspended or expelled from an association may abandon his claim to membership and resort to an action for damages for the wrong done."

Legal Decisions in United States

The United States Department of Labour recently issued the eleventh bulletin in the series entitled "Decision of Courts Affecting Labour." This publication covers the year 1923-24. A number of decisions of outstanding interest were rendered during this period. The unsettled dispute as to liabilities in the Coronado case, relative to the capacity and responsibilities of labour organizations, decisive rulings as to the status of the Railroad Labour Board and the Kansas Industrial Court, a wide range of substantive provisions and administrative problems of workmen's compensation, questions of construction and constitutionality as regards minimum wage laws, and a variety of cases involving the status and powers of labour organizations in their different aspects and activities, the application of the antitrust law to such organizations and to employers' associations, and the constitutionality of a number of statutes relative to wage payments, the licensing of occupations, restrictions on Sunday labour, etc., make the bulletin one of interest to the workingman.

Addendum on Wages in Agriculture 1914-1924	44

WAGES AND HOURS OF LABOUR IN CANADA, 1920 TO 1925

THE present bulletin is the ninth in the series on Wages and Hours of Labour, the first having been issued as a supplement to the LABOUR GAZETTE for March, 1921, and giving figures as to wages and hours of labour in certain trades in various cities in Canada from 1901 to 1920, with index numbers by groups based on wages in 1913 as 100. Reports numbered two, three, four and six in the series continued this record with certain additions. Report No. 5 dealt with Hours of Labour in Canada and Other Countries. Report No. 3 contained also statistics of wages and hours in coal mining in Canada from 1900 to 1921 with index numbers for the three principal districts and Report No. 7 covered the years 1920 to 1924 and included figures for agriculture from 1914 to 1923. Report No. 8 gave additional statistics for factories, etc., for 1920 to 1924.

The main object of these reports is to show the changes in wage rates and in hours during the periods covered. In each report the figures given constitute as far as is possible a continuous record and in each instance throughout the report the figures are from the same source, continuity being thereby assured within reasonable limits. The figures in each report are not necessarily in continuation of those in previous reports as from year to year more sources of information are available.

In the building trades, metal trades, printing trades and in employment on electric street railways the figures are given for thirteen cities throughout Canada. Information is secured from union agreements and from reports of representative employers and of trade unions secured each year. These reports are supplemented by figures secured by officers of the Department and by correspondents of the LABOUR GAZETTE resident in each city. The statistics as to building trades show the prevailing rates of wages and hours of labour for eight classes of labour for the years 1920 to 1925 inclusive for the building season beginning in the spring of each year. In the metal trades the figures are for metal manufacturing industries and do not include wages in the metal trades on railways, in mining, construction, etc.

Wages in manufacturing and various other industries are shown by samples. For common labour in factories, these are given by localities. The figures are secured from reports from employers and from such union agreements as are available.

On steam railways, wages of employees on the regular staffs are fixed according to agreements between the several railways and the organizations of railway employees, the principal railways paying the same rates to nearly all the principal classes. The figures published are taken from these agreements.

In coal mining, the wages in the principal districts are arranged by agreements between the coal mining operators and the employees, in some cases represented by unions and in others committees of employees. The figures published are taken from such agreements. In some of the mines in each district the wages of unorganized employees are somewhat lower than those in the agreement. In metal mining the rates of wages and hours of labour are shown as samples for mines in the various parts of Canada.

For civic employees wages of policemen, firemen and labourers are included and shown by localities. For laundries, grain elevators, telephones, and electric current production and transmission the figures are given by samples, as for factory labour.

Index Numbers of Wage Rates

In Report No. 1 tables of index numbers were given in order to show the general trend of the movement in rates of wages. The first set of index numbers was for the rates of wages from 1901 to 1920 in the thirteen selected cities. For each series of rates, that is, for each trade or occupation in each locality, index numbers were calculated both from the hourly rates and from the weekly rates, and these index numbers were averaged for all localities, by groups, thus indicating the percentages of changes in weekly rates and in hourly rates. The year 1913 was taken as the base period, that is, the rate for 1913 in each case was taken as 100, so that the index numbers showed the percentages of changes from time to time prior to and since that date. An average was also made for all of the series in these tables, in order to indicate the general trend in wages in such trades as a whole. In making the average index numbers the simple arithmetical averages were taken. In Report No. 3 this table of index numbers for the thirteen cities was brought down to September, 1921.

In subsequent reports the table of index numbers of hourly rates only since 1901 have

13166—1½

been reproduced, the figures since 1921 being calculated by ascertaining the average increase or decrease per cent in the figures for each group each year from the figures for the preceding year and adjusting the group index number accordingly. The index numbers therefore show approximately the movement of wage rates in each group for the past year as compared with the movement in previous years and show current levels as compared with levels in 1913. In Report No. 3 index numbers of daily rates in coal mining were given, calculated in the same manner as the index numbers in Report No. 1. The index number for the coal mining group since 1921 was calculated in the same manner as those of the other groups.

labour unions. The statistics given in these tables, therefore, show wage rates and hours of labour in a number of organized occupations in certain cities at the dates under review. They do not, however, indicate the changes in wages outside of industrial centres.

The index numbers calculated from sample rates of wages show to some extent the trend of wages for labour in factories, and for the lumbering industry as compared with the changes in the classes mentioned above.

Changes since 1920

The table of index numbers here given includes the figures referred to above for each group with yearly averages for all groups for which figures are available from 1901 to 1925.

TABLE OF INDEX NUMBERS OF RATES OF WAGES FOR VARIOUS CLASSES OF LABOUR IN CANADA
1901-1925

(Rates in 1913 = 100)

Year	Building Trades	Metal Trades	Printing Trades	Electric Railways	Steam Railways	Coal Mining	* Average	Common Factory Labour	Miscellaneous Factory Trades	Logging and Sawmilling

*Simple average of six preceding columns.

A table of index numbers of wages for factory trades, for common labour in factories, and for lumbering, calculated from the sample rates published was also given for the period 1911 to 1920 in Report No. 1. This was brought down to 1924 in the same manner as the other index numbers since 1921 were calculated.

The classes of labour for which rates were used for the calculation of the index number table for the period 1901 to 1925, are, in the main, skilled trades; and practically all of these, even the unskilled, are in most cities organized to a great extent in trade and

It will be seen that by 1920 wages had reached levels almost one hundred per cent higher than in 1913, in some groups the increase being over one hundred per cent while for the building trades and steam railways the increases were appreciably less, being only about eighty to eighty-five per cent. Since 1920 all groups have shown some decreases, although printing trades and coal mining were higher in 1921 than in 1920, declining somewhat thereafter, the decreases in coal mining in 1925 being comparatively steep and tending to reduce the average for all groups.

In the building trades up to 1919 there were smaller increases than in any of the other groups, but in 1920 there were considerable increases. In 1921 decreases of 10c. per hour were general and in 1922 decreases of 5c. per hour were numerous. In 1923, 1924 and in 1925 while there were upward movements in the averages it was due to increases in particular trades and in certain cities and not to an upward movement general for most of the trades and localities.

In the metal trades the increase in wage rates up to 1920 was greater than in most of the other groups, there being a good demand for labour in the manufacture of munitions. During the industrial activity in 1919 and 1920 further increases were made, but in 1921 and 1922 considerable decreases were made. In 1923 and 1924 some recovery was experienced, but in 1925 there was practically no change.

In the printing trades up to 1920 increases were about the same as in the building trades, but in 1921 when many of the three or five year agreements between employers and the unions expired rates were advanced and hours were reduced in many cases. Since 1921 there have been some reductions but these were only in a few localities and in some cases were followed by increases later.

In electric railway service, rates had almost doubled by 1920 but declined slightly in 1921 and 1922 but recovered somewhat in 1923 and very slightly in 1924 and 1925. Reductions in rates were general in 1921 and 1922.

In steam railway employment, wage increases were considerable in 1918, 1919 and 1920, but in 1921 decreases averaging about twelve per cent for all classes were made and in 1922 decreases for shop crafts, maintenance of way employees and for freight handlers, clerks, etc., were made averaging about ten per cent.

In coal mining the index number reached its peak in 1921, increases having been made in the closing weeks of 1920. In 1922 decreases were made in some districts and in other districts in 1923 and 1924. In 1925 decreases occurred in the three principal districts, being especially steep in Alberta and southeastern British Columbia (as in 1924) where no decreases occurred until 1924.

In wages for common factory labour rates had more than doubled by 1920 but fell steeply in 1921, again in 1922 and slightly in 1923 but recovered a little in 1924 and in 1925. In miscellaneous factory trades the recovery began in 1923 but also appeared in 1924, a decrease appearing in 1925 in the average.

In lumbering considerable decreases appeared in 1921 with recoveries in each year thereafter until 1925 when reductions again occurred.

TABLE I.—RATES OF WAGES AND HOURS OF

(a) BUILDING

Occupation	Halifax		St. John		Quebec		Montreal		Ottawa		Toronto

1926

PRICES IN CANADA AND OTHER COUNTRIES DURING 1925

DURING 1925, economic conditions and political events in Europe and America exerted their influences on the course of prices and the cost of living in the various countries. Among events affecting the international situation and influencing the course of trade, industry and prices in Europe were the beginning of the working of the Dawes plan for solving the problem of reparations, and the Locarno conference and security pact, the effects of which on trade and industry are still uncertain. In America, crop and business conditions were favourable and there was little change in the prices level.

According to the report of the Agent General for Reparation Payment, the first year's working of the Plan proceeded smoothly. The report discusses the foreign trade situation and attributes the excess of German imports partly to influence of foreign loans and partly to new tariff policy. To quote from the report there are two factors, first that the problem of German exports is in part a function of European tariff policy generally, and "under the conditions now confronting most European trade it is a question whether those obstacles to trade may not also prove uneconomic even from the point of view of the countries which erected them" and "underlying the whole situation and frequently with a controlling influence on the course of trade and the movement of prices will be the general conditions and credit, which depend largely upon the credit policy of the Reichsbank, and the policy of the German public authorities in the administration of funds and their disposal."

Closely connected with the question of price levels is the position of foreign exchange on which *Commerce Monthly* for January, 1926, commented as follows:—

"The international financial and political situation is materially better than a year ago, and despite continued uncertainty in some European countries, the outlook is for further progress toward exchange stabilization in 1926. The outstanding development of 1925 was the re-establishment of the gold standard in Great Britain and the British Dominions, the Netherlands and the Netherlands East Indies. The greater part of the world except Latin Europe is now on a gold basis so far as trading relations are concerned, and the era of post-war exchange speculation is drawing to a close.

"With the recent raising of the British bank rate and the cessation of seasonal pressure the export of gold from Great Britain appears practically to have ceased. The weakest spot in the exchange situation is France and it is increasingly clear that a united public opinion and national courage in backing the Government of that country in drastic measures will be necessary before exchange stability is in sight.

"The general advance in the leading exchanges of South America and the Far East which took place during 1925, like the improvement in the European exchanges, is the result of the gradual stabilization of business in some countries and steps toward sounder currency conditions in others."

The currencies of Belgium, Italy and France declined during the year, the last named the most seriously, causing prices in these countries to rise sharply. The movement is in contrast with that of prices in those countries in which exchange has been stabilized, where the index numbers showed in general a tendency to remain stable or even to fall.

Prices were also influenced by crop conditions throughout the world. The monthly report of the National City Bank of New York for January, 1926, contained the following comment on the agricultural situation:—

"The relative position of the farmer in the markets has been on the whole maintained in the past year. The wheat producers have not had as large a crop as in 1924, but the price to this time has averaged higher than over the corresponding months last year. Excluding Russia, the world crops of wheat, oats, rye and barley were considerably larger than in 1924, notwithstanding our own diminished yield. In wheat, the increase in Canada nearly offset the decline in this country, the total production of the two countries have been 1,124,724,000 bushels in 1924 and 1,091,692,000 bushels in 1925. In Europe the yields of all grains were much better in 1925 than in 1924. In September the talk in European markets was that Russia would have large exports, this opinion being based on selling offers by the Soviet Government. Actual exports, however, have been small, and the government has since given out word that the crop is not as large as expected. The Russian promises caused European importers to hold off on purchases, depressing prices in all markets, the lowest

13378—1½

point on the crop touched at Chicago being $1.32¼ per bushel for the December delivery, reached early in October. At that time the promise in Argentina and Australia was for crops at least as large as the last harvested, but unfavourable weather later reduced them. With these changes in the supply situation, European buyers turned to the United States and Canada, and prices advanced rapidly. The market has been very unsettled for the past month, owing to conflicting report from Argentina, but on December 29 the price at Chicago for the December delivery rose to $1.89. Fortunately, the United States crop has moved slowly, and no very large share of it was sold at the low prices."

The trend of wholesale prices and the cost of living for the year 1925 is shown in the accompanying tables of index numbers. The index numbers for some of the principal countries are also given, by groups in the case of wholesale prices, and in the case of the cost of living index numbers, by elements of the budgets. The figures for previous years are shown at intervals of six months, and the year under review by months, or as published, complete to the latest period for which information was available.

Great Britain

According to the Board of Trade index number, prices in Great Britain showed a slight but steady decline throughout the year. This tendency was seen both in foods and non-foods. Of the former, the most extreme drop was in cereals, which fell from 187.3 in January to 148.1 in October, recovering slightly in November. In materials, the sharpest decline was in cotton, which fell from 230.0 to 182.4, or 20.7 per cent. Other textiles fell 15 per cent, from 214.0 to 181.0. Iron and steel fell 12.3 per cent.

The cost of living index number of the Ministry of Labour showed a decline of from 180 in January to 177 in December. This was due to lower food prices, the index number for foods having declined from 178 to 174 in the period under review. Rent and sundries remained steady; clothing fluctuated slightly; and fuel and light declined 5 points to 180.

France

The index number of the General Statistical Office rose during the year from 525 in January to 618 in November. Owing to political conditions, the value of the franc continued to fall, being responsible, for the most part, for the increasingly steep rise in prices toward the end of the year. Foods rose 10 per cent, and industrial materials rose 23 per cent. All groups contributed to the movements.

Germany

The index number of the Federal Statistical Office fell during the year from 131.3 in January to 121.1 in November, or 7.7 per cent. All groups showed declines except the group fats, sugar, meats, and fish, and the group colonial products and hops. Cereals declined 25.6 per cent. Farm products declined 16.4 per cent, compared with a decline of 19.6 per cent in industrial materials. Goods produced declined 14.0 per cent, while goods imported declined only 6.2 per cent from their high level at the beginning of the year, so that these groups at the end of November stood at 112.5 and 164.1 respectively.

The new cost of living index number of the Federal Statistical Office, for which figures are available since February, 1925, showed an advance of from 135.6 in February to 145.0 in August, and declined to 141.4 in November. The index was revised and made to include sundries, including travelling expenses. This group showed an increase of from 177.1 to 188.7. Foods rose from 145.3 to 154.4 and then declined to 146.8; heat and light rose from 138.0 to 142.1; rent, from 71.5 to 89.2; and clothing, from 172.4 to 173.2.

Italy

Bachi's index number of wholesale prices rose from 657 in January to 731 in August, and then fell to 716 in October. The rise was due to political conditions and the fall of the lira. Consequently, upon conclusion of the settlement of the debt to America, and the formulation of plans for stabilizing exchange, the lira improved in value and prices began to decline.

United States

Prices and general business conditions in the United States in 1925 received the following comment in the Bulletin of the National City Bank of New York, for January, 1926:—

"The business record of 1925 has justified the favourable expectations generally held at the year's beginning. The common opinion in business circles at the time was that a degree of equilibrium and stability had been attained in our industries which gave promise of a high state of prosperity, probably for some years to come. The volume of trade as measured by such trustworthy indices as tonnage carried by railroads and payments through banks, has been the largest ever known.

"The increased volume of production has yielded larger net earnings to the industries

than in any year since the boom times when the profits proved to be largely illusory. In the first half of the year complaints were common of the absence or meager rate of profit, but corporation reports in the last half have made a good showing. This has been accomplished with little change in the price level. The index number of average prices of over 400 commodities, as calculated by the Bureau of Labour, in November, 1925, was 158 against 157 in December, 1924. The groups classified as "Farm Products," "Cloths and Clothing," 'Metals and Metal Products," and "Housefurnishing Goods" were slightly lower, while "Fuel and Lighting," due to the anthracite coal strike, "Building Materials," and "Miscellaneous" were slightly higher, and "Chemical and Drugs" remained unchanged. The average shows a desirable degree of stability, notwithstanding the increased activity in industry and speculation in real estate and the stock market.

"The manufacturing industries are generally prosperous. The cotton goods industry, which has been depressed over the last three years by the high cost of its raw materials, is much encouraged by the large crop of cotton. The woollen and worsted industries, although somewhat depressed, are helped by the lower prices of wool which have prevailed throughout the year, although these prices have not been distressingly low to producers. The silk industry has had the largest year's business ever done, and the new rayon industry is growing with great rapidity. Consumers' goods generally are in strong demand, the result of practically full employment for the wage-working population at good wages."

Cost of Living.—The following is an extract from the annual report of the Special Commission on the Necessaries of Life to the General Court, January, 1926.

"The 'cost of living' in Massachusetts as indicated by retail prices of commodities in common use increased about 4% during 1925. Most of this increase took place in the latter part of the year and was largely due to higher food prices, which increased about 9% during the year.

"The Commission in its last annual report discussed what appeared to be the beginning of a so-called business cycle. Optimism was widely expressed by trade authorities and students of business conditions that we were entering upon another great period of business expansion and prosperity. Speculation in security markets was active in anticipation of the impending business boom. This activity continued throughout the year with advancing prices. Retail prices, particularly of food commodities, advanced during the year. Most of the food consumed in Massachusetts is produced outside the Commonwealth, therefor, but few of our citizens were directly benefited by the higher food prices.

"During 1925 there were a few spotted wage increases, but the trend of wages was slightly downwards. Business conditions in general were good and deposits in savings and co-operative banks increased.

"Prices are meaningless when considered apart from income or purchasing power. Since 1913, the increase in the rate of wages as a whole has been greater than the increase which has taken place in the cost of living. Salaries have not advanced to the same extent as wages and in some cases have not increased as much as commodity prices. Those who have lived on a fixed income have suffered the greatest loss of purchasing power. Many families have been able to make desirable improvements in their standard of living due to the fact that the increases in their incomes have been relatively greater than the increase in the cost of living. This condition has expanded the purchasing power of vast numbers of consumers and has resulted in great business activity.

"One of the most significant things shown by the comparative record of retail prices (cost of living index) is the fact that there seems to be a definite trend back to the relationship between prices of different commodities which existed prior to the war. For example: On January 1, 1922, there was a difference of 47 points between food prices and clothing prices; on January 1, 1925, the difference had decreased to 37 points, and on January 1, 1926, the difference between food prices and clothing prices was only 31 points.

"A review of general price trends of commodities in the United States since 1800 indicates that during and following the War of 1812 and the Civil War prices rose to exceedingly high levels. After the War of 1812 and the Civil War, prices declined to a point as low as before the war. From 1865 to 1896, thirty years of peace, prices fell from a very high level to the lowest level of the century, which was reached in 1896. There were several short rises during this period which on the whole was an era of great industrial progress and general prosperity. The development of mechanical power and the skill of our workers was largely responsible for this condition.

"From 1896 to 1914 prices showed a gradual increase. In 1910 the General Court of Massachusetts appointed a special committee to study the increasing cost of living. During

this period the Spanish, Boer and Japanese Wars occurred.

"From 1914 to 1920, the so-called World War period, prices more than doubled. During 1920 and 1921 a sudden deflation of prices took place, amounting to about 25%. Since 1922 prices have been fluctuating at a level about 60% above that prevailing in 1913.

"Whether or not the cost of living will ever return to the pre-war level or find some new level is a question that the future will determine. Some students of economics state that the present level of prices will be more or less permanently stabilized, others claim that the general trend of prices will be downwards towards the level which existed prior to the war. The Commission believes that prices over a long period will show a general decline similar to that which occurred in the period of peace following other wars."

Retail Prices and Cost of Living in Canada

As stated in the first report on prices issued by the Department, "Wholesale Prices in Canada, 1890-1909," it was intended to construct a retail prices index number in order to indicate more accurately from month to month the changes in the cost of living. In the meantime the Department began the publication in the February, 1910, issue of the LABOUR GAZETTE, of the retail prices of staple foods, coal, wood, coal oil, and rent in nearly sixty cities. These figures were averaged for each year and published in appendices to the Department's annual reviews of Wholesale Prices in Canada from 1911 to 1917.

During the investigation into the Cost of Living in Canada by the Board of Inquiry, appointed in December, 1913, statistics for this list of goods were obtained for December, 1900, and December, 1905. From these figures and from those published in the LABOUR GAZETTE for December, 1910, 1911, 1912, and 1913, respectively, series of index numbers of food, and of fuel, light, and rent were calculated, the results being published in the report of the Board. Calculations were also made of the cost of a weekly budget for an average family of five in terms of the prices of these commodities, and this calculation has

been kept up to date, month by month, and published in the LABOUR GAZETTE each month since August, 1915.

In addition to the statistics as to retail prices of food and fuel, and as to rates for rent, the Department, since 1919, secured figures as to retail prices of staple lines of clothing, including footwear, from retail dealers throughout Canada, for the years 1913-1920. The figures relate to prices prevailing at the end of the year in each case, but since 1920 prices during the spring have been secured. From these quotations the percentages of changes in the cost of clothing have been calculated. Information was also secured as to the prices of household supplies, furniture, furnishings, etc., and an estimate has been made as to the percentage changes in the cost of miscellaneous items, the effect of the information gathered showing that such changes are approximately equal to the average changes in other items. These percentages of changes in the cost of clothing and sundries, with the percentage changes in food, fuel and rent, calculated from the weekly budget published in the LABOUR GAZETTE from month to month, constitute a tentative cost of living index number, weighted according to the family budget method, based on prices in 1913, pending the calculation of a more complete index number in process of construction. The figures in clothing and sundries are to be regarded as merely approximate owing to difficulties in dealing with apparent changes in the grades of the items for which quotations are obtained. This calculation was first published in the LABOUR GAZETTE in March, 1921, and has been published from time to time since, quarterly figures being given for each year as in the accompanying table.

The accompanying tables of family budget figures show the movement by commodities in terms of average prices for the Dominion and by groups for each province.

The cost per week for the family budget of twenty-nine staple foods was on a somewhat higher level during 1925 than at any time

(a) Figure for previous month. (b) Average for year. (c) Index published quarterly. (d) 15th of month up to of month. (h) Four chief cities. (i) January 1913–December 1920, 22 foods. (k) Cost of food budget. (l) Gold †Gold prices on the base 100 hereafter.

during the last four years, except for the months of March and April, 1923, and by the end of 1925 was higher than at any time since May, 1921. The higher level was due mainly to the higher prices prevailing throughout the year for flour, bread, pork and bacon, and towards the end of the year to increases also in the prices of potatoes, butter and cheese.

Prices for beef have showed little variation since 1922, except for the usual seasonal fluctuations of a rise from the beginning of the year to midsummer, followed by a decline in the last half of the year. During 1925 sirloin steak rose from an average of 27.1 cents per pound in January to a high price of 30.2 cents in July, and then declined steadily to 27.4 cents in December. Shoulder roast showed a similar movement, advancing from an average of 14.2 cents per pound to 17.1 cents and later declining to 14.7 cents. Prices of mutton have remained steady since 1921, showing a seasonal range similar to that in beef of approximately two cents per pound. In 1925 the price rose from an average of 27.6 cents per pound in January to 29.6 cents in May and then declined to 28.6 cents by the end of the year. Fresh pork was relatively high during 1925; prices during 1923 varied between 24.5 cents per pound and 27 cents; throughout 1924 a somewhat lower level, ranging from 23 to 25.5 cents per pound, prevailed, followed by a substantial advance commencing with a price of 24.1 cents per pound in January, 1925, and continuing until September, when the price of 29.3 cents per pound was reached. By December however the price had fallen to 28 cents. Salt pork, bacon and lard showed a movement similar to that in fresh pork. Salt pork advanced from an average of 23.4 cents per pound in January to 26.9 cents in November and then declined slightly.

end of 1920; beginning of month thereafter. (*e*) Beginning of month. (*f*) Base is average for six capital towns. (*g*) 15th prices hereafter, 1914=100. (*m*) From Jan., 1925, end of previous month. (*n*) No figures published.

Bacon was 33.7 cents in January and 41.7 cents in November. Lard in 1925 fluctuated between a price of 23.3 cents per pound in January and 24.8 cents in November as compared with a low in 1924 of 20.6 cents per pound in June and a high of 23.3 cents in December. The movement in pork and bacon prices resulted from the large supplies of hogs marketed in 1924, due to a decreased corn production in the United States followed in 1925 by diminished supplies with strong British markets.

Eggs showed about the same seasonal fluctuations in 1925 as in previous years, fresh moving from an average of 66.9 cents per dozen in January downward to 34.0 cents in May and then up to 64.7 cents in December. Milk prices showed little variation during the year, being only slightly lower in the summer months. The price in 1924 was somewhat higher than in 1923 or 1925. Butter prices throughout the greater part of 1925 were higher than in the previous year, the usual seasonal decline not being so pronounced. Between January and June an average decline of 3.3 cents per pound occurred, followed by an advance of 10 cents per pound by December when a price of 50.6 cents per pound was reached. The movement in cheese was similar to that in butter, with prices considerably higher at the end of the year than at the beginning. The price advanced from an average of 29 cents per pound in January to 31.5 cents in May. This advance was followed by a slight seasonal decline in July, after which prices advanced to 33.5 cents in December. In the case of both butter and cheese the higher levels in 1925 than in 1924 were due to a strong export demand.

Bread prices throughout 1922, 1923, and the first seven months of 1924 had been quite steady. However, commencing in August,

1924, following a similar movement in wholesale prices of flour and of wheat, prices commenced to advance. From an average of 6.7 cents per pound in July and previously, the price rose steadily to 7.4 cents by December. The increase continued until March, 1925, when a high price of 8 cents per pound was reached. This level was maintained until October, when prices declined slightly, following the decrease in flour and wheat. As in the case of bread, flour prices had been fairly steady till the middle of 1924. The advance commenced in June from an average of 4.1 cents per pound, and continued steadily till March, 1925, to 6.2 cents per pound. Prices then declined slightly the decrease becoming more pronounced by November, when a level of 5.1 cents was reached. The price in December was slightly upward. The price of rolled oats, as with bread and flour, began to advance in the summer of 1924 in sympathy with the movement in grain. Commencing from an average price of 5.4 cents per pound in July the increase continued till March, 1925, when the price averaged 6.4 cents per pound. A slightly lower level was reached in April, which was maintained until the autumn, when another decline occurred, carrying prices down to an average of 5.8 cents per pound. Rice displayed very little fluctuation during 1925, prices however tended to be slightly higher than in 1923 and 1924. Beans were steady throughout the year and changes since 1921 were unimportant. Prices of evaporated apples and prunes also showed little change during the year or as compared with 1924. In December, 1925, the price of

the former commodity averaged 19.8 cents per pound and of the latter 15.7 cents.

The decline in the wholesale price of granulated sugar, which commenced about the end of 1923 and continued with only minor interruptions throughout 1924 and 1925, was reflected in the retail price also. Commencing with an average retail price of 12.1 cents per pound in January, 1924, the decline continued till October, when a slight advance occurred. The decrease, however, was resumed in November and continued throughout the greater part of 1925, from 9.5 cents per pound in January to 7.8 cents in November. The price in December was slightly higher. Coffee prices advanced during 1925 from 57.9 cents per pound in January to 61.5 cents in September.

Potato prices advanced from $1.39 per 90 pounds in January to $1.52 in March, then declined during the next four months to $1.35 in July. In August the usual seasonal increase occurred with the marketing of the new crop and prices rose to $2.10 per 90 pounds, as compared with $2.24 in August, 1924. By the beginning of October, 1925, prices had fallen to $1.49, but during October and November, when usually a decline occurs, prices rose substantially, reaching $2.62 at the beginning of December. A short crop in the United States brought about extensive buying in Canada for United States consumption, resulting in much higher prices.

In fuel, prices in 1925 as compared with 1924 were lower in January but somewhat higher in December. The increase was

(a) Quarter beginning in specified month. (b) Average for year. (c) Figure for previous month. (d) Following month. index number (38 commodities) and all converted to base 1913=100. For 1920 and 1921, 76 quotations are included, and from

greatest in the prices for anthracite coal, caused by the scarcity due to the strike in the coal fields in the United States. By the end of 1925 anthracite coal had advanced to $18.02 per ton, as compared with $16.57 in August, before the commencement of the strike, and $16.82 in January. In 1924 the price was $17.84 in January, $16.69 in August and $16.71 in December. Prices at the end of 1925 were still considerably below the peak price of $18.88 per ton in March, 1923, resulting from the strike in 1922. Wood prices showed little change.

Very few changes occurred in rent during the year.

Wholesale Prices in Canada

The feature of the movement in wholesale prices was the higher level for grains. The increase in the autumn of 1924, due to crop shortage throughout the world, was followed by a substantial decrease in the first part of the year, in turn followed by an increase in the latter months of 1925. Prices of grain at the end of the year, however, were lower than at the beginning, but higher than the average since 1921. Prices of livestock and meats were also relatively higher than since 1921, and also higher than at the end of 1924. Exports of cattle to Great Britain were re-

(e) Middle of month. *(g)* First of month. *(k)* End of month. *(j)* Monthly average. *(k)* New index number is joined to old January, 1922, 100 quotations. *(l)* Gold Prices hereafter on the base 100. *In milliards.

ported to be much larger during 1925, being nearly 100,000 head. There was also increased exportation to the United States. Hogs were similarly high in price and experienced a good demand, owing to strong market conditions in both Great Britain and United States. Butter was substantially higher in 1925 than in 1924, due largely to a strong export demand. Cotton was lower due to the large crop in the United States. Wool declined from the beginning of the year until the autumn, when an advance occurred. The lumber market showed relatively little change. Pulp and paper continued in good demand, and newsprint paper, which had been weakening, tended upward. Iron and steel was lower at the end of the year but manufactured goods showed little change. Non-ferrous metals varied in the price movement. Copper was little changed, nickel tended upward. Lead was lower at the end of the year but still somewhat higher than in previous years. Zinc was upward and also higher than in previous years. Silver was relatively higher. Coal was low until the latter part of the year when the anthracite coal strike in the United States and the improving industrial demand, both in Canada and the United States, caused an upward movement. Petroleum and gasoline recovered early in 1925 from the considreable decline during the latter part of 1924, and continued during the summer at the higher levels, falling slightly in the autumn. In chemicals and allied products an advance in coal tar appeared.

REPORT OF

PROVINCIAL ROYAL COMMISSION

ON

COAL MINING INDUSTRY IN NOVA SCOTIA

Reprinted by the Department of Labour of Canada and Issued as a Supplement to the "Labour Gazette" January, 1926

OTTAWA
F. A. ACLAND
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1926

ROYAL COMMISSION ON COAL MINING INDUSTRY IN NOVA SCOTIA

THE report of the Royal Commission appointed by the Nova Scotia Government to investigate the coal industry in that Province was made public on January 11, 1926. The following subjects were referred to the Commission for investigation and report:—

1. (*a*) Income, rates of wages, hours and conditions of employment prevailing in the various classes or occupations of mine workers above and below ground; and whether and if so to what extent and by what means such income, wages, hours or conditions should be varied or revised, having regard to the best interests of the industry and those employed therein;

(*b*) Any inequalities between the different classes of mine workers as regards wages, hours and conditions of employment; and whether and if so to what extent any of such inequalities are unjustifiable or unfair and what remedy or remedies should be applied;

(*c*) Conditions affecting mine workers while in the course of their employment; and whether it is practicable to improve such conditions and if so in what manner and to what extent;

(*d*) The social and domestic conditions under which mine workers live and whether it is practicable to improve such conditions and if so to what extent and in what manner and direction;

(*e*) The cause or causes of the constantly recurring disputes, friction and strife between the operators and their workmen.

2. (*a*) All factors directly or indirectly entering into the cost of production, transportation, distribution and marketing of coal and its by-products by any operator and for as many past years as said Commissioners deem expedient; and whether such costs have been or are excessive and if so to what extent and for what reason or reasons:

(*b*) The capitalization, general financial organization and cost of management of any operator or operators and whether such capitalization, general financial organization and cost of management is or has been excessive and if so to what extent and in what direction such capitalization, general financial organization and cost of management should be revised or reduced in the best interests of the industry.

(*c*) The possibilities of increasing the demand for coal including its utilization as coke.

3. All such other conditions and matters whatsoever whether of the kind hereinbefore mentioned or not which directly or indirectly have affected or are relevant to the state or condition of the coal mining industry in the Province, as may be deemed expedient by the Commissioners.

4. The word "operator" herein includes:

(*a*) a company or corporation which is incorporated by or under the authority of an Act of the Legislature of Nova Scotia and which is directly or indirectly engaged in operating any coal mine in the province;

(*b*) a company or corporation which is incorporated by or under the authority of an Act of the Legislature of Nova Scotia and which is a shareholder of such first mentioned company or corporation;

(*c*) a company or corporation which is incorporated by or under the authority of an Act of the Legislature of Nova Scotia and which is a shareholder of such second mentioned company or corporation;

(*d*) a company or corporation which is incorporated by or under the authority of an Act of the Legislature of Nova Scotia any share of which is held or owned by any of the aforementioned companies or corporations;

(*e*) a company or corporation which is incorporated by or under the authority of an Act of the Legislature of Nova Scotia and which is a constituent or a subsidiary of or is directly or indirectly controlled or influenced by or is auxilliary or ancilliary to or in any way allied, associated or connected with any of the aforementioned companies or corporations.

TEXT OF REPORT

His Honour JAMES CRANSWICK TORY, Lieutenant-Governor of Nova Scotia.

SIR,—In compliance with the Commission dated 31st October, 1925, we have the honour to report:

We have held sessions at Sydney and Halifax, hearing in all 112 witnesses; and in addition we have visited mines in the Cape Breton, Springhill and Pictou County areas, and inspected housing and social conditions in those districts. We also visited Montreal and inspected the operators' plant there and interviewed important purchasers of coal.

In view of the fact that the British Empire Steel Corporation is responsible for 85 p.c. of the output of the Nova Scotia coalfields, we have thought it proper to confine our investigation, so far as operators were con-

cerned, to that Corporation, although we visited the collieries of several other operators as well. Wherever, therefore, the term "Operators" is used throughout this report, it refers to the British Empire Steel Corporation, except in paragraph 28 (*c*) where we include all operating companies.

So far as the men are concerned, we have regarded District 26 of the United Mine Workers of America as representing the miners of the Nova Scotia coalfields, although we have also heard witnesses from the One Big Union.

Appended is our report wherein we deal, in separate sections, with the matters falling under each of the terms of our reference, and indicate our recommendations thereon; but as a matter of convenience we now summarize the broad conclusions we have reached.

1. Causes of Recurring Strife and Friction

The relations between the operators and the men for a long time have been marred not only by an absence of goodwill and mutual confidence, but even by a spirit of active antagonism. This general state of affairs is not the direct result of any one cause, but the cumulative result of many. We name, in particular:

(i) The opposition which the operators have offered to the men's desire to organize themselves in the U.M.W.A.

(ii) The introduction of Communistic theories and aims into ordinary industrial relationships.

(iii) The reaction of factions within the Union.

(iv) The difficulties experienced in adjusting smaller grievances as they arise in the pit.

(v) The difficulties also that have been experienced in the settlement of larger questions, particularly those relating to wage variations.

(vi) The abuse of conciliation machinery, and the policy of "playing tactics" rather than attempting to understand each other.

(vii) The economic distress arising, particularly in certain districts, from very irregular employment.

We feel that goodwill and understanding can be assured for the future by the operators making an open and frank acceptance of the men's Union, by the men recognizing that unity and strength can only be established within their Union if they are prepared to repose confidence in their appointed leaders, and give these leaders authority and power to negotiate on their behalf with a greater sense of continuity, knowledge and personal responsibility than can be secured by a system of annual election of officebearers; and by both operators and Union facing their difficulties themselves in the light of the facts relative to the industry, and with a common desire to share equitably in the fruits thereof.

2. Earnings, Wage Rates, Working Conditions, Etc.

We find that considerable confusion has arisen from the want of clear and easily worked procedure for the settlement of differences that occur in the ordinary course of the conduct of the industry. We make recommendations with regard to the procedure to be followed in arranging the general terms and conditions of employment, the settlement of day-to-day questions, and the revision of pit schedules in the light of changing circumstances.

We also make recommendations in regard to the treatment of general wage fluctuations. In this connection, we have examined the contention of the operators that the coal operations should be regarded merely as a part of the consolidated industry represented by the Corporation as a whole; and the counter contention of the men that the rise or fall of wages, as far as miners are concerned, should be determined by the financial results of coal operations taken by themselves.

We find ourselves in agreement with the men's contention, and indicate our views as to the methods by which this principle may be given effect. In this connection also, we review the financial results of the coal operations, taken by themselves during the last five years. Judging by that standard, we find the reduction of wages in 1922 was not justified at that date; a reduction would have been justified at some date in 1923; further, that the wage increase given in 1924 was unwarranted; but that the reduction of 10 per cent on the 1924 scale proposed by the operators in 1925 was amply justified. (The reduction provisionally applied as a result of the Government settlement of last August was, we understand, of an amount estimated to bring the rates payable to between 6 per cent and 8 per cent below the 1924 scale.)

We have also examined the financial position of the coal operations at the present time, and the view we form on the 1924 results is confirmed. A larger reduction would indeed be justified, but we limit our recommendation to a reduction of 10 per cent on the 1924 rates, having in mind the history of the past, and in the belief that with peace and co-operation

between the parties on a stable basis, the results of the coal operations may prove to be better for future months than present figures would indicate.

We also recommend that, for the future, fluctuations of wages should be in accordance with the ability of the industry to pay, as determined by the proceeds of coal operations, and indicate the outline of a scheme with that in view.

3. Inequalities Between Different Classes of Mine Workers

We have examined the complaints we heard in regard to inequalities between different classes of mine workers, and make suggestions in regard to the re-introduction of what are known as "local contracts," and also in regard to the operation of "cutting, shooting and loading."

4. Working Conditions

We have also examined the complaints in regard to conditions affecting mine workers in the course of their employment, and have made recommendations on what we consider were the principal matters calling for attention under this head. We formed the opinion that the policy pursued by the operators in planning and developing their coal operations generally is sound and reflects much credit on their mining engineering department.

5. Social and Domestic Conditions

Accompanied by representatives of the men and the operators, we inspected a large number of houses and the general surroundings of the mining communities. We found that for the most part the houses in which the miners lived were the property of the operators. We feel that the double role of operator and landlord is an unfortunate one, and that as soon as it is practicable, the operators should dispose of their houses by sale on moderate terms, in so far as it is possible to find purchasers for them amongst the men.

We direct the attention of the Government to the need for immediate action on their part, in conjunction with the local authorities, to overhaul the roads, sanitary conditions and amenities generally of several of the mining communities, particularly in Cape Breton. We regard the existing conditions as being a reflection not upon the operators or the men, but upon the town and municipal authorities. In this connection also, we recommend the discontinuance of the operators' staff of police, and the assumption by the local authorities of responsibility for the protection of property.

We do not feel that the constituted authorities can effect speedily enough, if at all, all the improvements that we believe to be necessary in the environment of the mining communities, and we recommend the constitution of a special fund—raised by contributions from the owners of the minerals, namely, the Government, out of their royalties, and from the operators of the mines—for purposes connected with the social well-being, recreation and conditions of living of the workers in or about the coal mines, and with mining education and research.

We were impressed with the extent to which deductions are made in the office for a great variety of purposes from the miners' wages, and we recommend the discontinuance of the "Check-off" system, except in relation to items that are connected with the men's employment, or in relation to interests in respect of which the operators are making joint contributions with the men.

6. Cost of Production, Transportation, etc., General Financial Organization, and Cost of Management, Examination of Operators' Books

The operators afforded us, upon our request, the fullest access to their books, and we had them examined by Mr. Gordon W. Scott, who acted as Accounting Adviser to us on all matters falling under this section of our investigation. We are advised by Mr. Scott that he found the books and papers of the operators to be kept in excellent order, and that, with the facilities afforded him, he had every opportunity of making a thorough examination.

Amongst other things, we investigated from the books all the documents which the men's representatives referred to in the list which they submitted to us as matters relevant to our inquiry, and we also examined the books in the light of general charges that were made against the operators in the course of the evidence. We deal with all these matters in our report, in so far as we deem them to be either relevant or important. Some of the charges deal with matters which we find, on investigation, play such a trifling part in the general finances of the Corporation that nothing is to be gained by commenting upon them.

7. Cost of Production, Transportation, etc.

So far as costs of production are concerned, it seems to us that the balance as between items entering into the cost is fairly adjusted. No one item appears to be disproportionately large, although even bearing in mind the physical conditions of the properties, the total cost of production is somewhat high, and no effort should be spared to secure such economies as are reasonable.

With regard to the cost of transport, it seems to us that there is considerable room for economy in the charges made by the railways—whether they be the property of the Corporation or other Railway Companies. The transport charges by sea are, we find, just enough to cover the cost of operating the Company's ships, without setting aside adequate provision for depreciation. In this connection also, we had the books of the Halifax Shipyards examined, and we find that the prices charged for repairs of the operators' ships compare favourably with the prices charged for repairs to outside ships.

With regard to the cost of Distribution and Marketing, we feel that the general public do not fully appreciate the margin of cost that is consumed by services that intervene between pit head price and the ultimate price to the consumer, and we indicate some considerations that must be borne in mind in this connection. At the same time, we do feel that the price of household coal at Halifax and elsewhere within the Province is high.

8. Capitalisation, General Financial Organization and Cost of Management

We have set out figures which show the capitalisation of the Corporation, and we point out that no dividends have since incorporation been paid on either its second preference or common shares; so that so far as the wage fund is concerned it has not been adversely affected by this aspect of the financial arrangements of the operators.

While we recognize that a substantial alteration has taken place in trading conditions, and even in immediate outlook, as compared with the date of incorporation of the Corporation, we do not feel disposed to hazard an opinion upon such a speculative question as the extent to which the capital might be revised; the only real test to be applied to such a question is the terms and conditions upon which necessary new capital can be obtained.

We indicate the manner in which the operations of coal properties have been combined in general financial organization with the operations of other constituent companies, and we recommend that, *so far as an accounting between operators and miners in respect of wages is concerned,* capital and other funds, as well as the operations, of the coal properties, should be regarded as separate and distinct from the other properties of the operators.

Cost of Management—We ascertained that an overhaul has recently taken place of the Corporation's administrative and management expenses, and it does not seem to us that these expenses as they now stand are excessive on the whole, whatever readjustments may be possible within the personnel. We are strongly of the opinion that in the interest of proper and sympathetic management and administration of the coal properties, it is desirable that they should be under the control and authority of a resident executive officer whose technical training, mining experience and status should be such that he can be charged with and become responsible for the initiation and direction of the coal policy of the operators.

9. Possibility of Increasing the Demand for Coal, Including its Utilisation as Coke

We received in evidence from the Secretary to the Dominion Fuel Board, an explanation of the work of that Board, and ascertained that on tests taken, the Board were satisfied that satisfactory coke for domestic purposes can be produced from most of the seams operated in the Cape Breton coal fields; and that they were of opinion that coking plants should be established at certain points in the Provinces of Quebec and Ontario.

We recommend that the Provincial Government should enter into active co-operation with the Dominion Fuel Board, for the purpose of exploring the possibility of an immediate development along such lines.

10. The transcript of the evidence and the exhibits filed have been deposited with the Department of Public Works and Mines. No recommendation as to the printing of these is made, since we regard such a matter as beyond our jurisdiction. We desire, however, to draw attention to the considerable amount of interesting and important information contained in the exhibits.

11. We desire to record our indebtedness to Mr. T. J. Brown, for the invaluable guidance and help he has afforded to us as Secretary of the Commission throughout the course of our investigation; to Mr. Gordon W. Scott, for the exhaustiveness with which he examined the books of the operators, and for his great assistance in all matters appertaining to the financial aspect of the situation; and also to Mr. William Armour, of the Mines Department of Great Britain, for the untiring service he has rendered to us on all technical and practical matters both in the course of the Enquiry and in the preparation of our report.

All of which is respectfully submitted.

We have the honour to be, Sir,
Your obedient servant,

ANDREW R. DUNCAN,
HUME CRONYN,
H. P. MacPHERSON.

8th January, 1926.

I. CAUSES OF RECURRING DISPUTES AND FRICTION

1. Lack of Goodwill and Mutual Confidence

No one acquainted with industrial life need be surprised that in Nova Scotia, as elsewhere, there should have been grave difficulties surrounding the transition from the artificial conditions of the war, and the immediate post-war years, to the more normal conditions and channels of trade and commerce. These difficulties would have been hard to surmount in any event. Unfortunately, as the evidence we have heard from both the operators and the men clearly shows, there has been in these coal fields a complete lack of goodwill and mutual confidence in facing the problems confronting them. We do not conceive it would be a profitable task for us to explain and examine in detail the individual incidents of the respective disputes and cessations of work that have taken place in the last four years, although they are all present to our mind in the conclusions we reach. Strife feeds upon itself to such an extent that cause and effect are hard to distinguish. It will, we think, in any case be more useful in clearing the air for the future, to set out as we see them, the broad underlying reasons of the antagonism that has been created and fostered.

Reasons of Antagonism

2. Opposition to Union Development

The men engaged in mining in this Province have felt for a long time that their interests demanded a stronger consolidation than was afforded by the old organization that represented them. For thirty years or more they have seen a consolidation of interest on the operators' side, first of coal properties, then of coal, ore and steel, and latterly of even wider range. They found their own first effort—in 1909—to establish a link with the United Mine Workers of America thwarted, and their later effort impeded. Although they were formally recognized as a district of the U.M.W.A. in 1917,* they were conscious of an under-current still persisting against them. There was for many years in the management of certain of the collieries a system of reports to the higher officers of the Company which the men interpreted as spying upon the affairs of their Union and calculated to intimidate men from taking an active part in the Union. The system may be harshly named when it is called a "spy system," but we regard the evidence as showing beyond doubt that it was at least an imprudent and even improper intervention on the part of the Company between the Union and the men. Although under the present consolidated management, and particularly under the administration of the last two years, that system has been gradually eliminated, the men have felt there was still a design to break their Union. They have reasoned that the non-unionism in the Halifax Shipyards and in the Steel Plant at Sydney was a signal of danger to themselves. We feel that there has been definite ground for their apprehension, although the representatives of the operators have laid stress on their opposition not so much to trade unionism as to what they described as undesirable elements in it.

3. Political Complications

So far as the present operators are concerned, it is obvious on the evidence that the embittered spirit between them and the Union was in part a legacy they took over from their immediate predecessors. In their experience with the Union, too, they found for a time that trade union activity and industrial negotiation were being confused—and even on occasions overridden—by the political and social theories and aims of avowed Communists working within the Union. They found also, as perusal of the copies of the *Maritime Labour Herald* produced in evidence reveals, press propaganda was being actively conducted in certain mining communities with the object of making well ordered and amicable relationships within the existing order of industry impossible; and further, that this organ was being supported from the funds of local branches of the Union. In this connection, it is not necessary to consider whether the numbers adhering to the Communist Party were great or whether they exercised much influence in securing new adherents. Quite clearly, in so far as they held key positions in the Union, their influence for making amicable relations between operators and workmen difficult, if not impossible, was out of all proportion to their numbers. We accept the evidence of the operators as to the discouragement they experienced in this respect, and as to the fundamental difficulties it created in the way of goodwill and understanding between themselves and the men.

*The Amalgamated Miners of Nova Scotia, an amalgamation of the United Mine Workers of America, district 26, and the Provincial Workmen's Association (Labour Gazette, July, 1917, p. 506), effected on the recommendation of the Royal Commission (Labour Gazette, May, 1917, p. 312) was recognized by the coal mine operators. This organization became, in 1919, District 26, United Mine Workers of America and was recognized by the operators in an agreement, February 22, 1919 (Labour Gazette, March, 1919, p. 307).—Ed. Labour Gazette.

It is not possible, either, to overlook the effect which was created in the minds of the operators by the Union's attitude on the hundred per cent strike involving the withdrawal of maintenance men. The policy of the hundred per cent strike, however, was admitted in evidence by representative witnesses of the men to be a grave error, and it is not necessary for us to do more than say it is inconceivable that reasonable persons could look upon such action with favour or tolerance.

4. Factions within the Union

Internal troubles within the Union have been a constant aggravation of the lack of understanding and sympathy between the operators and the men. Sensitive to their own weakness as a consequence of their factions, the men have nursed fears and resented acts on the part of the operators which would have troubled them little had their Union been united and strong, or had they felt that the operators were sufficiently well disposed to their desire for organization as to sympathise with them in their difficulties and not take advantage of them. We mention merely, as an example, the complaint that the operators placed shotfirers and examiners on the staff, as a means of inducing them to withdraw from the Union. Our own view is that the operators' action in regarding shotfirers and examiners as officials was legitimate, and that it was in accordance with the desire of the shotfirers and examiners themselves that it was done.

Some of the internal factions arose from causes which troubled even older organizations of workers in other parts of the world, and they were the more difficult to overcome here, because of the fact that the Union had not had time to settle down into a well-ordered organization.

5. Difficulties in Adjusting Smaller Grievances

Apart from, and in addition to, the men's anxieties in regard to the relationships of the operators and their Union, there has been widespread dissatisfaction and irritation among the men in respect of the direct and immediate settlement of questions arising in the course of day to day work in the pit. A very large proportion of the complaints we heard from witnesses on the men's side related to individual and local grievances. These grievances though small, when the coal field is viewed as a whole, are nevertheless acute in the minds of the individuals concerned. It seemed to us clear that, had there been full co-operation between the operators and the Union, some of these complaints would not have been supported by the Union itself. In many other cases the workmen had not taken advantage of the agreed machinery that exists for the consideration of claims and complaints, and in instances even when they had taken the initial steps to have their complaint considered, it had somehow "fallen by the way" and had not reached finality. The numerous changes in the officership of the Union, Union preoccupation with more general issues, and the omnibus settlements that followed the recurring stoppages of work are no doubt in a measure an explanation of the disposition on the part of men to nurse their grievances rather than trouble their Union with the task of following them up, and an explanation also of why the Union did not pursue to a conclusion many of the complaints that were passed on to them. But it is by no means the whole explanation.

The evidence disclosed a prevailing belief that the machinery for settling differences has been rendered valueless by reason of the restrictions which the operators had placed upon the authority of mine managers (and their sub-officials), or even upon the authority of the Superintendent of the Mines (and his assistants) to settle claims and complaints on their merits. We recognize the desirability and the need of uniform administration within a "grouped" undertaking. Even allowing that—whatever advantages it has—it is a weakness of grouping that it is apt to be inelastic on the human side, we formed the view that there had been over-restriction of the authority of the practical managers. We were also impressed with the tendency for these officers themselves to shirk the responsibility either of conceding or refusing demands upon their merits when it was open to them to pass on the responsibility to officials above them. Machinery for the settlement of differences should never be regarded as, or operated as, a substitute for the adjustment of minor claims on the spot, but as a supplement to it, and a necessary and proper safeguard to the interests of the men as a whole, as well as to the interests of the operators. Nothing is more calculated to cause irritation and discontent among men than to feel that questions which are purely local and individual—having no possible reaction in other directions—cannot be adjusted between them and their Manager, not because there is genuine disagreement on the part of the Manager as to the merits of the claim, or of its reactions, but because either he has not the authority to settle or is too weak to assume the responsibility of settlement. The evidence showed that witnesses did not expect their claims to be automatic-

ally conceded by the Manager or Superintendent, but they did expect them to be seriously considered and decided upon the merits.

We are satisfied that, from causes of this kind, there has been an accumulation of serious and extensive discontent and illwill.

6. Difficulties in the Settlement of Larger Questions

The antagonism engendered by the major issues of annual contracts and general wage fluctuations were in a sense of a part with these already discribed, viz.: the men were in a mood to construe the operator's demands as an open challenge to the strength and unity of their Union.

But in another sense the reaction was of a different kind. Here, as in every industrial community, there was a higher conception of standards of living and the rights of men in wage bargaining than there had been prewar. Accommodation was in the nature of things not easy to find. For a number of years wages had advanced in approximate proportion to the increased cost of living. The men were not prepared to yield up these increases merely because cost of living having fallen considerably by the end of 1921, it might be a wise business policy to reduce wages and prices for the benefit of harassed consumers. By retaining their increased wages when cost of living fell the men hoped to enjoy a better standard of life. Whether profitable business would continue to be available at those wage rates, what constituted *profitable* business, and whether a change in the situation could be met in any other way than by a reduction of wages were all issues on which they wanted closer argument and fuller information than it was the older practice to give. These problems were of the more serious import in the minds of the men because of the prosperity that had prevailed for some years in the industry, and because of the prospects of its continuance as depicted in connection with the merger of the operators' interests which had taken place so shortly before. A proposition for as high a wage cut as, say 35 per cent, would in any circumstances have been a matter of concern to the men, and in the circumstances as they viewed them, the burden of proof of necessity became the greater. The operators explained to us the facts and business considerations, as well as the market and other forecasts on which they figured, in formulating their demand. On a consideration of the statement they submitted to the Union, we cannot take the view that they were either indifferent or arbitrary in presenting their proposal; but even remembering they were regarding their operations as a whole and not coal operations separately, we believe the wage cut they propose was unreasonably high, and their action in enforcing it too precipitate. The fact that the proposed reduction was related so closely in amount to the fall that had taken place in cost of living was construed by the men as an indication that this circumstance and not economic necessity had dictated the operator's policy. In the light of the relation of interests within the Corporation and in the light also of the necessarily speculative nature of many of the considerations on which the operators were acting, we do not think there need be any surprise that the Union could not accept responsibility for negotiating upon such a reduction as was proposed. Indeed, as events proved, in the course of a few months circumstances developed—no doubt unforeseen at the beginning of the year—which permitted the operators to modify their wage-cut even further than the Gillen and Scott Boards had modified it. The result was that the men concluded the original stand taken by the operators had been unnecessary and insincere, and as some witnesses put it—though, we think, unwarrantably—dishonest. From the evidence of some of the most restrained and responsible witnesses that appeared before us, we have no doubt of the disastrous effect that was left on the minds of the men by the events of 1922. Feeling became so embittered as to destroy confidence in the reliability of figures supplied by the operators in subsequent dealings; and in any case, in the absence of knowledge of the internal relationship of the constituent companies, the men felt it was impossible for them to arrive at a fair estimation of the issues that divided the operators and themselves. Throughout these years the belief has persisted in the men's mind—an honest and sincere belief—that if the coal operations were regarded by themselves they would prove to be profitable; that is to say, if they were credited with fair transfer prices for the coal supplied to other constituents of the Corporation, if they were charged fair prices for the services rendered to them by other constituents, and if their funds were not burdened with responsibility for other interests than the economic development and operation of the pits. That they have felt they were being called upon, without their consent, and without reliable knowledge, to make sacrifices in order to maintain other constituent parts of the Corporation has been a real and substantial barrier to peace and concord.

7. Abuse of Conciliation Machinery

To understand the attitude of the operators in regard to general wage negotiations, one must remember that they placed great importance upon the view that their interests must be regarded as a whole, and that coal operations were to be treated as only part of a consolidated industry. They had further formed the belief that the Union was not prepared, whatever the economic circumstances might be, for an amicable negotiation of a reduction of wages; and that the officers of the Union did not regard themselves as having the authority to assume responsibility for testing facts for themselves and making recommendations to their members. From the evidence of the men's witnesses we concluded that there was at a certain period possibly ground for that belief in the minds of the operators.

These circumstances in part explain the hopelessness, which seems to have characterized both sides throughout the last few years, that they could ever reach common ground. They seem never to have got into such a serious discussion as to make it necessary for either side to understand the other's point of view. There cannot be goodwill and sympathetic understanding between the parties if they rest content to talk at each other through public prints instead of to each other over the table.

It seems to us on the evidence we have heard that it is not an accident that the history of this coal field for so many years back has been a record of Conciliation Boards and Commissions. It is most unfortunate that such outside help was so accessible to the industry, for what happened constituted, in our view, an abuse of conciliation machinery. Reliance upon outside persons and influence was developed to such an extent that both sides ranged themselves as two separate forces, and abandoned any attempt to see what was reasonable in the contention of the other. Worse still, a policy of this kind within the industry was bound to lead to a game of tactics, and we have evidence from witnesses on both sides as to the practice of tactics, which could only result in a graver misunderstanding of each other. It is not necessary for us to enumerate all the directions in which this misunderstanding developed and strengthened. We believe, however, that had there been genuine discussion, with responsibility, and with knowledge of the facts, between the parties themselves, even the major issues of wage fluctuations might have been settled without the need to resort to stoppages of work.

8. Irregular Employment

The feeling of unjustified wage sacrifice has unquestionably been accentuated in the minds of the men by reason of the hardships that arise from the irregular employment of the last two years. In addition there has been an impression that pits have been laid idle for the deliberate purpose of punishing certain districts. We do not find in the evidence the slightest justification for any such view. Economically it would have been better, in the circumstances, to concentrate on fewer pits, giving more regular employment there, and to close down certain other pits at least temporarily, even although that course would have been harder on the workers living at and dependent upon these pits. It must be added that in considerable measure the economic strain upon the coal operators, necessitating so much under-employment, has been a direct result of the business uncertainty created by so many stoppages and of the losses incurred by the stoppages.

9. Basis of Peace for the Future

Under the appropriate sections of this report, we express our views on many of the subjects that are raised in the foregoing paragraphs, but we think it well to add here a general indication of what we believe to be an indispensable background to the creation of a better spirit and understanding for the future.

The operators should make a frank and open acceptance of the U.M.W.A. as the medium of collective bargaining between themselves and the men.

While it is not to be expected that the men could allow the operators to dictate terms as to the basis upon which their Union shall be constituted or function, it is obvious that in so far as political aims are allowed to obtrude themselves into trade union affairs, the extent to which there can be friendly negotiation between the Union and the operators is lessened. In so far, also, as the men impair their own unity and strength by internal factions or by subdivisions among themselves, they are prejudicing the chances of successful collective bargaining.

The operators are, on the other hand, entitled to expect that the Union representatives with whom they negotiate shall have authority and responsibility to speak and act for their members—subject, of course, to the right of the members on all important matters to approve or disapprove by constitutional means any proposals or recommendations submitted to them by their representatives as a result of negotiations. We venture to suggest to the men that the system of annual

election of officers does not ensure the continuity that is desirable if their representatives are to develop the necessary sense of authority or the knowledge derived from a close study of facts and conditions. Such continuity seems to us to be essential in their own interests.

The coal properties of Nova Scotia are a valuable asset; but they cannot be developed to the best advantage either for those immediately concerned in them or for the public, unless both the operators and the men set themselves to promote peaceful and friendly relations by a due recognition of each other's rights. That is a task which neither outside persons nor influences can perform for them.

II. WAGE RATES, EARNINGS, ETC.

10. Schedules of Rates for each Colliery

The operators have twenty-eight collieries in operation at the present time, located in Cape Breton, Cumberland County and Pictou County. The wage rates—both datal and contract—payable in the various pits are provided for in a schedule of rates for each colliery. These schedules were originally negotiated in respect of each colliery separately, particularly so far as contract rates were concerned, in the light of the conditions prevailing in the colliery. Within more recent years there has been a tendency to bring the rates within the same district, or within the same Company, to more of a level for the same classes of workers, irrespective of the pit in which they work.

11. Periodic Adjustments and Omnibus Settlements

Under the system of negotiation that has prevailed for some time, it has been the practice for the operators and the Union to meet periodically—roughly, once a year—for the purpose of trying to

(*a*) Arrange a contract stipulating the general conditions of service for the ensuing period;

(*b*) Adjust a general wage alteration or fluctuation; and

(*c*) Revise the schedules of rates.

During the last four years it has not been possible on any one occasion to effect all of these purposes without a stoppage of work, and in every case after the stoppage there has been an omnibus settlement which could not pretend to deal so far as the revision of schedule rates was concerned, with anything but the most general matters. As a result, several questions, as the evidence shows, arising on the schedules of particular pits, were not specifically dealt with at all. Matters raised before us in this connection—e.g. questions relating to schedules at Springhill and Pictou County—were so technical that if it had been within our powers to determine them—which it was not—we could not have done so without having much more detailed discussion than we had. This of itself, in our view, shows the undesirability of even the parties concerned trying to do justice to such questions when their minds are taken up with other matters of a more general kind. But apart from this particular class of case, it seems to us that on general principles it would make for a better understanding and a fairer appreciation and valuation of the questions that arise between the Union and the operators, if there were a clearer cut arrangement between them on the question of procedure for the settlement of all differences.

12. Four Categories of Differences. And Machinery for Dealing with them

The subject matters that may give rise to differences can be divided broadly into four categories:

(a) Claims that are purely local in character, or even individual in character.

We mention merely, as an example, such things as claims for a variation of a particular contract rate in respect of deficiency of working place or some other abnormality, which takes the particular task out of the category of case which the schedule rate was intended to cover.

(b) Claims of a more general character, or claims which even if they appear to be local and individual might have reactions of a much wider nature.

We mention merely, as an example, such a thing as the general revision, up or down, of the rates in a schedule for any colliery, on account of an alteration of conditions arising from developments that have taken place in the working of the pit.

(c) Questions relating to the general terms and conditions of service.

(d) Claims for a general fluctuation of wages up or down, dependent upon the economic circumstances of the time.

(*i*) *Questions falling under (a) and (c)*—The form of annual contract which it has been customary to adjust in the past has, as we read it, set out procedure under which claims arising principally in Category (a) may be dealt with; and it also sets out the general terms and conditions of service referred to under Category (c).

Apart from the references which we make elsewhere to some of the matters covered by this form of contract, we have nothing more to say on the details of it. We think, however, it would be well for the parties to divide the agreement into two parts, or even into two agreements, the one dealing exclusively with procedure machinery for the settlement of differences, and this part of the agreement they should extend to cover procedure machinery for dealing with claims falling under (b). The other part of the agreement—or the other agreement, as we would prefer it—would deal exclusively with the general terms and conditions of service, and in effect would be a *code of working rules.* These agreements would not require to come up for discussion annually. They would be much more permanent in character than the present yearly contract, but stipulation could be made in them for reconsideration of particular provisions from time to time, or for a general revision, after a reasonable lapse of time and in the light of experience and changing circumstances.

We feel very strongly that it is a grave fault of the present arrangements that so many varied matters come up for consideration at the one time, and that there is not greater elasticity in dealing with the questions that arise in the pit, promptly and on their merits.

(ii) *Claims falling under (b)* are matters which—because of the possible reactions on other pits—could, and possibly should be dealt with, not by the management and pit committee, but direct by the Union (with the help of representatives from the pit) and the responsible officers of the operators, including the manager of the pit. There is nothing to be gained by having them discussed by persons who cannot be expected to have the powers to settle them. In any event, there should, as we have just said, be agreed machinery for dealing with them in an expeditious manner; and as we have indicated, that machinery could be set out in the procedure agreement referred to above.

(iii) *Claims arising under (d)* are of the most general and vital importance in the industry, and should be dealt with clear of all complication with other questions. We are impressed—and we feel sure both the operators and the Union must be impressed—with the great loss that has been caused in business by reason of the recurring stoppages of work which have resulted from repeated failure in recent years to arrive at an amicable settlement of these general wage adjustments. A considerable portion of the St. Lawrence trade which the operators had in pre-war times has not been regained since the War: for example, Dominion Coal Company alone supplied the St. Lawrence market with 500,000 tons less in 1924 than pre-war. In this connection, we attach a Schedule marked A showing a comparison of pre-war channels of trade and present channels. We also attach a Schedule marked B showing the total output for Nova Scotia by Counties from 1913 to 1925.

From inquiries which we made in Montreal we were convinced that, even on price, some part of the old trade could have been regained, and possibly new trade secured, but for the fact that consumers felt themselves obliged not to depend entirely—or even to depend at all—upon Nova Scotia for their supplies. They were afraid of the risk that a stoppage of work might occur at any time during the currency of their contract, and deprive them of their supplies, leaving them to take the chance of making other and less favourable arrangements on short notice. This loss is in addition, of course, to the direct and immediate loss of business which resulted from the actual stoppages.

We are convinced of the clamant need for a prolonged period of peace in this coalfield, if the full possibilities of trading are to be reaped. We cannot see how the parties can restore to the minds of consumers the necessary assurance of security of supply, unless they can make a wage arrangement that will operate—without fear of a breakdown—over a longer period of time than in the past.

13. Relationship of Coal Operations to Other Constituent Parts of Corporation

There are certain directions in which—having heard the arguments of both parties at much length—we feel we can offer guidance and advice in connection with their deliberations on general wage adjustments.

(a) The operators claim that the wage problem of the miners must be looked at in the light of a consolidated undertaking. The men, on the other hand, claim that their concern is primarily with coal operations as a separate unit.

We believe that the Steel works operations have been of very considerable help in the past to the proper development of the coal properties, by affording them a market for slack coal. We believe, further, that there is still considerable advantage to the coal properties—particularly in view of the character of the coal—in having a market for the disposal of their slack, in the immediate neighbourhood.

SCHEDULE A.—SHIPMENTS OF COAL FROM NOVA SCOTIA AND DESTINATIONS, 1913-1925.

——	1913	1914	1915	1916	1917	1918	1919	1920	1921	1922	1923	1924	1925

1923	4,381,229	784,648	154,074	856,634	3,104	6,179,690
1924	3,656,780	602,590	94,034	619,780	.....	4,973,184
1925	2,175,662	489,779	120,233	501,398	1,249	3,288,321

Even if industrial developments have been such, and the coking possibilities of the future may be such, that there is a prospect of a wider field for the disposal of slack coal than there was in the past, it will obviously take a considerable time before these markets can be developed in such a way as to enable all or even the greater portion of the slack coal to be placed.

At the same time, the coal properties have in the past, through a low price of coal and in other ways, made an important contribution to the Steel Plant, and we think that the men's claim is sound that, so far as the regulation of their wages is concerned, there should be a fair transfer price placed on the coal passing to the Steel Plant for the future. There is a contract still subsisting which was entered into, in 1903, between a willing seller and a willing purchaser, which is a guide as to a fair transfer value. Revision of price—although it has taken place by arrangement from time to time—has not been determined in the manner provided. The operators of coal and steel being one, there was probably little purpose, from their point of view, in applying the terms of the contract to this extent, but from the miners' point of view there is good reason why it should be done. We recommend, therefore, that—whatever the internal transactions of the operators may be, and at whatever price the coal is in fact charged to the Steel Plant—*for the purpose of an accounting between the operators and the miners in respect of wages,* the price of coal supplied to the Steel Works should be written into the colliery accounts *at a figure properly assessed in the terms of the contract.* The only qualification that we might suggest would be that if that price be greater than the cost of production of the coal, the latter figure, or something near it, should be taken. We feel that the contribution which the coal operations have already made to the Steel Works, and the further modified contribution which this last proposal implies, are as much as the miners can reasonably be expected to make to the Steel Plant. At any rate, if they make any further contribution, it should be of their own volition, and in the light of the circumstances of the time and a knowledge of the facts.

(b) We also recommend that in other directions the terms of the contract should be observed.

Provision is made in it for payment of interest on accounts not paid by the Steel Company to the Coal Company at due date.

Provision is also made as to the extent to which and the purposes for which coal is to be supplied in accordance with its terms.

So far as an accounting between the operators and the miners in respect of wages is concerned, that interest should be credited, and all coal transferred to any of the operators' undertakings beyond that specified in the contract should be treated as if it were sold at a fair market price.

(c) The capital and other funds of the Coal properties have been treated as one with the funds of other constituent parts of the Corporation; and for the future we think that there also the same principle should be followed as in the two preceding cases, and the funds of the coal properties be regarded, so far as an accounting between the operators and the miners in respect of wages is concerned, as separate and distinct.

Our suggestions arise from the fact that we accept it as a reasonable proposition that the wages of the men employed in the collieries should for the future be governed by the operations of the coal properties alone.

14.—Need for Knowledge of Facts in the Industry

It appears to us that the men's claim for knowledge on pertinent facts in the industry when considering wage fluctuations, is reasonable and justified. We believe that they are sincere and honest in their desire to co-operate on a footing that will ensure due justice, and that they are prepared to deal in a business-like way if they are given an insight into the real facts of the industry. From the manner in which their case as a whole was presented to us, and from our own observation of the more responsible witnesses who gave evidence, we came to the conclusion that they were alive to the necessity of giving full weight to business considerations. This view we formed, in spite of the statement by some witnesses that they would expect an increase of wage rates even if it meant much less employment and less total earnings.

If justice is to be done, and economic and steady operation of the pits is to be secured, clearly both sides must be guided by the ability of the industry to pay.

15.—Wages in Relation to Ability of Coal Properties to Pay

We have had the figures taken out in respect to the Dominion Coal Company's operations alone for the year 1913 and for the years from 1921 onwards, on the principles enunciated in paragraph 13, and on the assumption that the Steel Works and other constituent companies would not have consumed less coal than they did. We have studied them carefully from the point of view of forming a conclusion upon the variations in wages that have taken place since 1921, and upon the present position. We have also had the figures examined for the Nova Scotia Steel and Coal Company's coal properties, and they do not in any way negative our conclusions.

We find the position to be:

(a)—The coal operations of the Dominion Coal Company for the year ending March, 1921, were profitable, showing a gross profit of 13.2% upon the capital invested, and for the nine months, April to December, 1921, a gross profit of 10.8%. (By gross profit, for this purpose, we mean earnings before setting aside any reserve for depreciation, or Federal Tax, and before paying bond interest or share dividend of any kind.) The comparable figure for 1913 was 9.7%. On these figures we think the operators were not justified in insisting on a reduction of wages in 1922, even in spite of the change which they estimated had come over the market and future prospects by the end of 1921.

(b)—The comparable figures for 1922 and 1923 were 8.1% and 4.4% respectively. We think a reduction of wages would have been justified at some date in 1923, and that the increase granted in 1924 was not justified.

(c)—The comparable figure for 1924 was 2.3%, and we think the reduction of 10% on the 1924 scale proposed by the operators in 1925 was amply justified. (The reduction provisionally applied as a result of the Government settlement of last August, was, we understand, of an amount estimated to bring the rate payable to a point between 6% and 8% below the 1924 scale.)

(d)—A comparable figure for 1925 cannot be obtained, in view of the disturbed conditions during that year and the heavy losses that were sustained by the five months stoppage of work. At the same time, we have examined the monthly profit and loss accounts since the resumption of work, and they confirm the view we form on the 1924 results, namely, that the reduction of 10 per cent which the operators proposed last year was amply justified. A larger reduction would indeed be justified, but we limit our recommendation to a reduction of 10 per cent on the 1924 rates, having in mind the history of the past, and in the belief that, with peace and co-operation between the parties on a stable basis, the results of the coal operations may prove to be better for future months than present figures would indicate.

The greatest need at the moment is regularity of employment, for upon that—whatever the wage rates may be—depend the earnings of the men. We attach a schedule, marked C. taken from "Coal Statistics for Canada, 1924," page 44, comparing employment and earnings figures in the mines of Nova Scotia for 1923 and 1924. Whereas the wage rate was higher in 1924 than in 1923, the average yearly earnings per man were approximately $150 less in 1924 than in 1923.

Under the scheme which we suggest in the succeeding paragraphs, if the coal operations should prove to be distinctly more remunerative than present figures and the proposed reduction would indicate, then the men will automaticaly share in the prosperity.

SCHEDULE C

EMPLOYMENT AND EARNINGS IN THE COAL MINES OF NOVA SCOTIA, 1923 AND 1924,

	1923	1924
Average number of wage-earners—		
Surface	2,823	2,314
Underground	10,562	10,186
Total	13,385	12,500
Days' work done—		
Surface	799,775	572,537
Underground	2,721,301	1,954,895
Total	3,521,076	2,527,432
Average number of days worked per man per year—		
Surface	283	247
Underground	258	192
Total	263	202
Total wages paid	$15,535,830	$12,449,708
Average wage earned per man per day	$4.35	$4.93

16.—Future Wage Regulation

We have already emphasized our belief that certainty of a continuance of peaceful relations is, after so many recent eruptions, absolutely essential to rehabilitate remunerative trading, and to permit of the operations of the pits being developed upon the basis of regular and steady employment. A short term settlement is therefore to be deprecated most strongly. There are two alternatives, it seems to us, before the parties: either,

(i)—To fix a general wage variation now in the light of existing facts—and our deductions from them—for a term of, say, two years at least; or

(ii)—To fix that variation now but to let it apply only until such time as a scheme has been worked out, and is in operation, for the automatic regulation of wage fluctuations at stated intervals—say, every six months—over a longer period of years—say, at least three years—in the light of the ability of the coal operations to pay. The ability to pay would be tested by agreed data, which would be incorporated in the scheme. Any scheme of this kind to be satisfactory must be worked out by the parties themselves, with the help and advice of competent accountants appointed by each party, and should operate under the supervision of these accountants. It might prove helpful to the parties if any discussions they had in regard to the framing of such a scheme were presided over by an independent chairman who would in no sense be an arbitrator, nor have a determining voice in their negotiations. We do not go so far as to make a suggestion to this effect, but merely mention it for the consideration of the parties.

17.—Scheme for Automatic Regulation of Wage Fluctuations

We strongly recommend that the second course suggested in paragraph 16 be adopted. The scheme might provide for the variation of wages as a reflection of variations in selling prices, or as a reflection of variations in some other agreed factor; but we prefer that the test should be *the proceeds of the industry.*

Machinery would be agreed upon for the relevant figures to be continuously returned, audited and adjusted under the supervision of accountants for both parties, and any variation of wage found to be due would be applied automatically in the wages for the succeeding period without discussion or friction between the parties. Since the ascertainment and verification of the figures would take time, an interval should be left between the first period of ascertainment and the period governed. The first period of ascertainment could be made the period from 1st February to July 31st, 1926, to take effect from 1st November, 1926; and the next period of ascertainment would be 1st August, 1926, to January 31st, 1927, to take effect from 1st April, 1927, and so on.

The operation of such a scheme would be subject to a provision that wages were not in any event to be reduced below an agreed level or standard. The length of period during which the scheme should operate—although

we have suggested three years as a minimum —would in a measure depend upon the standard fixed, and the standard itself would depend upon the position of the industry at the time of fixing it, the cost of living, and the extent to which outside competition is regulated by operation of the Tariff. If the returns for any period of ascertainment showed that the proceeds were not enough to remunerate capital within that period, as well as sustain the standard wage, then rather than reduce wages below the standard, the deficit due to capital would be carried forward as a charge to be met out of the balance left over in succeeding periods.

III.—INEQUALITIES BETWEEN CLASSES OF MINE WORKERS

18.—Inequalities of Wages

Having considered the evidence we heard on this subject, and having made a comparison with the rates prevailing in other districts, we have come to the conclusion that the distinctions which exist between the wages of men on the surface and those underground or as between datal and contract men underground have always persisted in these mines and are characteristic of the industry not only in Canada, but elsewhere.

It appeared to us that in exceptional cases an individual workman, by reason of his having met abnormally advantageous conditions, may have been enabled, for a time, to earn a wage much above the average, and a comparison of such earnings with those of the ordinary labour wage had led to a great deal of misapprehension on matters of this kind. There are only two subjects on which we think it necessary to offer any special observations to the parties, viz.: local contracts; and cutting, shooting and loading.

19.—Local Contracts

We believe that the system known as "local contracts" recently abolished by the operators, should be re-established at economic rates for all classes of men who are direct factors in the transportation of coal in the mine and for men employed as brushers.

And further, we recommend that the arrangements in connection with local contracts be elastic enough to permit of readjustments under varying conditions, irrespective of general wage adjustments.

20.—Cutting, Shooting and Loading

We heard considerable complaint as to inequality of earnings between cutters on the one hand and shooters and loaders on the other. In mines where radial or punching machines are in use, and where there is sufficient power and pit room, and in mines where sufficient power and pit room can be supplied, we would advise the operators to change the two operations of cutting, shooting and loading with a tally for cutting and a tally for shooting and loading, to one tally system embracing the three operations. Wherever practicable, cutting should be done on a different shift from shooting and loading.

IV. CONDITIONS AFFECTING MINE WORKERS IN THE COURSE OF THEIR EMPLOYMENT.

21.—In the course of the evidence of the men's witnesses, we heard very many complaints in respect of the working conditions at particular pits.

Variety of Working Conditions Inevitable

Nearly one-half of the collieries worked by the operators, producing over one-half of the total output, are submarine—some of them extending for miles under the sea. The situation in this respect increases considerably the difficulties of extracting coal.

Physical and working conditions must in any event vary considerably in the different collieries, and the general layout of more modern pits—as for example, Colliery 1B, which is one of the best equipped modern pits—will afford much more comfortable and advantageous working conditions than the older pits that have been in operation for very many years. There is the further consideration that some of the pits, which when under individual ownership were laid out with a certain life-prospect, have, now that they are part of a "grouped" undertaking, been given a longer life-prospect. The transformation from old conditions and outlook to the new conditions and outlook is a matter of delicacy and difficulty.

A large number of the complaints we heard are, in our view, matters which can be more properly adjusted between the management of the collieries and the men, and the suggestions we have made in regard to the machinery for considering differences that arise will, we hope, make it possible for these matters to be dealt with more expeditiously.

There are several points, however, upon which we think it desirable to offer some remarks.

(i)—Fatal Accidents

Evidence was given to the effect that the fatal accident rate in Canadian mining was serious. The operators pointed out that while their own accident rate was serious, it was not nearly so heavy as in other parts of

the Continent; for example, whereas for the four years—1920 to 1923 inclusive—the fatal accidents in the operators' mines averaged annually 2.11 per thousand men employed, the death rate in the coal mines of the United States during the same period was 3.8 per thousand, and in Great Britain, approximately 1 per thousand. They added that in Britain, coal mining is an old established industry, and by a more rigid adherence to mining regulations and a prompter punishment of infractions thereof, accidents are to a great extent avoided. Beyond the inference to be drawn from that statement, no evidence was forthcoming as to any specific measure that could be adopted to mitigate the loss of life associated with the industry.

Our attention was drawn, however, to the "Safety First" propaganda which the operators conducted by posting notices throughout the mines and in other ways. Some witnesses for the men reflected upon the "Safety First" propaganda and the personnel connected with it as being an unnecessary expense. We do not take that view; but on the contrary feel that it is a direction—and a very effective direction—in which the operators and the men can co-operate with very considerable advantage. However firmly the law is administered in regard to safety, and it should be rigidly administered, there can be no doubt that very many accidents arise from individual disregard and overlook of the ordinary canons of safety to oneself and others.

(ii)—Lengthy Walks from Pit Bottom to Place of Work

On the evidence we are satisfied that the operators have been giving close attention to minimizing the distances which the miners have to cover by foot to reach their working places. This is a subject matter that has been commented upon at previous Enquiries, and it is obvious that the time and energy spent in getting to their work may be so serious as to deplete the miners' energy and be an impediment to production.

Since 1917, riding rakes have been established in the collieries to the extent of nine miles of roadway, and the average number of miles walked per man has been decreased by twelve per cent. Completion of a greater length of riding rake has been delayed as a result of the 1925 stoppage of work.

We feel that the question of mechanical transport of men to their working places is one that calls for the continued attention of the operators, and that every effort should be made to overtake as speedily as possible any arrears that have accumulated. In certain mines the length of walk necessary is still much too great.

(iii)—Boxes.

Complaints were made of the scarcity at times in the supply of boxes, the bad state of repair of many of the boxes, the practice of men having to tip empty boxes to one side—in certain pits—to allow loaded ones to pass, and the extra effort expended and the time lost in pushing boxes from the face, due to a scarcity of horses and the impossibility of bringing horses into places where the roof of the working place is not of sufficient height.

The witnesses who brought these matters to our attention stressed them as impediments to production, and therefore, as impediments also to the earning capacity of men whose remuneration was based upon output.

The witnesses of the operators, on the other hand, impressed us with their appreciation of the desirability of attending to matters of this kind so far as they could. In order to see that production was not lost through impediments which could be remedied.

We recognize that in the day to day working of a mine, obstacles arise which are beyond the control of parties; but there are two comments which we feel it necessary to make in considering this group of complaints:

(a) That some of the witnesses did not give enough consideration to what is practicable;

and

(b) That in determining what is economically practicable, the witnesses of the operators were apt to look too much at the particular operation—we refer particularly to the tipping of boxes—without having regard to the very small proportion of the total cost that was affected by the proposition, and the other advantages that would arise from remedying the complaint.

(iv) Other Complaints.

Of the other complaints in regard to working conditions, we mention only:

Faulty condition of the roads and haulage tracks; lack of air pressure whereby cutting and boring machines are operated; the absence of facilities for the conveyance and storage of heavy tools, thereby imposing upon the miner the additional burden of carrying these tools, sometimes for long distances, and in this connection, the increasing steepness of the inclination of the coal seam in certain Springhill collieries.

The evidence we heard on these points does not seem to us to call for special comment, beyond the general observations we make below, except to say that we did feel that attention should be given to the conveyance and storage of heavy tools, and that in particular the circumstance complained of in this connection at Springhill would seem to warrant special attention.

22.—General Remarks

On the broad consideration of the working conditions in the collieries, the operators drew our attention to the fact that at present they are pumping on the average two tons more of water than in 1917 for each ton of coal extracted, and that taken all around their underground equipment is today better that at any previous period. They also satisfied us that they have in the past few years—at an expenditure of over $1,000,000—considerably improved the air courses and ventilation of the pits generally, so as to secure more healthy and comfortable working conditions, as well as to minimise the danger due to the release of large volumes of gas in the course of operations; and they drew our attention to the fact—substantiated by evidence—that despite an average increase in depth of 300 feet, and length of roadways of thirty per cent, the average output of coal per man in their mines during 1924, in an eight-hour day, was six per cent higher than the production in a ten-hour day during 1917. The witnesses for the men themselves testified to the improvements that had taken place in these directions.

We are advised that the haulage roads and airways throughout the collieries compare favorably with the best equipped collieries in other countries, and that although there is room for improvement and need for further expenditure, the policy being pursued by the operators in planning and developing their mining operations is sound, and reflects much credit upon those in responsible charge.

Beyond recommending that the most careful attention should be paid to manholes in haulage ways, and to protection of the roof, particularly in places where, on roadways, falls of considerable height have occurred and have been left uncovered; and that the problem of coal dust in certain mines should receive continued careful consideration; we do not feel it necessary for us to make further comment than we have already done on the general working conditions of the pits.

As we already said, a considerable portion of the evidence under this section related to matters which, as we see them, should be easily enough adjusted between the management and the men, so long as there is proper procedure for dealing with the questions.

V—SOCIAL AND DOMESTIC CONDITIONS

23.—Accompanied by representatives of the men and the operators, we visited and inspected a large number of houses, and gained information as to the accommodation afforded, their state of repair, and the rentals paid. These matters were also dealt with very fully in the course of the evidence.

24.—Condition of Operators' Houses

We do not overlook that the condition of a home depends to a very considerable extent upon its use by the occupants, and upon the thrift and the energy of those in control of the household. Our observations, in the course of the inspection we made, amply confirmed that axiom. We have formed the very definite view, however, that so far as houses rented from the operators are concerned, the accommodation and state of their repair generally fall short of reasonable requirements. The houses are built of wood, and as a rule, have their walls covered from roof to foundation with wooden shingles. This type of construction, it appears, is better able to withstand the heavy gales which sweep over Cape Breton and the coast line of Nova Scotia generally. Many of these houses are old—some of them having been erected by the General Mining Association more than fifty years ago. Others were built for the purpose of housing men engaged on the erection of portions of the operators' plant or in opening up new mines; the latter are little better than temporary shelters and are known and properly described as "shacks." Many families occupy houses that are much too small for their needs. The houses generally have no kitchen or cellar, and in certain districts, in default of waterworks, water is either delivered by the operators in carts or has to be carried from a distance. Where water is piped into the house, there is an almost total absence of bathrooms or waterclosets, due, we were informed, to the lack of sewers. There is much complaint of the leaky condition of the roofs, of ill-fitting doors and windows, of doors that are rotted or badly worn, and of walls on which paper and plaster are in shreds and patches.

With the exception of a limited number of dwellings—and these usually of the oldest type, built in rows—the houses stand on lots

that are amply large enough to permit of cultivation. We were struck with the general absence of any attempt on the part of the tenants to make any use of the land that is at their disposal.

The badly rutted streets, the straggling fences, and the outside privies add to the unattractiveness of the general picture.

The foregoing observations apply to the Cape Breton coalfields, and do not apply to Springhill or to Pictou County—where there was very little complaint about housing. The contrast, indeed, between these communities and the Cape Breton mining communities was most marked.

The situation as to housing is not one initiated by the present operators. It is in the nature of a burdensome legacy inherited from constituent companies.

25.—Rental From Housing

Altogether there are nearly 3,500 houses in the various coalfields belonging to the operators and rented to their employees. The rentals received by the operators are, in our view, distinctly moderate, and they were admitted to be so by practically every witness who spoke on this subject. They run from $2.50 per month for a two-room shack, to a maximum of $15.00 per month for a large and modern dwelling. The average rental for all houses owned by the operators is $5.78 per month.

BRITISH EMPIRE STEEL CORPORATION, LIMITED

SCHEDULE D.—STATEMENT SHOWING GROSS RECEIPTS FROM RENTAL OF DWELLINGS AND EXPENDITURE IN CONNECTION WITH SAME, EXCLUDING DOMINION IRON AND STEEL CO., LTD., FOR UNDERNOTED PERIODS

Year	Rents Collected	Repairs to Dwellings	Streets and Water	Cleaning Yards	Taxes	Insurance	Total	Profit and Loss
	$	$	$	$	$	$	$	$
1919.....	226,435 48	317,837 99	12,238 39	2,957 75	54,595 57	4,146 24	391,865 94	165,430 46
1920.....	239,625 37	474,260 17	18,188 36	3,134 70	63,744 75	5,382 67	564,710 65	325,085 28
1921.....	239,299 61	218,473 54	17,430 46	3,220 76	71,881 15	6,408 20	317,414 11	78,114 50
1922.....	244,493 93	263,606 15	30,909 88	3,527 25	81,228 67	7,338 24	386,610 19	142,116 26
1923.....	256,783 41	385,584 88	25,026 98	3,974 77	82,008 89	7,714 82	504,310 34	247,526 93
1924.....	259,241 47	146,195 77	14,764 79	3,442 07	81,848 83	5,504 83	251,756 29	7,485 18
Total....	1,465,879 27	1,805,958 50	118,648 86	20,257 30	435,307 86	36,495 00	2,416,667 52	950,788 25

Attached as Schedule D is a statement for the past six years of the rentals collected and the amounts expended by the operators for taxes, insurance, repairs and smaller items. This statement shows that for repairs alone the operators have disbursed during that time about $340,000 more than the rent received. If there be added to that deficit the payments for taxes, and insurance, the operators have lost on this part of their enterprise over $800,000. It will be observed that in this calculation the actual out-of-pocket disbursements alone are taken into account, and nothing has been entered for loss of interest on the amounts invested in these dwellings. In addition, the operators have expended large sums on water, streets, fences and yards, and have allowed a number of houses to be occupied by widows, rent free.

On a complete balancing, the loss sustained by the operators in six years might be reasonably calculated at 94 per cent of the book value of the houses.

26.—Sale of Houses

The operators have, through a subsidiary concern, in the last four years sold 160 houses to their employees, at from 40 per cent to 60 per cent of their actual appraised value. That not more houses have been disposed of appears to be due in part to objections taken to the form of agreement adopted by the operators, which protects them from any claim due to subsidence caused by their continuing or extending their mining operations beneath the properties sold.

In the course of the evidence, the operators expressed themselves as being prepared to qualify this provision to the extent of their being held responsible for damage proved to be sustained from this cause up to the price paid for the property damaged, and this seems to us reasonable.

27.—Miners Owning Their Own Houses

We are deeply impressed with the care and attention which was bestowed upon their property by the miners who owned the homes they occupied, and also by the improved appearance of the district generally, wherever there was a large number of homes owned by the miners themselves.

28.—Social and Domestic Conditions Generally

On the question of social and domestic conditions generally, we offer the following observations and suggestions:

(*a*) Double Position of Operator and Landlord

It seems to us unfortunate that operators should occupy the double position of employer and landlord. In the course both of the evidence we heard and of our perambulation of the districts, we came to the conclusion that the mere fact that the operators were the owners of the houses, and were presumed to possess great resources, was a very definite factor in causing many occupiers not to bestow upon their homes the care and work which—particularly in the light of the admittedly low rentals—persons would bestow upon the house they occupied, in the interests of their own comfort and enjoyment.

In these circumstances, and in view of the highly unprofitable character of the operators' venture in owning and renting houses, we are strongly of the opinion that the operators should reconsider the terms as to price, payment and interest, on which they are prepared to dispose of their holdings to their employees. In order to deter speculative purchasers, provision could be made in the terms of sale that would ensure occupation of the houses by persons engaged in the industry.

(b) Action by Authorities

We would direct the attention of the Provincial Government to the need for an immediate consideration on their part, in conjunction with the local authorities, of the roads, the sanitary conditions, and amenities generally of the mining communities, particularly in Cape Breton, and at Thorburn.

From the evidence we received as well as from our own observation on the spot, we are satisfied that the responsibilities that ought to devolve upon Municipal or Town authorities in these respects, as well as in respect of attendance of children at school, are not being discharged, and that the general conditions in which miners and their families have to live—quite apart from the internal state of their homes—are not such as they are entitled to expect. The ordinary relationships between operators and employees are, in our view, being seriously prejudiced by reason of the very reasonable discontent which the miners feel at this condition of affairs. We think also that the "policing" requirements of the districts should be reviewed. We deprecate the direct employment of policemen by the operators. The authority of the law should not, in our opinion, be allowed to reside in private hands.

We were struck with the absence of community spirit and community enterprise generally, and we are strongly of the opinion that the responsibilities in this connection, as well as the responsibility for the protection of property, do not rest, and should not rest, upon operators, but are a matter for the Municipal or Town authorities.

We recognize, of course, that with so much trouble as there has been, the funds or credit at the disposal of these authorities may be inadequate to meet the needs of the situation so promptly as they should be met; and it is for this reason—as well as for the reason that we believe the ultimate responsibility for the supervision of municipal and town administration rests with the Government— that we recommend that the Government should associate themselves with the Municipal and Town authorities in straightening out the situation.

(c) Social Well-being and Environment

We do not feel that such improvements as the constituted authorities can effect are enough to create speedily the environment which these mining communities need and we very strongly recommend the constitution of a fund which can be administered for purposes connected with the social well-being, recreation, and conditions of living of the workers in or about the coal mines, and with mining education and research.

This fund should be constituted by contributions from all the operators of coal mines, to the extent of 1 cent per ton of coal raised, and by contributions from the Province from the royalties which they receive in respect of the ownership of the mines, to the extent also of 1 cent per ton of coal raised. If these contributions were continued for a period of five years, a fund would be constituted which would go a long way to improve very materially the surroundings in which the miners live and to afford the miners and their families reasonable opportunities for social, physical and intellectual development.

The fund might be administered by a Board appointed by the Government, consisting of a Chairman and two representatives nominated direct by them, two nominated by them after consultation with the operators, and two nominated by them after consultation with the miners. Care would need to be exercised that the fund was not used in relief of charges that should fall upon local rates or the Provincial exchequer.

(d) Check-off System

We were impressed by the great extent to which the check-off system has been extended, and by the misunderstanding which has been created in the minds of certain witnesses as to its operation. This system has been used in the main for the following purposes: Rents of Company-owned houses; Supplies from Company-owned stores; Coal; Checkweighmen; Supplies, such as Powder and Tools; Doctor; Hospital; Benefit Societies; Church; U. M. W. A.; and even Town Taxes in some cases; the operators making the necessary deductions from the workers' pay and handing over the funds to the appropriate channels.

Since the stoppage of work in 1925, the operators' stores have been closed, and deductions on this account would automatically cease when arrears were paid off.

BRITISH EMPIRE STEEL CORPORATION, LIMITED

Schedule E.—Statement of Deductions from Mine Employees, Year 1924

——	Dominion Coal Company	Cumberland Railway and Coal Company	Acadia Coal Company	Nova Scotia Steel and Coal Company	Total
	$	$	$	$	$
Warehouse Supplies (for their work)	115,717 51	11,266 52	26,112 86	22,958 70	176,055 59

Doctors	154,024 84	18,122 76	11,112 55	38,840 00	222,100 15
Checkweighmen	46,486 97	4,024 32	2,024 42	7,494 55	60,030 26
U. M. W.	160,353 92	20,833 00	29,290 55	36,653 00	*247,130 47
Employees' Benefit Society	122,076 47	16,010 50	7,571 00	.....	145,657 97
Churches	60,966 34	5,832 25	3,010 50	6,074 55	75,883 64
Taxes	51,680 20	2,075 30	.....	.....	53,755 50
Hospitals	99,636 18	.....	3,870 50	14,620 00	118,126 68
Sundries	51,687 24	9,628 35	5,914 94	8,069 85	75,300 38
	2,349,866 51	145,362 22	161,726 30	329,220 40	2,986,175 33

* Note—Includes special levy as under:

Dominion Coal Co., Ltd	$ 65,402 97
Cumberland Rialway and Coal Co. Ltd	8,374 50
Acadia Coal Company, Ltd	12,037 45
N.S. Steel and Coal Co., Ltd	16,994 50
	$102,809 42

Attached is a copy of a statement (Schedule E) submitted in evidence, showing the deductions checked off in 1924. We find that the average total deducted in 1924 was between one-quarter and one-third of the average total earnings. In cases of men having irregular employment, the deductions in a given week were sometimes 50 per cent, or even up to 100 per cent of their earnings for the week.

We have come to the conclusion that the check-off system is one that should be discontinued practically in its entirety. The only exceptions we would suggest would be

(i)—Deductions in respect of matters having direct relation to the men's employment, (viz: powder, tools and checkweighmen), and that are necessary to be made before his earnings can be determined;

and

(ii)—Deductions in respect of such interests as Benefit Societies and Hospitals, since the operators are making joint contributions with the men.

In all other respects, we believe it is better for the independence and responsibility of the individual that he should receive his earnings in full, and that the discharge of his obligations should be a matter so separated from his employment as not to cause embitterment in his mind and confusion as to the nature of the obligation.

In order that time may be given to the parties to make the adjusted arrangements that will be necessary, we would suggest that the discontinuance of the check-off be delayed for six months.

VI.—COSTS OF PRODUCTION, TRANSPORTATION, DISTRIBUTION AND MARKETING

29.—Costs of Production

The factors in cost of production of coal are: Labour; stores and materials; power; general expenditures, including repairs and betterments, depletion and depreciation; and administration expenses.

We attach a schedu'e marked F. which shows the relative proportions of these items in the total cost of production over a period.

SCHEDULE F. DOMINION COAL COMPANY, LIMITED—ALL COLLIERIES.

(a) Labour Costs

(i) Physical Conditions

The importance of physical conditions in relation to labour costs must not be underrated. Depth from the surface, thickness and character of the seams, and inclination of the strata, are all factors which enter into the output efficiency of the mine and therefore into the labour cost. In these respects the Nova Scotia collieries differ considerably from the collieries with which they are in competition —an important circumstance to bear in mind. Even as between pit and pit within the coal areas of Cape Breton and the main'and, these same factors have an important bearing. With a labour personnel that is uniformly skilled and competent, the variation in output efficiency can be seen from the following table submitted by the operators in their evidence:

TONS OUTPUT PER MAN SHIFT WORKED

Year	Dominion	Springhill	Acadia	Sydney Mines
1913	2·51	1·4	1·72	1·06
1919	2·06	1·6	1·28	1·03
1924	2·53	1·9	1·65	1·91

The figures of 1924 show contrasts which fairly reflect the conditions in the different districts. These outputs are, we believe, in the light of the physical conditions, indicative of good work on the part of the men and of efficient mining engineering on the part of the operators.

The Sydney Mines unit has improved considerably, and when the Longwall system of working the seams becomes more general, the property will attain even to a higher standard of efficiency.

Springhill and Acadia present peculiar and difficult problems, which will continue to impose serious limitations upon economies in the working of these properties.

(ii) Wages

We have dealt sufficiently with wages in other sections of our report.

(b) Storage and Power Costs

From comparable figures at our disposal, we regard the proportion of costs under this heading as normal. It is to be observed that the developments of power plant displace labour cost to some extent, and in themselves contain a labour charge which formerly would appear under the heading of labour costs.

(c) General Expenditures

The figures under this heading for 1921 and subsequent years are loaded by charges incidental to overtaking certain classes of work necessarily deferred during the war period by reason of the conditions then prevailing. A suggestion was made in the evidence of certain witnesses for the men that these charges should have been spread over a longer term than they were, and that a proportion should have been charged to capital account rather than to revenue account.

The auditors of the operators' accounts have, we understand, insisted on this outlay being regarded as a proper revenue charge. We do not substantially differ from this view; and in other respects we do not regard the charges under this heading as in any sense abnormal, or the policy of distribution adopted, as unfair.

30.—Costs of Transport

We have carefully examined the transport costs from the respective collieries for 1914 and 1924.

(a) Transport Charges by Rail

These are in part outside the control of the operators. We think that on the whole they show too high an increase over pre-war times, and that the railway operators—whether they be the Corporation or other Railway Companies—should reconsider them with a view to reduction.

(b) Transport Charges by Sea

These are in our view reasonable. Coal is carried in the operators' own ships or in ships chartered by the operators. The rates charged just cover costs of operating, without even allowing for depreciation, and are not excessive. In this connection, we have had the books of Halifax Shipyards examined. Work done upon the ships owned by the operators forms only approximately one-fifth of the total annual turnover of the Shipyards. The overhead charges of the Shipyards are naturally high, in view of their extensive plant, but the prices charged to the work done on the operators' own boats compare favourably with the charges on outside work.

(c) Pier Expenses and Trimming

The same remarks apply to these as to railway rates.

31.—Costs of Distribution and Marketing

With reference to the costs of distribution and marketing of coal, the disposals in the under-noted markets are all that call for special comment: Montreal, Three Rivers, Quebec, St. John, Halifax.

From the time the coal leaves the mines, it is subject to charges varying according to its destination.

As the main market is Montreal, and it is to a large degree typical of the other two on the St. Lawrence, a description of the nature of the charges involved in distribution is of interest. These charges are: Cartage and Rail Freight, Barge Hire; Caretaking of Barges and Repairs thereto; Tug Service; Trimming into Bunkers; Delivery to Carts and Cars; Wharfage and Wharf Repairs; Proportion of Montreal Office Expense and General Salaries; Proportion of Taxes, Insurance, Rentals, Bad Debts, etc.; and loss from Coal Heating.

There is also the expense involved in Discharging, Dumping, Repairs to Dumping Plant, and Coal Shortages.

It is obvious that a large proportion of the expenses are of the nature of standing charges, which are seriously affected by any diminution of traffic, in so far as the cost per ton is concerned.

The cost for 1924 at Montreal and other St. Lawrence points, when compared with 1914, disclose an increase, but upon investiga-

tion such increase is, we think, not abnormal, when regard is had to the respective tonnages of 1924 and 1914, and the higher standard of labour costs, wharfage rates, harbour dues, etc., now prevailing. The St. John market, in addition to the usual charges, has to carry charges for lighterage, and viewing the cost as compared with 1914, we think the increase normal.

In view of the public representations and public evidence we received in respect of coal costs at Halifax, we thought it desirable to have the books of certain of the coal merchants examined by our advising accountant. We desire to record our thanks to these merchants for the facilities they willingly afforded in connection with that examination. The costs at Halifax suggest, when compared with 1914, that economies have been effected. We have come to the conclusion, however, that coal supplied under contract to large consumers is not bearing its fair share of outlays and overhead charges, and that consequently household coal has to carry a heavier load of charge than is fair. So far as profit is concerned, however, we do not think any undue charge is exacted. Household consumers are apt to overlook the accumulation of costs that must be added to pit head price in order to transport and deliver coal to them. Railway rates form an important item in these charges.

We would only add that comparison with the Montreal market prices is misleading. It is always unsafe to compare prices without being sure that one is comparing like with like in character, grade and quality. The evidence shows that the Halifax householder is fastidious as to quality.

Production in the Province is much greater than consumption, and in these circumstances sales in a competitive market like Montreal must be made on a smaller margin than sales in Nova Scotia, where competition from outside sources is less active—and perhaps less desirable. There is, nevertheless, some measure of competition in the number of smaller companies who find Halifax a convenient market.

The fact remains that the price of coal to the consumer at Halifax—and elsewhere within the Province is high, and we suggest that by fuller co-operation between producer and seller, something could be done to reduce costs all round. The public authorities also should consider the possible economies that might follow from the public control of discharging plant and storage accommodation.

VII—CAPITALISATION, GENERAL FINANCIAL ORGANIZATION AND COST OF MANAGEMENT

32—Capitalisation

The British Empire Steel Corporation was incorporated in May, 1920, under "The Companies Act" of the Province of Nova Scotia, with an authorized capital stock of $500,000,000, since reduced to $250,000,000. The Corporation's capitalisation is as shown by Schedule G appended hereto, which also indicates the relationship of the constituent companies comprised in the merger to the Corporation as a whole.

For easier reference and comprehension the position of the Corporation (in round figures) may be stated as follows:—

Funded and Mortgage Debt (represented by Bonds and Debenture stock of constituent companies)	$ 37,750,000
Capital Stock of Corporation (less 2nd Preference Stock held by constituent companies)	79,250,000
Preference Stock of constituent companies	11,750,000
Acadia Coal stock outstanding and par value of 1st Preference Stock of Corporation held in reserve to be exchanged for Preference Stock still outstanding of constituent companies less the par value of last mentioned stock	250,000
Total bonds and stock outstanding	$ 129,000,000
In addition there are depreciation and surplus reserves not capitalised of nearly	50,000,000
Thus making a grand total either due to bondholders or the property of the stockholders in the corporation of	$ 179,000,000
This sum is shown (again using round amounts) upon the Corporation's statement at 31st December, 1924 at follows:	
Book value of the Property Accounts of the consolidated companies	$ 164,000,000
Working Capital, including Inventories, Accounts Receivable and Cash, less current liabilities	15,000,000
	$ 179,000,000
The value of the above Property Accounts, etc., is based upon the following:	
Proceeds from sale of securities	$ 75,000,000
Surplus and depreciation reserves	50,000,000
Stock issued at time of organization of the various companies	54,000,000
	$ 179,000,000
As to the last item of promotion or organization stock, the Property Accounts of the following constituent companies at the date of their organization had been increased in round amounts as follows:—	
Dominion Coal Company	$ 12,500,000
Dominion Iron and Steel Company	15,500,000
Nova Scotia Steel and Coal Company	2,000,000
Halifax Shipyards	5,000,000
	35,000,000
While the British Empire Steel Corporation increased its Property Accounts on organization by	19,000,000
	$ 54,000,000

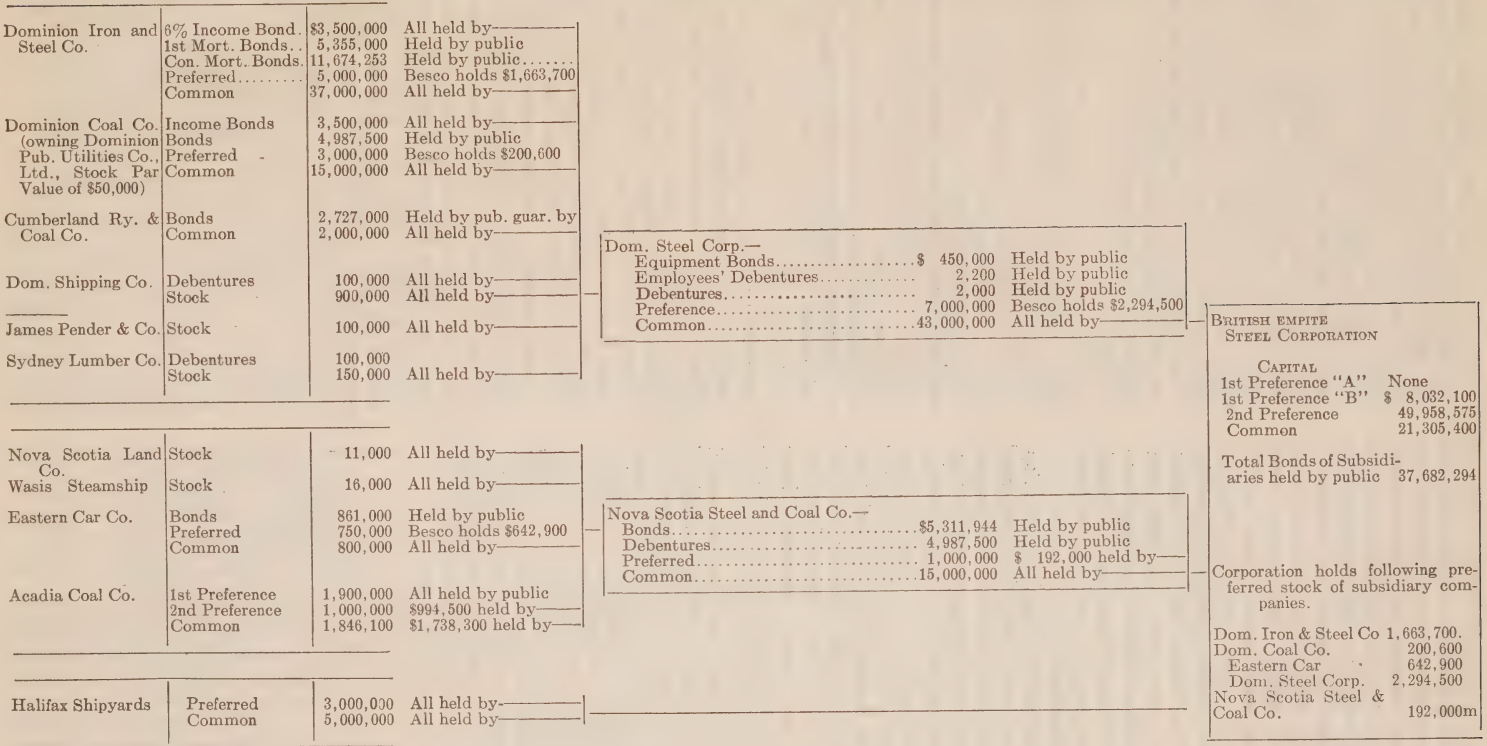
At the time of the formation of the British Empire Steel Corporation, the organisers apparently had before them:

(i) Book value of assets of companies they proposed to combine, amounting in round figures to $160,000,000; and

(ii) An appraisal which valued the works, plant and equipment (exclusive of working capital and of rights in coal and ore areas) of the companies included in the Dominion Steel Corporation, the Nova Scotia Steel and Coal Company and its subsidiaries, and the Halifax Shipyards, at a figure of $126,000,000; and a further appraisal or estimate which valued the rights in coal and ore areas of the Dominion Steel Corporation and the Nova Scotia Steel and Coal Company at a figure of $204,000,000.

With these valuations before them, and in the light of conditions then prevailing, the organisers of the British Empire Steel Corporation apparently followed, in the capitalisation of its assets and the issue of organisation stock, a practice which had been adopted by its constituent companies at their inception, and a practice which we are advised has not been uncommon in Canadian companies.

Further, in this connection, we received in evidence from the operators an explanation of the views they held at the time of incorporation as to prospects before the Corporation.



We do not feel called upon to comment further upon this feature of the financial organisation of the Corporation because, as no dividends have since incorporation been paid upon either its 2nd Preference or Common shares, the wage fund has not been adversely affected by any charges of this nature.

There is, however, no doubt that a substantial alteration has taken place in trading conditions as they exist to-day compared with those in force at the time of the organisation of the Corporation; and there is, moreover, a substantial alteration in the outlook for the immediate future, particularly as regards certain of the constituent properties other than coal properties; but to what extent the prospects as they appeared to the organisers at the time of incorporation are to be regarded —taking the long view—as being less substantial to-day for the properties as a whole than they were then, is so speculative a question we do not ourselves feel disposed to hazard an opinion upon it. We venture to say that, in our judgment, the only practical and reliable test to be applied to such a question is, in the circumstances, the financial one, viz.: the terms and conditions upon which necessary new capital can be obtained.

33—General Financial Organisation

During 1911 the Dominion Steel Corporation was formed, apparently with the object of merging the operations of the Dominion Iron

SCHEDULE G.—CHART SETTING FORTH FINANCIAL ORGANIZATION OF BRITISH EMPIRE STEEL CORPORATION

and Steel Company and the Dominion Coal Company. The merger was accomplished through the acquisition by the Dominion Steel Corporation of the common shares of these two companies, and the adoption on December 19th, 1912, of a Resolution by the Boards of Directors of the two companies. This Resolution purported to empower the Dominion Steel Corporation to deal with the output, organisation and funds of the Dominion Coal Company and the Dominion Iron and Steel Company jointly, upon the condition that the Dominion Steel Corporation should hand over to its two constituent companies from time to time the monies required to meet interest charges and dividends on preferred stock, and to provide for depreciation and sinking funds.

This Resolution was rescinded on 19th September, 1924, but until that date the steel plant and the coal properties had been treated as departments of the Dominion Steel Corporation and later on of the British Empire Steel Corporation.

Since the merger of 1921, all the subsidiary companies of the British Empire Steel Corporation have been treated as departments of the Corporation. All bond interest has been met, and, as already noted, dividends have been paid on the preference stock of the constituent companies until January-April, 1924. No dividends have been paid on the second preference stock or on the common stock of the British Empire Steel Corporation since its inception; nor does there appear to have been any consistent policy of depreciation or depletion on the properties as a whole.

We have already recommended that the capital and other funds, as well as the operations, of the coal properties should, *so far as an accounting between the operators and the miners in respect of wages is concerned,* be regarded as separate and distinct from the other properties of the Corporation.

34.—Cost of Management

Evidence was produced to us which showed that the operators have recently undertaken a close examination of the administration and office organisation of the various constituent companies, as well as of the Corporation. As a result of the cutting down of staff and reduction of salaries, a saving has been effected which, on becoming fully operative in the expenses for 1925 will show a reduction of approximately $800,000 as compared with the 1923 period.

Whatever readjustments may be possible within the personnel, it does not seem to us that the management expenses of the Corporation, as they now stand, are excessive, whether one has regard to the Corporation as a whole and the magnitude of its operations, or whether one looks only at the coal properties and their organization.

We are strongly of the opinion, however, that in the interest of *proper and sympathetic management and administration* of the coal properties, it is desirable that they should be under the control and authority of a *resident executive officer* whose technical training, mining experience and status should be such that he can be charged with and become responsible for the initiation and direction of the coal policy of the operators.

VIII.—UTILIZATION OF COAL FOR COKE

35.—Difficulties of Present Position

It is apparent from the evidence that two problems demand solution before the situation in the Nova Scotia coalfields can be stabilized:

(a)—Continuity of employment for the men;

(b)—Steady operation of the mines, so as to ensure the highest possible economies in operation.

Practically fifty per cent, of the coal disposals of the *Cape Breton* collieries are water borne to the St. Lawrence market, sea transport to which is not open in the winter months. In the absence of access to Southern markets, it is obvious, therefore, that the Cape Breton collieries are largely dependent upon the St. Lawrence markets.

Within the last few years, the competition in that market from low-priced U.S.A. coal mined in the West Virginia area has become very acute—over-development of the American coal mines being a decided factor in this situation; but apart from the question of competition with U.S.A. coal, there is also to be considered the great increase in the use of hydro-electric energy, particularly in the Provinces of Ontario and Quebec. The combined consumption of coal in 1923 in these two Provinces was approximately 18½ million tons (or practically 60 per cent of Canada's consumption), while the coal equivalent of the water power installed is over 23,000,000 tons. These figures are substantial evidence of the extent to which coal has been supplanted by this form of energy. The market for coal in these Provinces is therefore restricted to domestic purposes, railways, gas works, and such industrial plants and processes as still require coal in some form.

36.—Coke for Domestic Purposes

The availability of anthracite from the U.S.A. for domestic purposes limits considerably the possibilities of the sale of Nova Scotia coal in the St. Lawrence markets for household requirements. The Ontario and Quebec consumption of domestic fuel alone is 4,000,000 tons per annum, and in recent years the market in these Provinces has been almost entirely supplied from anthracite importations.

The Dominion Fuel Board, since its inauguration in 1922, has been giving close attention to this problem. The reserves of anthracite in the U.S.A. may be exhausted in thirty-five years, and the quality is seriously deteriorating and the price is rising. Unofficial warning was apparently given in 1921 by the U.S.A. Bureau of Mines to the Canadian Department of Mines that "within a very short time Canada would have to work out her own solution for replacing the anthracite now imported from America."

From the reports and investigations made by the Fuel Board,—in regard to which we had the advantage of evidence from the Secretary to the Board—there is no doubt that a satisfactory coke for domestic purposes can be produced from most of the seams operated in the Cape Breton coal fields, having a heat value equal to U.S.A. anthracite as now sent to Canada. The friable nature of the Cape Breton coal renders the production of a large amount of slack inevitable, disposal of which is very difficult. This problem, would, however, be simplified by the conversion of coal into coke at selected points in Quebec and Ontario, as coal intended for coking has to be reduced to a fine state of division in any case.

An expert appointed by the Dominion Fuel Board to make a report to them on this problem, has drawn attention to the fact that development of hydro-electric power in Ontario has almost reached its limit, and any further expansion will necessitate the erection of a steam plant, probably of 100,000 H. P. capacity, which if supplied with gas for steam raising would involve the erection of coke ovens ample to solve the domestic fuel problem for the Province of Ontario. The Fuel Board agree that coking plants should be established, as set out in the following statement:

PROPOSED NEW BY-PRODUCT COKE PLANTS

City	Coal Carbonized	Coke	Surplus Gas in Millions Cu. ft.	Cost of Plant exclusive of Land
	Tons	Tons	M	$
Quebec	32,900	23,000	220,000	400,000
Montreal	574,000	401,500	4,000,000	2,500,000
Ottawa	78,500	55,100	550,000	1,500,000
Toronto	705,000	494,000	5,000,000	2,600,000
Hamilton	157,000	110,000	1,100,000	2,000,000
Port Colborne	365,000	255,500	2,560,000	2,000,000
London	53,000	37,200	365,000	No figure available
	1,904,000	1,376,000	13,795,000	11,000,000

37.—Co-operation Between Provincial Government and Dominion Fuel Board

We recommend that the Provincial Government should enter into active co-operation with the Dominion Fuel Board, for the purpose of exploring the possibilities of an immediate development along the lines indicated. The necessary coal, up to a further million and a half tons, can be obtained from the existing equipment in Cape Breton, and such an extra demand would stabilize employment throughout the year, and add considerably to the working efficiency of the mines. Banking of coal during the winter months could be resorted to, and would not, having regard to climatic conditions, result in any serious depreciation of the value of the coal for coking purposes.

We cannot, however, overlook the potential danger associated with the establishment of equipment or arrangements dependent largely upon Nova Scotia fuel, unless there is a certainty of a continuous and uninterrupted supply. Development along this line would, in our opinion, make it all the more necessary for the parties in the industry to arrive at a settlement of their difficulties in such a manner as would give some assurance of security.

ADDENDUM

By Major Hume Cronyn, K.C.

The commission as a whole did not feel warranted in expressing an opinion on some of the remedies suggested for relief of the coal industry in Nova Scotia.

These remedies touched on matters within both Provincial and Dominion control and of necessity involved a pronouncement on questions which for more than a generation have been the subject of political discussion.

The chairman of the Commission coming as he does from Great Britain and being out of close touch with our past controversies felt that it might be considered an impertinence were he to attempt to pronounce upon problems which must by their very nature be left to the judgment and decision of the people of Canada.

My colleagues, however, have agreed to give me an opportunity of expressing my personal opinion in the following addendum to our report.

As will later appear, the Provinces of Ontario and Quebec would be more directly and perhaps even adversely affected by the remedies suggested than would other portions of our country.

As a native and resident of the one, and a life-long admirer of the other, I take the liberty of making this appeal on behalf not only of Nova Scotia but indeed of the well-being of our Dominion as a whole.

It will appear from our report that one, perhaps the greatest, cause of distress and discontent is due to irregularity of employment in the mines. At the moment this statement is being penned there have been further outbreaks of violence in Cape Breton due to lack of employment with the destitution and ill-feeling consequent thereon.

The reasons for unemployment have already been explained, but to my mind that one which overshadows all others is the inability of Nova Scotia coals to compete in the St. Lawrence markets with those imported from the United States. This condition is due to the fact that in certain of the American coal fields, notably those of West Virginia, coal can be produced at a much lower cost than is possible in Eastern Canada. Some of the factors explanatory of this lower cost may be briefly set out:

(1)—The ease with which the coal can be mined and conveyed to the pit mouth.

(2)—The absence of gas and the benefit accruing from natural drainage.

(3)—The many economies possible, due to the fact that submarine mining is unknown, whereas more than half the output in Nova Scotia is mined several miles under the sea.

The marked difference in mining costs due to the above causes enables American coals to be transported, largely by water, from the field named and, after payment of the present Canadian import duty of 50c per ton, to be sold in Montreal and other Canadian markets at prices below the actual cost of production and transportation of Nova Scotia coal.

Most of the remedies suggested and set out below were forcibly brought to the attention of the Dominion Government in December, 1924, by a representative delegation headed by the then Premier of Nova Scotia. It would be a lengthy and perhaps unprofitable task to examine in detail the merits of each; suffice it to say that in my opinion the two first named are those best fitted to bring relief to what is little less than a national calamity.

1st—Federal assistance towards the establishment of coking ovens. This remedy has been fully discussed in section 36 of our report and need not be further elaborated.

2nd—A substantial increase in the import duty on all bituminous coal and anthracite screenings; or, in the alternative, a Federal bounty on coal shipped from the Maritimes to Montreal or beyond, and on coal shipped from Alberta or British Columbia to Winnipeg or Eastward.

3rd—Imposition of duty upon coal imported for steel making and metallurgical processes, or for the production of coke.

4th—The negotiation of a treaty with the United States providing for the abolition of duties on coal by both that country and Canada.

5th—The extension in application, amount and duration of the subvention granted in 1924 whereby the cost of transportation by rail of Maritime and Western coals may be lessened.

As already stated, the establishment of by-product coking plants and the imposition of a higher duty on importations of bituminous coal or Federal assistance by way of bounties appeal to me as the best methods of aiding native industries handicapped by conditions imposed by their nature and geographical position.

The economist may logically ask why an industry which cannot survive competition

should be allowed to exist and consumers in the Provinces of Quebec and Ontario may denounce any increase in the tariff as that must inevitably raise the price of bituminous coal. As one whose academic training has been that of the Manchester School I must admit the cogency of both question and denunciation. But there are considerations involved in this problem which transcend cold-blooded political economy or even the losses which may fall on the more thickly settled portions of Canada.

May I attempt in the briefest fashion to outline these considerations.

More than one-fifth of the population of the Province of Nova Scotia are directly dependent upon its coal industries and the subsidiaries thereof and over 12% of the revenues of the Province are derived from the royalties paid on coal mined. After spending weeks on the ground and discussing the question with many residents of the Province in all walks of life I concur in the statement made by the deputation before mentioned that "It is not possible to exaggerate the calamitous consequences to Canada should coal mining in Nova Scotia be permitted to decline."

Let us consider but two of these consequences. We in Ontario are accustomed, if not hardened, to the accusation made in the Prairie Provinces that the East treats the West unfairly but the sense of grievances unredressed which prompts this charge is as nothing to the depth of feeling which exists in the Maritimes against the Central Provinces of Ontario and Quebec. That resentment is of old standing and one of its causes is the belief that the Atlantic Provinces were more or less cajoled into Confederation by promises and alluring prospects which have failed of fulfillment. It is indeed not going too far to say that the tie of sentiment which binds Nova Scotia to the Dominion has worn very thin.

If then we of the Central Provinces are unwilling to sacrifice something of our prosperity on the altar of common citizenship to aid, perhaps indeed to save, the main industry of Nova Scotia, we may witness an estrangement of far reaching consequences. For it is not exaggerating the situation to say that the inhabitants of the Maritime Provinces are in a frame of mind that insists upon relief from the disadvantages under which they labour.

My appeal then to my friends (if I may so term them) of Quebec and Ontario and through them to the Parliament of Canada is on the highest ground of National unity. Let us, overlooking the pecuniary sacrifices involved, take the necessary measures to safeguard the welfare of our brothers by the sea.

The second calamitous consequence to central Canada which might follow a collapse of coal mining in Nova Scotia will become clear if we but exercise sufficient foresight to discover what will be the probable course of events in regard to the supply of American anthracite upon which to-day we almost wholly depend for domestic heating. As our report sets forth the lifetime of the mines from which we are supplied is limited and their exhaustion is already in sight. At the same time the demand for the American market has enormously increased. In the light of former actions, political and otherwise, and bearing in mind the warnings already given us, we need not be surprised if at some not far distant future an embargo be placed upon the export of anthracite. Should we not then be forehanded enough to protect ourselves against this day of reckoning by so encouraging the development of a native industry as to have available a plentiful supply of that unexcelled substitute, to wit: Canadian coke?

Lest objection be taken that from one cause or another Nova Scotia might be unable to supply the coal or coke necessary for our requirements it is suggested that the increase of the customs tariff or bounty grants should only remain in force so long as it is clear that the supply of the native product is ample for all purposes.

(Signed) HUME CRONYN.

THE LABOUR GAZETTE

PREPARED AND EDITED IN
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 26] FEBRUARY, 1926 [NUMBER 2

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

FURTHER seasonal losses in employment, as reported by employers in industries other than agriculture and fishing, were noted at the beginning of January, 1926, but the reductions were less than on that date of any other year of the record since 1920, and the situation was more favourable than at the corresponding period in the last five years. Reports received by the Dominion Bureau of Statistics from 5,708 employers in these industries showed that they were employing 733,175 persons on January 1, this number being less by 46,479, or 6 per cent, than the corresponding figure on December 1. The employment index number (the base 100 representing the number of employees of the same firms in January, 1920) stood at 89.6 on January 1, 1926, as compared with 95.3 on December 1, 1925, and 83.9 on January 1, 1925, and with 88.7; 86.3; 77.9 and 87.7 on January 1 in 1924, 1923, 1922 and 1921 respectively. The Employment Service of Canada reported a general seasonal decline in the volume of business transacted in December as compared with the previous month, the decline being even more marked than in the corresponding period of 1924. At the beginning of January the percentage of unemployment among members of trade unions was 7.9, as compared with percentages of 5.7 at the beginning of November, and 11.6 at the beginning of January, 1925.

The average cost of the weekly family budget of twenty-nine staple foods was $11.63 at the beginning of January, as compared with $11.56 for December, 1925; $10.77 for January, 1925; $10.78 for January, 1924; $10.52 for January, 1923; $11.03 for January, 1922; $14.48 for January, 1921; $16.92 for June, 1920 (the peak); $15.30 for January, 1920; $12.42 for January, 1918; and $7.73 for January, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, advanced slightly to 163.8 for January, as compared with 163.5 for December, 1925; 165.2 for January, 1925; 156.9 for January, 1924; 151.4 for January, 1923; 151.7 for January, 1922; 200.6 for January, 1921; 256.7 for May, 1920 (the peak); 233.4 for January, 1920; and 191.7 for January, 1918.

The time loss caused by industrial disputes in January was less than in December, but greater in January, 1925. Six disputes were in progress at some time during the month, involving 357 employees, and resulting in a time loss of 9,102 working days. Corresponding figures for December were as follows: nine disputes, 1,532 workpeople and 20,903 working days; and for January, 1925, twelve disputes, 731 employees, and 5,526 working days.

Combines Investigation Act, 1923

The trial of the fifty-three firms and individuals charged with forming a combine in the marketing of fruits and vegetables in British Columbia and the Prairie provinces opened at Vancouver on January 18 before Mr. Justice D. A. McDonald of the Supreme Court. As each of the defendants was entitled to challenge twelve persons on the jury list there was some delay in empanelling a jury, and the trial was adjourned to January 25 in order that additional talesman might be called. By noon of the next day the jury was empanelled and Mr. J. C. McRuer, K.C. addressed them, outlining the Crown's case, charging a conspiracy on the part of the firms constituting the Nash interests in Canada to defraud fruit and vegetable growers. He emphasized the broker's legal obligation to the grower and contended that the defendants had failed to meet their obligations in that respect, and that, by means of ownership of stock of brokerage firms, jobbing corporations controlled the brokerage business.

Objection by defence counsel to the admission of evidence contained in documents seized by the Royal Canadian Mounted Police outside the county of Vancouver, unless evidence of conspiracy within the county should be presented, was overruled by the Judge, who held that documentary evidence from outside the province might be admitted if the Crown could show that an overt act of conspiracy had

been committed in British Columbia. The point raised by the defence as to the admission of documents seized by Mr. Lewis Duncan, whose report as commissioner under the Combines Investigation Act led to the present prosecution, was based on a clause in the statute which provides that in no criminal proceedings other than a prosecution for perjury shall any oral evidence given in an investigation under the Act be used against the person furnishing such evidence. Mr. Justice McDonald ruled that documentary evidence received by the Commissioner was admissible.

Government policy on unemployment relief

The policy of the Government in relation to unemployment relief was announced in the House of Commons on January 28, by the Minister of Justice and was confirmed by a letter written by the Prime Minister on the same date to Mr. J. S. Woodsworth, member for Winnipeg Centre, and read by the latter in the House on January 29. The problem of unemployment relief is regarded by the Government as primarily one of local responsibility. The Federal Government is, however, willing, where distress exists as the result of unemployment and the situation reaches a point beyond the control of the municipality, to co-operate with the local and provincial authorities in bearing a share of relief work or other relief measures, depending upon the circumstances of the case. Any requests for assistance by the Dominion Government must, however, come from the municipality through the provincial authorities. The letter of the Prime Minister to Mr. Woodsworth, M.P., above mentioned, is as follows:—

"Replying to the letter received from Mr. Heaps and yourself, dated January 7, in which you ask whether it is the intention of the government to introduce at this session legislation with regard to (*a*) provision for the unemployed, and (*b*) Old Age Pensions, I would refer you, respecting provision for the unemployed, to the answer given in the House of Commons to-day by the Hon. Ernest Lapointe on behalf of the government in reply to a question by yourself, and which indicated the government's intention of carrying out with respect to emergency relief the practice adopted in co-operation with provinces and municipalities in the years immediately following the war. In answer to a question from Mr. Neill, Mr. Lapointe further intimated that it was the intention of the government to introduce at this session legislation with respect to Old Age Pensions.

"You will observe that the statement made by Mr. Lapointe was in accordance with the intimation which I gave to Mr. Heaps and yourself at the time of our interview, following the receipt of the communication herein referred to.

"With respect to amendments to (*a*) the Immigration Act, (*b*) the Naturalization Act, and (*c*) the Criminal Code, which were referred to at the time of our interview, I would say that having since taken up the proposed amendments with the ministers concerned, I feel I am in a position to assure you that legislation on these matters will also be introduced in the course of the present session."

Old age pension bill to be introduced

The Government leader in the House of Commons (the Honourable Ernest Lapointe) announced on January 28 that it was the intention of the Government to submit to the House during the present session a bill respecting old age pensions, based on the recommendations of the Parliamentary Committee which sat in 1924. This committee, in their final report (LABOUR GAZETTE, July, 1924, page 580) recommended:—

1. That an old age pension system be established at the earliest possible date for deserving indigent persons to seventy years of age and upwards.

2. That applicants for pension must be British subjects of at least twenty years' residence in Canada, or naturalized subjects of at least fifteen years' naturalization and twenty-five years' residence.

3. (a) That the maximum rate of pension be twenty dollars per month which will be lessened by private income or partial ability to earn:

(b) That one-half the amount of pension payable be borne by the federal government; the other half, by the provincial governments of such provinces as express by legislation their desire to adopt the system —the cost of administration to be borne by the provincial governments."

The committee estimated that under such a system there would be approximately 98,841 eligible pensioners, and that if all of these were to receive the maximum rate of pension, namely, twenty dollars per month, the federal government's portion of the total yearly expenditure would amount to $11,860,920. This amount, however, would be reduced by any private income or partial earnings.

Relief for unemployed war pensioners

Formal instructions were issued in January by the Department of Soldiers' Civil Re-establishment in regard to the continuance of the relief hitherto granted to war veterans with a disability of less than 20 per cent. A note on this subject appeared in the LABOUR GAZETTE for December. The following statement prepared by the Department was read by the government leader in the House of Commons on January 20:—

"The situation regarding unemployment relief to pensioners may be summarized as follows:—

In previous years all pensioners, whatever the rating of their war disability, were receiving unemployment relief from the Department of Soldiers' Civil Re-establishment, whether their war disability was or was not responsible for their failure to obtain employment.

In view of the early distribution of the canteen funds' moneys as provided by the statute of last session, it had been found advisable to confine the unemployment relief to those pensioners having a rating of twenty per cent and over, or to those cases where the disability is less,—when the war disability

precluded the pensioner from engaging in employment.

It is however, found that on account of the delay on the part of the different provincial governments in appointing boards of trustees, the moneys of the canteen funds have not as yet been distributed to the different provinces. The situation has brought to the knowledge of the Department of Soldiers' Civil Reestablishment the existence of several cases of hardship among low rating pensioners and new instructions have been sent to-day to the different units providing that the regulations in force last winter shall continue to prevail during this winter.

Coal mining Commission in New Brunswick

A commission to investigate conditions attending coal mining operations in Minto District was appointed by the Government of New Brunswick early in February. The circumstances leading to the appointment of this commission are outlined on page 95 of this issue, in the section which deals with recent strikes and lockouts. The names of the commissioners were announced by the provincial premier, the Honourable J. B. M. Baxter, as follows:—Messrs. E. R. Teed, Woodstock, N.B., chairman; Luke S. Morrison, Fredericton, N.B.; and George A. Stone, Moncton, N.B.

Racial discrimination eliminated in recent Act

The appearance of discrimination against oriental races was still further eliminated from the Female Employment Act of Saskatchewan at the session recently closed. This act requires the issue of municipal licenses to persons employing women in hotels, restaurants and similar establishments. The history of this legislation was outlined in connection with a legal decision reported in the last issue of this GAZETTE (Yée Clun versus City of Regina). The latest amendment extends the protection afforded by the act to all women instead of white women only, as formerly, thus removing the only remaining suggestion of race distinction. Municipal councils, however, are allowed full discretion in regard to the granting or revoking of licenses for the employment of women and their decisions are not to be subject to review by any court. It will be recalled that the judgment in the case above mentioned said in commenting on the attitude of the defendant: "It would be strange if the municipalities to which has been delegated authority of granting such special licenses could now go on and maintain the discriminatory principle which the Legislature had been at such pains to abolish."

The Female Employment Act, as originally passed by the Legislature in 1912 constituted a discrimination against Chinamen and other men of oriental origin by absolutely prohibiting the employment of white women to work in any restaurant, laundry or other place of business, owned, kept, or managed by a Japanese, Chinaman or other oriental person. This enactment was amended in the following year by striking out the words, "Japanese," and "or other oriental person," which left it applicable to Chinamen alone. Subsequently in 1918 the enactment was repealed altogether and a new enactment substituted making the act applicable to all employers irrespective of race.

Co-operation problems C.N.R. shops

Some of the problems arising out of the Co-operation Plan in the shops of the Canadian National Railways are stated on another page of this issue in the paper by Mr. R. A. C. Henry, Director of the Bureau of Economics of the system. The recent establishment of the co-operation plan was noted in the LABOUR GAZETTE for September, 1925, and in previous issues. It is desired that under the plan all the employees may receive their fair share in the benefits resulting from co-operation. Mr. Henry mentions, however, the difficulty of measuring the work performed, for instance, by the employees of the Maintenance of Equipment Department. The measurement of "time production" in railway shops presents harder problems than those in connection with production in manufacture. A committee is now engaged in evolving a plan by which the Company's "Premium Plan" may be extended to branches of the service where no accurate measurements of individual work have been made hitherto. Ultimately it is expected that all the employees will benefit from co-operative management in proportion to their contribution to production.

Purposes of pedlers and hawkers' licenses

Delegations from the retail merchants and "direct sellers" recently gave evidence before a committee of the Saskatchewan Legislature in connection with proposed amendments to the provincial Hawkers and Pedlers Act (The amendments actually made in the Act are outlined on another page of this issue in an article describing the recent labour legislation in the Province). The Hon. Premier Dunning informed the retail merchants that the object of this legislation was not to protect them against their rivals, but merely to reach a class of persons doing business in the province who were not otherwise contributing to the revenue. "You make a mistake," he said, "if you speak of the act as a protection to the retailers. Our concern

is with the contribution of classes of business to the taxation of the province and municipalities."

Certain abuses that have arisen in connection with licenses secured by corporations for their provincial agents have been dealt with lately in court proceedings in Saskatchewan. Such a case was noted in the LABOUR GAZETTE, July, 1925. In this case, the company carried on its business in the province only through agents, who solicited orders from door to door and afterwards delivered the goods ordered. The court, in giving judgment, pointed out that all corporations doing business through hawkers and pedlers do so through licensed agents, and that it would be a peculiar conclusion to find that a corporation which paid a tax of $20 a year under The Corporations Taxation Act could send its agents to hawk and peddle through the province without restrictions, while other persons and corporations, who undertake a much heavier burden of taxation, were not so privileged.

Industrial survey of Manitoba

The Industrial Development Board of Manitoba has already compiled reports on natural resources and compiled statistics to serve as basic material for an industrial survey of the province. The material collected also includes a market analysis of the prairie provinces and special reports on the Canadian markets for British and United States products. This Board was formed last year, the Legislature having appropriated $12,000 for a survey of the industrial and agricultural resources of the Province, including the vacant lands available for settlers, water powers, mineral wealth, fisheries and forest resources, and for the purpose of co-operating with the recently formed Winnipeg Development Committee in the carrying out of its programme. The formation of the latter organization was noted in the LABOUR GAZETTE for May, 1925, page 443. It was formed during the preceding winter primarily for the purpose of finding a solution of the problem of unemployment, and the investigations of the members led them to the conclusion that unemployment could only be remedied satisfactorily through the industrial development of the city and province.

Child welfare regulations in Manitoba

The Child Welfare Board of Manitoba recently issued regulations governing the payment of allowances to bereaved and dependent children under the provisions of the Child Welfare Act, 1922 (This Act was described in the LABOUR GAZETTE for July, 1924, in connection with a proclamation declaring it effective from September 1 of the same year). The new regulations relate to the payment of allowances for the maintenance of bereaved and dependent children of fourteen years of age or under. Applications for such allowances are to be made in the first instance to the Child Welfare Committee of the municipality where the children reside. The committee is to report to the Director of Child Welfare on the result of their investigations, and the Director will report to the Child Welfare Board, the Board in its turn reporting to the Minister of Public Welfare for administrative action. Provision is also made as to the procedure to be followed where no local committee exists. Allowances are granted on the following conditions:—

The children must have been resident in the Province for two years prior to the father's death or confinement in a mental hospital in the Province (Special provision is made for children residing outside the Province at the time of the father's death or confinement, if they have resided for two years in the Province and if they, after the said death or confinement return to the Province to reside with relatives who can provide for them.) No allowance may be granted to a child whose father or mother, as the case may be, is not a British subject at the date of the application for such allowance; nor may any allowance be granted unless there are two or more bereaved and dependent children in the family. In case however of the death of both parents, or the continuous ill-health of the mother, allowance may be granted to a bereaved and dependent child. It is provided however that all allowances shall cease on the removal from the Province of any child or children receiving benefit under the Act; or, if in the opinion of the Child Welfare Board the mother or guardian of the child is guilty of immorality or unable to care properly for such child.

Minimum wages for women in hotels

The Minimum Wage Board of Manitoba published an order in the *Manitoba Gazette* for January 2, 1926, extending to all portions of the Province Regulation No. 5, governing the occupation of female employees in hotels, restaurants, clubs, victualling houses and refreshment stands. This regulation formerly applied only to Winnipeg, St. Boniface and Brandon. Complaints outside these centres were usually dealt with on their

individual merits and became matters of local adjustment. Alleged incidents of violation of the terms of the act became so frequent during the past few months that the Board at its last three meetings made thorough investigation and decided to alter their policy to cover the whole province. All the hotel regulations have now been consolidated and now cover all matters incident to the employment. The new regulations became effective from and after January 18, 1926. They are signed by G. N. Jackson, chairman, and Edward McGrath, secretary. The other members of the board are Mrs. Claud Nash and Mr. James Winning.

Sunday work forbidden in paper mills in Quebec

Complaints having been made by the religious authorities at Three Rivers the Department of Public Works and Labour of the Province of Quebec recently conducted an inquiry as to the extent to which Sunday labour was practised in the pulp and paper industry. It was found that large pulp mills, instead of closing on Saturday nights at 12 o'clock continued operations until 7 o'clock on Sunday morning. By this practice, the mill avoided having to start again on Sunday night. The system affected three shifts of eight hours each, and the same men were obliged to work on Sunday morning only once in three weeks. The Honourable Premier Taschereau, to whom the matter was referred for decision, confirmed the notification previously given to the paper mills that the Lord's Day Act would be strictly enforced in the Province.

Immigration to be promoted by Dominion Board of Trade

Mr. S. B. Gundy, President of the Toronto Board of Trade, suggested in his address at the annual meeting of the Board on January 25, that the new Dominion Board of Trade should aim in the first place at securing a large increase in immigration. "If the Dominion Board of Trade," he said, "concentrates on immigration and colonization, and forgetting those things which are behind, presses forward to the mark of one million more people advantageously placed throughout Canada, it will more than justify its existence." The plan to establish a Dominion Board was noted in the December issue of this GAZETTE. The conference of Boards of Trade which was held at Winnipeg in November decided unanimously that a Dominion Board of Trade should be organized and a Committee was named which consists of the presidents of the London and Hamilton Chambers of Commerce, Toronto and Montreal Boards of Trade and Montreal Chambre de Commerce, to prepare and submit a plan for organization and finance to the Boards of Trade and Chambers of Commerce of the Dominion for final ratification.

Civil servants' superannuation in British Columbia

A superannuation Act for Government Employees in British Columbia was enacted by the Provincial Legislature in 1921. This act was described in an article on "Employees' Superannuation in Canada" which appeared in the issue of the LABOUR GAZETTE for February, 1924 (page 131). Since the act came into force the superannuation fund has been placed on a solid basis. Eighteen hundred civil servants, scattered through every part of the province and even in the frontier outposts, are now under the protection of the fund. The provincial police are included in the number. The cash on hand in the fund to meet pension charges has grown to $1,043,885. The fund is built up by scaled equal contributions by the government as employer and the civil servants as employees. The gross liability of the province at the end of 1925 for pensions to civil servants was $2,258,497. This amount is compared with the total of $1,768,233 which civil servants would have been eligible to receive if the old system of pensioning off employees were still in force. But at the same time, because of the funding and compounding of the regular contributions, the total saving to the government under the new system reached a total of over $600,000 at the end of 1925.

"Merit Rating" of employers under Workmen's Compensation

Mr. E. S. H. Winn, chairman of the Workmen's Compensation Board of British Columbia, has announced that the system of "merit rating" is to be introduced in fixing the assessments charged under the Workmen's Compensation Act against the various industries in the Province. Under this system employers with a good accident record pay a lower rate than those with a bad record. The British Columbia Act provides at section 29 that "Assessments may be made in such manner and form and by such procedure as the Board may deem adequate and expedient, and may be general as applicable to any class or subclass, or special as applicable to any industry or part or department of an industry."

"Merit rating" has been in effect in Ontario since 1917, an amendment to the act being passed in that year to provide that "a system of merit rating may, if deemed proper, be

adopted" (section 85 (4). Individual distinction between employers even in the same line of industry is now made according to their accident experience. Where the accident cost exceeds or falls short of the amount of assessment by a stated percentage, a merit rating charge or a merit rating refund, within specified limits, is made accordingly. The report of the Ontario Board for 1921 stated that a maximum difference of 55 per cent of assessment was then made between the employer with a good, and one with a bad, accident experience. Refunds up to 30 per cent were made to the former, and additional charges up to 25 per cent were levied on the latter. For 1920 $311,874 was refunded, and $184,844 collected under this arrangement.

The merit rating system meets the objection sometimes raised against the principle of collective liability of employers under Workmen's Compensation, namely, that the careless employer pays the same rate of assessment as one who takes precautions to avoid accidents.

Mediation Plan for United States railways

A new Railroad Labour Bill is now under consideration by the United States Senate. The bill would abolish the existing Railroad Labour Board and establish new machinery for the settlement of industrial disputes. The railway executives and the organized railway brotherhoods have agreed on the principles of the bill. Under its provisions disputes would first be considered in conference between the parties directly interested, adjustment boards being established by these parties to decide grievances or disputes over the application of existing agreements on wages, hours or conditions, but not to consider changes in those agreements. These boards are similar to the impartial chairmanship arrangements in the clothing trades, and may provide an important influence in keeping the peace. Basic changes would be discussed in the traditional way by conference between unions and managements. To deal with disputes of any sort not decided in conference or by adjustment a Board of Mediation would be created, with power to intervene at the request of either party or on its own motion. It would have no arbitral powers but merely strive to bring about adjournment, and failing that, to induce the parties to arbitrate. This is a revival of part of the machinery existing before the war.

The bill was criticised in the Senate on the ground that the public interest was not protected by a provision that would insure uninterrupted service, and amendments for this purpose were proposed.

Constructive unionism

Mr. George L. Berry, president of the International Printing Pressmen and Assistants' Union of North America, during a recent visit to Canada in the interest of this organization, stated that a great opportunity for constructive work now lay before the trade union movement in Canada and the United States. The unions could improve craftsmanship, co-operate in eliminating waste and inefficiency in industry, and promote industrial stability. In regard to improved craftsmanship the Pressmen's Union is conducting a large technical trade school as well as an engineering and productive department which constantly aims at increased productivity in quality and quantity. "The greatest possible effort," he said, "is put forth to escape the pain and losses of strikes and lockouts, and every possible effort is being put forth to accentuate the principle of co-operation, peace and constructive industrial development. The Pressmen's Union has in the main removed that costly uncertainty of relationship as between employing printers, the publishers and our organization. There is a sense of security prevalent upon the part of both the employer group and the employee group, and from it has come that renewed energy, interest and affection for the business upon which they are both dependent for their economic standards."

Wage board in South Africa

During 1925 the Parliament of the Union of South Africa passed a Wage Act, which supplements the Industrial Conciliation Act passed in the previous year (LABOUR GAZETTE, June, 1924). The new act as outlined in the *South African Labour Gazette* for October, 1925, provides for the constitution of a Wage Board for the Union to consist of three members with power given to the Government to add two members for any particular inquiry, one to represent the employers and one to represent the employees. In order to expedite the work of the board, divisions of the board may be created for *ad hoc* inquiries, but the proceedings do not become effective except as endorsed by the Wage Board itself. The Wage Board begins to function upon a requisition by the Minister or on the application of a registered trade union or association of employers, or, where no such registered union or association exists, on the application of employees or employers who satisfy the board as to their representative character. The proviso is made, however, that where there exist registered organizations of both employers and employees sufficiently

representative, the Board shall not proceed with any investigation in respect of such trade unless directed to do so by the Minister. The object of this proviso is to empower the minister to insist upon resort to the conciliation machinery before application to the wage board for a compulsory determination.

The act defines the considerations which have to be taken into view by the Board in investigating wage and labour conditions, as well as the subjects upon which the minister may make a determination in accordance with any report or recommendation of the Board. The act further provides for duties of inspection, for the maintenance of certain records, and for a complete system of co-operation between the industrial inspectors of the Department of Labour and the investigations of the Board.

The date of the promulgation of this act has not yet been decided upon, but is not likely to be unduly delayed.

The bill, while in the course of discussion, was subjected to considerable discussion both in Parliament and in certain sections of the press. The principal line of objection has been not so much on the score of wage determination under statutory authority, but rather on account of the particular type of machinery set up by the Wage Act, namely, the imposition on industries of a statutory Wage Board with full powers to make recommendations which may be given the effect of law. It will be observed that the Wage Act expressly protects the machinery of the Conciliation Act, and that the voluntary system is available for every industry desirous of using it. Thus there is kept open a self-governing alternative for industries which desire to avoid wage determination by the Wage Board. It may be recalled that the Industrial Disputes Act provides for the prevention and settlement of disputes between employers and employees, for conciliation, for the registration and regulation of trade unions and private registry offices, etc.

Government unemployment relief in Denmark

With the object of relieving unemployment during the winter, an Act was passed in Denmark on December 1, 1925, for the granting of State loans to municipalities and private undertakings to enable them to carry out work planned to begin before June 1, 1926. The Ministry of Social Affairs is authorized to expend eight million kroner (over two million dollars) for this purpose. The greater part of this sum will be used for building, road repairs and other work of public utility. Private firms may participate to the extent of 2 million kroner out of the total of eight millions for work of an approved nature which admittedly cannot be more suitably undertaken by the municipalities.

Loans granted to the municipalities are to bear interest at the rate of 5½ per cent per annum and must be repaid within thirty years. The necessary sums will be advanced from the Central Unemployment Fund, which will receive corresponding amounts of 5 per cent State bonds from the Ministry of Finance. These State bonds are to be redeemed within thirty years, repayments on the loans being received by the Treasury for accumulation in a separate fund intended for the cancellation of the bonds within that period.

The Act further provides that in addition to the grants made under an act of 1924 in aid of expenditure for wages on relief works, grants may be made to help to defray the cost of materials for relief works which are to be put in hand before June 1, 1926. Such grants may not exceed 20 per cent of the cost of these materials, which must be of Danish origin or manufacture. For this purpose, the Central Unemployment Fund is to set aside a sum not exceeding 1 million kroner.

The Director of Dental Services for Ontario announces that the first complete dental clinic in Ontario is shortly to be opened in a large provincial plant employing more than 1,000 men. It is estimated by the dental services that 90 per cent of the industrial workers need dental attention. Moderate prices are to be charged at the clinics which, it is hoped, will be started in various industries.

An old age pension bill which recently passed the Legislature of the State of Washington provides for the pensioning of any person who has attained the age of sixty-five years and has been a citizen of the United States for fifteen years, a resident of Washington fifteen years and a resident of a county in the State five years. The bill has still to receive the assent of the Governor.

The Workmen's Compensation Board of Ontario awarded during the month of January $425,349.23 in benefits, $346,213.29 being for compensation and $79,135.94 for medical aid, as compared with $471,256.85 total benefits during January a year ago, of which $406,940 was for compensation and $64,316.85 medical aid. During the month 4,465 accidents were reported, 24 of them being fatal. The total for December was 5,207, of which 28 were fatal, and the total for January a year ago was 4,042, of which 19 were fatal.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

THE employment situation as reported by the local superintendents of the Employment Service of Canada at the end of January was as follows:—

In Nova Scotia, while storms were interfering to some extent with the fishing industry, the catches were reported as good. The logging industry was active, as fairly extensive lumbering operations being carried out this year were progressing favourably. Although the iron and steel industry was inclined to be quiet, other lines of manufacturing, particularly saw mills, were busy. The construction industry in all branches was seasonally quiet. Carriers reported freight as rather heavy, and the activity of winter ports was noticeable.

Profitable catches were reported by the fishing industry in New Brunswick. In the same Province logging was very active and, although placements of bushmen had previously been heavy, some were still being made. Most manufacturing concerns reported activities as favourable. Due to winter conditions constructions was inactive. Transportation companies reported conditions as good, but trade was only fair.

From Quebec it was reported that there was not much demand for farm hands. Logging concerns were still taking on a number of bushmen. Although January generally speaking is a dull month, manufacturing showed no appreciable diminution in activity. In most lines manufacturers were fairly active; the boot and shoe industry in Montreal was reported as improving, but in Quebec was quiet; the textile lines in Montreal and Sherbrooke were busy; and the pulp and paper industry, especially at Three Rivers, was normal. Though satisfactory for the season, work in the building trades was not active. Conditions generally were satisfactory, though the small snow fall was not providing the casual work which would be the case with a heavier precipitation. The City of Quebec seemed to be the least favoured centre in the province insofar as employment is concerned.

From Ontario it was reported that in spite of some unemployment in certain localities employment conditions generally were substantially better than at the same season for some years. Demands for winter farm help were fair. Construction was very quiet, as is always the case in the month of January. From Central and Southwestern Ontario reports indicated that manufacturing was fairly busy and any changes were in the direction of improvements rather than that of curtailments. In Northern Ontario mines, logging operations and pulp and paper mills were all active, although no substantial increases in numbers employed were reported. The customary winter snow shovelling at different points in the Province provided a certain amount of casual work which assisted in relieving local conditions. From practically all centres the prospects for the spring were reported as promising.

Only fair demands for winter farm help were reported from Manitoba, and no shortage of applicants to take this work was in evidence. The construction industry appeared to be very quiet. Placements of workers in the bush continued, though not in especially large volume. All in all, employment conditions in this Province were fairly quiet.

A number of applicants for farm work were registering at the employment offices in Saskatchewan, and, while there was some demand for their services, the agricultural industry was not able to absorb all of those seeking employment in it. The construction industry was all but dormant. Bush workers were in demand and a shortage of suitable applicants in this line was reported from Prince Albert. The customary winter casual work was being notified to the employment offices, but there were plenty of men to care for all such employment. A few districts again reported the usual shortage of female domestic workers.

From Alberta it was reported that the number of vacancies for farm workers was increasing, although there were plenty of applicants to accept the jobs. Building construction was quiet, but some sewer work had been started in Edmonton, partly for the purpose of providing relief to the unemployed. Preliminary reports on the prospects for railway construction work showed that a considerable amount of this would be available early in the spring. Coal mining was quiet. Continuous demands for some men for employment on logging operations were being received. While some unemployment was reported in most centres in this Province, increased placements in regular and casual work where tending to diminish the problem of coping with it.

The demands for men for the logging industry in British Columbia were not heavy and the industry appears to be fairly quiet. Although not increasing staffs, the metal mining industry was fairly busy. From Vancouver Island coal mining was reported as fairly active. Some small construction jobs were proceeding, although as in the other provinces, this industry, generally speaking, is quiet. Some unemployment was reported from prac-

tically every centre, but is was not in exceptional volume for the season of the year and apparently was not showing any tendency toward increasing at a rate deemed to be alarming.

EMPLOYERS' REPORTS.

Employment at the beginning of January, 1926, showed considerable seasonal curtailment, but the losses were the smaller registered at that time in any year since the record was begun early in 1920. The index numbers was slightly higher than on January 1 of any previous year of the record. Employment declined in all provinces, except the Maritime Provinces. In the Martime Provinces very heavy freight traffic caused employment in transportation to increase considerably, but there were losses in manufacturing, logging, trade and construction. In Quebec, the greatest decreases were those of a seasonal character in shipping; manufacturing, construction and logging also recorded reduced employment. In Ontario, manufactures, especially the iron and steel, lumber, food and textile divisions reported the most pronounced contractions, but

*Figures for end of previous months. †Bradstreet. ‡*MacLean Building Review*. §For group figures see articles elsewhere in this issue. **Figures for four weeks ending January 30, 1926, and corresponding previous periods. ***The index of the physical volume of business includes, forestry, mining, manufacturing, employment in wholesale and retail trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes, forestry, mining, manufacturing and construction. Manufacturing includes consumers' goods and producers' goods.

construction, transportation and trade were also decidedly slacker. In the Prairie provinces construction registered the greatest curtailment but manufacturing, mining, transportation and trade also reported reduced staffs. In British Columbia manufacturing, especially of lumber products, logging and construction showed the greatest losses, while coal mining was a good deal more active.

The trend of employment in all cities was downward. In Montreal, there was extensive curtailment in shipping and manufacturing and construction also released many workers In Quebec, the bulk of the loss was in transportation and construction. In Toronto manufacturing, transportation, construction and trade registered the most marked decreases, but all industries shared in the downward movement. In Ottawa, there were general though rather slight declines. In Hamilton, the losses took place in manufacturing, transportation and trade. In Windsor and the other Border Cities, the usual closing for inventory of large automobile factories in these cities caused pronounced though temporary reduction. In Winnipeg, construction and manufacturing afforded less employment. In Vancouver, manufacturing, especially of lumber products, construction and trade showed most curtailment.

A review of the returns by industries shows that the largest declines were in manufacturing; iron and steel, lumber, food, textile and tobacco factories registered the greatest reductions within this group, but in non-ferrous metal, building material, leather, pulp and paper, mineral products, and electrical appliance works, there were also considerable falling-off in employment. Construction and maintenance also released large numbers of workers and transportation and trade were also seasonally slacker. Mining as a whole, communication and services reported reduced activity and logging camps also provided work for a smaller number of workers than in the preceding month.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of January, 1926.

TRADE UNION REPORTS.

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month, with consequent variations in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Unemployment among local trade unions at the end of December, 1925, was considerably more prevalent than in the previous month, as might be expected at this season of the year when various trades and industries continue to show winter curtailment of operations. For this month returns were received from 1,556 local unions with a total membership of 148,922 persons, 7.9 per cent of whom were idle as compared with 5.7 per cent at the end of November and with 11.6 per cent at the end of December, 1924. Holiday shutdowns and winter seasonal inactivity affected the situation generally throughout the country, Nova Scotia and New Brunswick alone reporting any improvement over November and this was slight. The most noteworthy reduction was in Quebec where 4.4 per cent more unemployment was reported than in November, Ontario following with a 2 per cent decline, and the remaining provinces with lesser contractions than the two former mentioned. Unemployment in the manufacturing industries as indicated by 409 unions with a membership of 43,539 persons was considerably more pronounced than in November, a large share of the reduction being attributable to the holiday period. The most decided slackness was registered among iron and steel workers though the number out of work also increased among cigar makers, metal polishers, printing tradesmen, wood, textile, leather and glass workers, and general labourers. Considerable short time was reported throughout the different trades. A higher level of employment was maintained in the manufacturing industries during the period under review than in December, 1924, there being about 8 per cent change between the two months. The coal mining situation was better than in November in both Nova Scotia and Alberta, and in British Columbia no members were reported out of work. As in November quarry workers in Nova Scotia continued to be fully employed. Extensive contractions were registered in the building and construction trade, 21.0 per cent of the members being idle on December 31 as compared with 12.4 per cent in November. Seasonal inactivity was mainly responsible for the increased unemployment. More employment, however, was reported than in December, 1924, when 24.9 per cent of the members were out of work. All tradesmen in the group with the exception of painters, decorators and paperhangers and tile layers, lathers and roofers reported larger percentages of idleness than in November. Returns from 654

unions of transportation workers with a combined membership of 58,384 persons indicated 4.2 per cent of the members idle as compared with 3.1 per cent in November. Navigation workers reported the greater part of the unemployment though steam railway employees also were slacker. The situation for street and electric railway employees remained unchanged, and teamsters and chauffeurs were fully engaged as compared with an unemployment percentage of 1.1 in November. The governmental and personal service divisions representing 222 unions with 15,265 members, registered a slight change adversely. Retail shop clerks were fully employed. Lumber workers and loggers were much slacker than in November, and fishermen reported no unemployment.

An article elsewhere in this issue gives a summary of unemployment as reported by trade unions during the quarter ending December 31, 1925.

Employment Office Reports.

During the month of December, 1925, the offices of the Employment Service of Canada made 21,390 references to positions and effected a total of 20,523 placements. Of these placements in regular employment numbered 13,239, of which 10,443 were of men and 2,796 of women. The placements in casual employment numbered 7,284. The offices of the Service also received notification of 21,797 vacancies during the period under review, of which 14,510 were for men and 7,287 for women. Applications for employment were registered from 24,822 men and 7,980 women, a total of 32,802. It will be noted that a general decline in the volume of employment generally is shown in Canada when the above figures are compared with those of the preceding month as well as with those of December, 1924, the reports for November, 1925, showing 27,211 vacancies offered, 40,668 applications made and 25,796 placements effected, while in December, 1924, there were recorded 23,233 vacancies, 37,187 applications for work and 21,219 placements in regular and casual employment. In another section of this issue will be found a detailed statement of the work of the offices for the month of December, 1925, and also for the quarterly period September to December.

External Trade.

The summary of Canadian trade prepared by the Department of Customs and Excise shows that in December, 1925, the merchandise entered for consumption amounted to $76,918,288 as compared with $60,946,487 in December, 1924. The domestic merchandise exported amounted to $175,555,228 in December, 1925, as compared with $140,279,235 in November, 1925, and $124,429,462 in December, 1924. Foreign merchandise exported amounted to $843,699 in December, 1925, and $1,032,592 in December, 1924.

The chief imports in December, 1925, were: Fibres, textiles and textile products, $14,874,039; non-metallic minerals and products, $12,337,185, and iron and its products, $12,073,187.

The chief exports in the same month were in the groups of agricultural and vegetable products, mainly foods, $104,193,568; wood, wood products and paper, $23,565,607; animals and animal products, $18,329,661. In the nine months ending December, 1925, exports of agricultural and vegetable products, mainly foods, were valued at $438,357,509; wood, wood products and paper at $210,050,187, and animals and animal products at $155,260,697.

Production in Certain Industries.

Some figures indicating the movement of trade and industry in January and in previous months are given in the table on page 89.

The Dominion Bureau of Statistics reports that the production of pig-iron in Canada in December, 1925, totalled 54,889 long tons, a decline of 20 per cent under the 68,535 tons reported for the proceeding month. For the twelve months ending December, 1925, the total output of pig-iron at 570,397 tons showed a slight recession from the 1924 production of 593,024 tons which in turn marked a decline of 33 per cent from the 880,018 tons of 1923, but it was 49 per cent over the 383,057 tons of 1922. In 1925, the tonnage produced for the further use of the makers, consisted mostly of basic iron and represented 74 per cent of the total as against 61 per cent in 1924. Taking the population of Canada at 9,364,200 persons in 1925, the per capita production of pig-iron was 136 pounds, as against 144 pounds in the preceding year, 216 pounds in 1923, an average of 96 pounds in 1922, and 151 pounds in 1921.

In 1925, Ontario produced 370,000 tons of pig-iron or 65 per cent of the Canadian output as against 70 per cent of the total in 1924. Nova Scotia accounted for the balance in each year. In January, Ontario furnaces produced 20,000 tons of pig-iron and maintained this rate of output in February. In March large rail orders caused an increase in output to 41,000 tons which was also fairly well maintained during the next two succeeding months. In June, production fell to 26,000 tons and in July to 21,000 tons. In October, further rail orders caused an increase to 48,000 tons, the maximum monthly output for the year, after

which production declined to 40,000 tons in November and to 31,000 tons in December. Production in Nova Scotia showed a somewhat similar trend. In January, the output stood at 8,000 tons but rose to 23,000 tons in March and continued at this level until the furnaces were banked about the end of June. In July, there was no production from these furnaces but in August, they were started up again to produce 4,000 tons; the maximum output of 29,000 tons was reached in November; in the closing month of the year production was shaded to 24,000 tons.

In December, the production of ferro-alloys was 3,008 tons marking a slight increase over the 2,094 tons of November. The total for the year was 25,709 tons as against 26,400 tons in 1924 and 28,961 tons in 1923.

Reflecting the lowered output of pig-iron the December production of 62,353 tons of steel ingots and castings marked a drop of 15 per cent from the 73,205 tons made in the preceding month, and was slightly lower than the average monthly output of 63,000 tons for the year. The decline was mostly in steel ingots made for the further use of the producers. The actual figures for December were 60,699 tons of ingots and 1,654 tons of castings while for November 71,495 tons of ingots and 1,710 tons of castings were reported.

For the twelve months' period, 752,695 tons of steel ingots and castings were made; this was an increase of 16 per cent over the 650,690 tons of 1924. This year's output was composed of 733,855 tons of ingots and 18,440 tons of castings as compared with 625,175 tons of ingots and 25,515 tons of castings in 1923. Per capita production of steel in Canada was 180 pounds in 1925, as against 158 pounds in the preceding year, 217 pounds in 1923, an average of 121 pounds in 1922 and 170 pounds in 1921.

A review of the price trend during 1925 shows that iron and its products fluctuated within narrower limits, but at considerably lower levels than in 1924. Based on 1913 prices as 100, the Bureau index was 158.4 in January and 147.3 in December, a decline of about 11 points over the twelve-month period. February at 158.5 marked the high point for the year and November at 147.1 the low point. In 1924, the prices ranged from 168.5 in January to 154.8 in November.

Full statistics of coal production during December are not yet available.

The output of coal from Canadian mines during November was 5 per cent greater than the production of the preceding month, and equal to the average for November in the past five years. The figures were 1,649,686 tons in November as against 1,570,379 tons in October, and an average of 1,642,786 tons for the month during the five preceding years.

Alberta and Saskatchewan were the only coal-producing provinces of the Dominion which showed gains in output in November over the preceding month, while Nova Scotia and Saskatchewan showed increases over the average for the month in the five preceding years. British Columbia's production of coal was just equal to the average for the month in the five preceding years.

Men employed in the coal mines of Canada during November numbered 29,321 of whom 22,603 worked underground and 6,718 on surface as compared with a total of 27,407 in October, of whom 21,050 worked underground and 6,357 on surface. Production per man was 56.2 tons in November as against 57.0 tons per man in October. During November, the production per man-day was 2.6 tons, as compared with 3.5 tons in October. The tonnage lost (Table No. 5) was largely due to "lack of orders," "absenteeism," and "other causes."

The report from the British Columbia Forestry Branch shows that 176,315,733 feet of timber board measure was scaled in the province in December, 1925. The total amount of timber scaled in the province during 1925 is given as 2,233,715,607 feet.

The gross earnings of the Canadian Pacific Railway Company as given in a preliminary statement, were $19,818,544.67 in December, 1925, as compared with $15,690,171.63 in December, 1924. The gross earnings for the twelve months ended December, 1925, were $183,356,005.52 as compared with $182,502,156.26 in the twelve months ended December, 1924.

BUILDING PERMITS.

The value of the building permits during the month of December, 1925, showed a decline of 6.6 per cent as compared with the preceding month. In comparison however with the corresponding month of 1924, an increase of 13.6 per cent was shown. The total value for December was $7,191,830; for November, $7,696,099, and for December, 1924, $6,333,619.

The *Maclean Building Review* estimates the total value of the contracts awarded in January at $12,669,000 as compared with $12,675,300 in December last and $8,934,700 in January, 1925. Of the contenplated new construction in Canada in January, 1926, $4,553,700 was for residential building; $9,814,600 for business building; $2,340,000 for industrial building, and $3,315,800 for engineering construction (including bridges, dams, wharves, sewers, watermains, roads, streets and general engineering).

Contemplated new work in January aggregated $20,024,100 as against $42,132,800 in January, 1925. The activity was distributed among the provinces as follows:—Quebec, 33.0 per cent; Ontario, 28.2 per cent; Prairie Provinces, 31.4 per cent; British Columbia, 6.6 per cent and the Maritime Provinces, 7 per cent.

Strikes and Lockouts

The time loss due to industrial disputes in January was less than during December, 1925, but greater than in January, 1925. There were in existence during the month six disputes, involving 357 employees, and resulting in a time loss of 9,102 working days, as compared with nine disputes in December, involving 1,532 workpeople and resulting in a time loss of 20,903 working days. In January, 1925, there were recorded 12 disputes, involving 731 employees and a time loss of 5,526 working days. One of the strikes and lockouts commencing prior to January, and one of the strikes and lockouts commencing during January, terminated during the month. At the end of the month, therefore, there were four strikes and lockouts affecting 236 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected, but which had not been formally called off.

Prices

Retail food prices were again somewhat higher, the cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities was $11.63 at the beginning of January, 1926, as compared with $11.56 for December 1925; $10.77 for January 1925; $10.78 for January 1924; $10.52 for January 1923; $11.03 for January 1922; $14.48 for January 1921; $16.92 for June 1920 (the peak); $15.30 for January, 1920; $12.42 for January 1918, and $7.73 for January 1914. The most important increases occurred in bread, flour, and meats including beef, veal, mutton and pork, with less important increases in potatoes, evaporated apples and lard. Eggs, coffee, beans, and cheese were slightly lower. Including the cost of fuel and rent with that of foods, the total budget averaged $21.96 at the beginning of January 1926, as compared with $21.87 for December 1925; $21.09 for January, 1925; $21.23 for January, 1924; $21.13 for January, 1923; $21.52 for January, 1922; $25.30 for January, 1921; $26.92 for July 1920 (the peak); $19.80 for January, 1918; and $14.49 for January, 1914. Fuel was somewhat higher, due to advances in the prices of coal. Rent was practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics advanced slightly, being 163.8 for January 1926, as compared with 163.5 for December, 1925; 165.2 for January, 1925; 156.9 for January, 1924; 151.4 for January, 1923; 151.7 for January, 1922; 200.6 for January, 1921; 256.7 for May 1920 (the peak); 233.4 for January, 1920, and 191.7 for January, 1918. In the grouping according to chief component material four of the eight main groups were higher, three were lower, while one was unchanged. The Vegetables and their Products group advanced substantially, somewhat lower prices for grains, flour and milled products, rubber, and sugar being more than counterbalanced by much higher prices for potatoes. The Fibres, Textiles and Textile Products groups and the Iron and its Products group both advanced slightly, the former due to an increase in the prices of cotton and silk, and the latter due to an increase in the price of pig iron. The Wood, Wood Products and Paper group also advanced somewhat. The Animals and their Products group declined, mainly because of lower prices for live stock, eggs, butter, cheese and lard. The Non-ferrous Metals group and the Chemicals and Allied Products group also were slightly lower. The Non-metallic Minerals and their Products group was unchanged.

More than 400 farmers from Manitoba and Eastern Saskatchewan attended the annual farming school classes given at Winnipeg in January under the auspices of the Advance-Rumely Thresher Company. The school teaches owners and operators of tractors and threshing machines the fundamentals of design, construction, care and operation. With practical laboratory work under qualified instructors and lectures. The Honourable Premier Bracken, and Mr. J. H. Evans, deputy minister of agriculture of Manitoba addressed the students during the course.

A survey by W. J. Lynch, vice-president of a large contracting firm at Chicago, shows that one of the principal advantages of winter construction was that the more constant employment attracted better artisans and tended to avoid the peak demand of high wages and the scarcity of labour experienced every summer. "There is little, if any, difference in the amount of time lost between winter season and milder season work," Mr. Lynch said. "Delay due to severe cold and heavy snows does not amount to more than a week's time on a building, and equal delays due to rain in the milder season seem to have been overlooked."

STRIKES AND LOCKOUTS IN CANADA DURING JANUARY, 1926

THE number of strikes and lockouts during January was six, as compared with nine in December. The time loss for the month was greater than during January, 1925, being 9,102 working days, as compared with 5,526 working days in the same month last year.

Date	Number of disputes	Number of employees involved	Time loss in working days
January, 1926.....	6	357	9,102
December, 1925.....	9	1,532	20,903
January, 1925.....	12	731	5,526

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees at its commencement and lasting more than one working day. Disputes of only one day's duration, or less, and disputes involving less than six employees, are not included in the published record unless at least ten days' time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Four disputes, involving 194 employees were carried over from December. One of the strikes and lockouts commencing prior to January, and one of the strikes and lockouts commencing during January, terminated during the month. At the end of January, therefore, there were on record four strikes and lockouts as follows: fur workers, Montreal; women's clothing factory workers at Montreal; boot factory employees at Toronto, and moulders at Owen Sound.

The record does not include minor disputes as described in the previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected thereby, although the unions or organizations concerned have not yet called them off. Information is available as to four such disputes, namely, cigarmakers, Montreal, commencing March 24, 1925; moulders at Galt, August 2, 1922; moulders at Guelph, June 2, 1924, and upholsterers at Montreal, June 27, 1925. During the month information reached the Department that the strike of moulders at Sarnia, which commenced March 3, 1925, had elapsed.

One of the strikes and lockouts commencing during January was against a reduction in wages, and for shorter working hours, while the second one was to secure and maintain union wages and working conditions. Of the strikes and lockouts which terminated during January, one ended in favour of the employees, and the second one was indefinite.

Information was received in the Department, too late for the January issue of the LABOUR GAZETTE, of two strikes of clothing workers in Montreal, which commenced November 26, and December 9, and remained unterminated at the end of December, and are included in the table as commencing prior to January.

A dispute, possibly to be regarded as a strike or a lockout, occurred at Campbellford, Ont., on January 4, involving 26 spinners, who were dismissed because they failed to report for work on January 2. It had been previously arranged that the mill would be closed January 2, but owing to a rush order being received, the notice was removed, and orders were given that the spinners were to report for duty unless excused by the foreman. This, however, they failed to do and on reporting for work on January 4, were informed that they had, under the factory rules, automatically forfeited their positions and that they had been replaced by other workers. The employer reported that the spinners were being gradually reinstated.

A dispute was reported at Toronto between the carpenters and hoisting engineers' unions and the employers in the construction of a building, in which ten men were alleged to have stopped work on January 6, when the officials of the union told the men the job was "unfair." The allegations appear to be that the employer was not observing union rules as to wages and working conditions, as he had agreed, but this was denied and it was reported that all the men desired were available.

The following notes give particulars in regard to certain disputes in addition to information given in the tabular statement.

FUR WORKERS, MONTREAL, QUE.—This dispute, which resulted in a cessation of work on April 1, 1925, at Montreal, arose out of the failure of the parties to renew an agreement which expired at the end of 1924, remained unterminated at the end of the year, but the majority of the workers secured work in other factories, and the employers replaced the strikers to a great extent. The union had demanded better wages and working conditions than in the previous year. Some employers

agreed to this but others proposed individual agreements with the employees and discharged those who would not sign them. The union then called a strike.

Men's Clothing Factory Employees, Montreal, Que.—Twenty-five men's clothing workers were involved in a dispute alleged to be a lockout on November 26, 1925, owing to the dismissal of employees for attending a union meeting. Negotiations were carried on which resulted in work being resumed January 18, the employees being free to join the union, and securing an increase in wages.

Women's Clothing Factory Employees, Montreal, Que.—On December 9, 40 clothing workers ceased work against alleged violation of the agreement when the employer opened a non-union branch in the factory under separate management. Pickets were placed on duty and four employees were reported to have been injured and police protection was secured. The dispute remained unterminated at the end of the month.

Moulders, Owen Sound, Ont.—The strike of moulders which began January 19, 1925, against a reduction in wages, remained unterminated, there being still nine strikers out with strike pay, but the company reported the strikers had been replaced.

Coal Miners, Minto, N.B.—A strike occurred on January 4, of 290 coal miners against a reduction in wages of about $1 per day, and making a demand for shorter hours. On January 18, work was resumed at the rates and hours in effect prior to the strike pending an inquiry by a Commission appointed early in February by the provincial government.

Boot and Shoe Workers, Toronto, Ont.—A strike of 67 boot factory employees occurred on January 13, against change in wages and working conditions alleged to be in violation of the agreement. In connection with the picketing of the factory, one man was taken into custody for obstructing traffic. An arrangement was made with the authorities whereby two pickets might walk along the street near the factory and inform people of the dispute, but were not to block the sidewalk or molest any person going in or coming out of the factory. This dispute remained unterminated at the end of the month, although the employer claimed to have replaced the strikers.

STRIKES AND LOCKOUTS DURING JANUARY, 1926

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and lockouts commencing prior to January, 1926.			
Manufacturing—			
Fur and leather products (other than boots and shoes):			
Fur workers, Montreal, Que...	120	3,000	Commenced April 1, failure to renew agreements and proposed substitution of individual agreements. Unterminated.
Clothing (including knitted goods):			
Men's clothing factory workers, Montreal, Que.....	25	325	Commenced November 26, against dismissal of employees for union activity. Settled by negotiations and work resumed January 18. Employees won their demands.
Women's clothing factory workers, Montreal, Que.	40	1,000	Commenced December 9, against alleged violation of agreement. Unterminated.
Iron, steel and products:			
Moulders, Owen Sound, Ont...	9	225	Commenced January 19, 1925, against a reduction in wages. Unterminated.
(b) Strikes and lockouts commencing during January, 1926.			
Mining, Non-Ferrous Smelting and Quarrying—			
Coal miners, Minto, N.B.....	290	3,480	Commenced January 4, against a reduction in wages and for shorter hours. Miners resumed work January 18, under conditions in effect prior to the strike pending investigation.
Manufacturing—			
Boots and shoes (other than rubber and felt):			
Boot factory employees, Toronto, Ont.	67	1,072	Commenced January 13, against changes in wages and working conditions alleged to be in violation of the agreement. Unterminated.

STRIKES AND LOCKOUTS IN CANADA, 1925

THE number of strikes and lockouts in Canada recorded in 1925 was slightly greater than in 1924, but less than in 1923 and 1922, which in turn were smaller than in any year since 1916. The number of employees involved was smaller than in 1924, but about the same as in 1921 and in 1916. The time loss or number of man-working days lost, however, was about the same as in 1924, being approximately one and three-quarters million days. This was larger than the figure for 1923, but smaller than in 1922, when the total was nearly two million. Each year since 1921 has been marked by disputes involving large numbers of coal miners for relatively long periods of time, resulting in great time loss, but also by a relatively smaller number of other disputes and by relatively small numbers of employees involved in such disputes. From 1918 to 1921 disputes involving coal miners were relatively unimportant, and although strikes in other industries involved large numbers of employees the time loss was relatively small. Prior to 1919, the year of the Winnipeg strike, which alone with metal trade strikes caused a time loss of two million days, the years of great time loss, 1903, 1909, 1910, 1911, 1913, and 1917, were marked by coal mining strikes of considerable magnitude.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical tables, therefore, strikes and lockouts are recorded together, the term dispute being used with reference to either.

A strike or lockout included as such in the records of the Department, is a cessation of work involving six or more employees and lasting one working day or more. Disputes of less than one day's duration and disputes involving less than six employees have not been included in the published record unless a time loss of 10 days or more is caused. A separate record of such disputes involving less than 10 days time loss is maintained in the Department. During 1925 there was one such dispute, involving 7 employees for 4 hours, making a time loss of 28 hours, or about 3 working days.

The figures in this report are inclusive of all strikes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. So far as concerns figures given with respect to duration of strikes, numbers of employees concerned, etc., it is impossible always to secure exact information, but the estimate made in such cases is the result of painstaking methods in the collection of data, and, with increasing experience in dealing with the subject it is believed that the statistics indicate the conditions with reasonable precision. The estimate of time loss is reached by multiplying the number of working days during which each strike lasted by the number of employees involved in the dispute from time to time so far as known.

The accompanying chart of the time loss in working days by groups of industries for each year back to 1901, shows that in mining considerable time loss occurred in 1903, 1909, 1910, 1911 and 1913, and again in 1917, 1919, 1922, 1923 and 1924. In metal trades no great time loss appeared except in 1919, when the strikes in the metal trades in various cities and the general strike in Winnipeg in sympathy with the metal trades' strike there, caused a time loss of about two million days. In 1918, 1920 and 1923, however, the time losses (in these trades) were larger than in other years. In building and construction considerable time loss appeared in 1903, 1907, 1911 and 1919. In transportation there was considerable time loss only in 1901, due to a strike of trackmen, in 1908, due to a strike of railway shop machinists and in 1918 and 1919 due to numbers of strikes in street railway operation, as well as among freight handlers, in local transportation, cartage, etc.

From the chart showing results of the settlements arrived at it appears that the majority of employees were successful or substantially successful in 1905, 1906, 1915, 1917 and 1918, periods of steadily rising prices and expanding business, but were unsuccessful in 1908, 1919, and 1920, years of uncertainty in industry.

The following notes deal with the chief features in strikes and lockouts during the year 1925.

Disputes in Mining

The mining industry accounted for most of the time loss for the year, about 90 per cent, and also for the largest proportion of the number of employees involved, approximately 80 per cent. This was chiefly due to a single dispute in coal mining in Nova Scotia from March to August. Out of the 14 disputes in the mining industry all were in coal mines, except one, a strike of gold miners in Ontario involving eleven employees for two days.

General reductions in wages of coal miners

were made not only in Nova Scotia but in Alberta and British Columbia, both in the Crow's Nest Pass field adjoining Alberta and in Vancouver Island. The coal mining industry has experienced considerable depression since 1923, and though the union in the United States renewed the contract for 1920 wage rates at Jacksonville, Florida, in the winter of 1924 to be in effect till March 31, 1927, the non-union fields in the United States and all fields in Canada experienced strikes in 1924 and 1925, with wage reductions in many instances.

The Nova Scotia Coal Mining Dispute, March 6–August 10.—The most important dispute was that involving about 12,000 coal miners in various parts of Nova Scotia in a cessation of work from March 6 to August 10, resulting from a proposed reduction in wages of 10 per cent. The four employing companies involved, operating mines in Glace Bay and its neighbourhood, at Sydney Mines, at Stellarton and Thorburn in Pictou county, and at Springhill in Cumberland county, were constituents in one holding company and on the refusal of the employees to agree to a reduction, when the agreement should expire in January, 1925, applied for a Board of Conciliation under the Industrial Disputes Investigation Act, 1907. The Board was established, but found that it could not proceed, as the statute had recently been declared *ultra vires* by the Judicial Committee of the Privy Council. The Board attempted to settle the dispute by conciliation, but failing to do so recommended a thorough investigation by a competent authority. Various proposals were made by the parties to the dispute and by the Provincial Government, but none were acceptable. The cessation of work on March 6 was precipitated by the reduction in operations in certain mines and by the withdrawal of credit at company stores for employees in such mines. The organization of the miners called a "100 per cent strike," as authorized at a district convention at the commencement of the dispute, that is, maintenance men were called out. This was contrary to the practice in coal mining disputes as the parties usually agree that maintenance men shall take care of the mines as long as strike breakers are not employed, and in some cases development work or mining of coal for the mine boilers is provided for. Maintenance work was carried on by officials for some time, but later the mines were picketted and disputes arose, accompanied by disorders resulting in the calling in of the militia by the provincial authorities as provided by the amendment to the Militia Act, following disturbances in 1923. (LABOUR GAZETTE, July, 1924, p. 576). Mediation of the Minister of Labour, the provincial government and various persons, including the International President of the United Mine Workers of America, failed to bring about a settlement. Following a provincial general election the new government proposed an arrangement which was accepted and work was resumed August 10.

The wage scale of 1923, 6 to 8 per cent lower than that for 1924, was accepted for six months, pending an enquiry by a commission appointed by the provincial government to make a thorough investigation of the coal mining industry in Nova Scotia including its relations with other industries. Early in January this commission recommended that the wage reduction of 10 per cent should be made, but that wages should be adjusted according to the financial results from the coal mining operations and not according to the proceeds from all the industries related. Recommendations were also made as to housing for miners and other conditions.

The report of the commission was printed as a supplement to the LABOUR GAZETTE for January, 1926.

Coal Mining Disputes in Alberta.—The other principal disputes in coal mining were in Alberta and resulted from general reductions in wages. The signing of the agreement of October 10, 1924, between the Western Canada Coal Operators' Association and the United Mine Workers of America, District 18, terminating the strike of some 7,000 miners in Southern Alberta and South Eastern British Columbia from April to October, 1924, on the basis of a 12½ per cent reduction in wages, was followed by the closing down of some of the mines affected in the winter months, the operators stating that the mines could not be operated as the wage scale was too high. Certain operators and their employees then broke away from the Association and from the union respectively and entered into separate agreements providing for lower wage scales, the movement spreading eastward from the Crow's Nest Pass field and northward. Negotiations to amend the agreement failed and the disintegrating movement spread during the spring and early summer. (LABOUR GAZETTE, June, 1925, p. 510). In June the district officers of the union entered into an agreement with the operators in the Red Deer Valley, still parties to it, to reduce the wages about 15 per cent. A large number of miners refused to accept this arrangement, broke away from the union, organized an independent union, and picketted the mines which began to work under it, June 1, 1925. Whether these miners were on strike or not is not clear as the mines in which most of them were employed had not been operat-

15134—2½

ing for some time and did not attempt to operate. There is, however, little doubt that the dispute curtailed mining operations for the summer. Towards the end of September, the mines opened and the miners returned to work, the new scale going into effect but without an agreement. Subsequently, on November 30, some of them again struck for an increase in wages but returned to work by December 23, without an increase. In the meantime the miners under the United Mine Workers' agreement received an increase of 5 per cent, some receiving 50 cents per day, the agreement being again amended.

The coal mines in the city of Edmonton and its immediate neighbourhood had been operated under an agreement between the operators and a miners' union affiliated with the Canadian Federation of Labour since September, 1923. These agreements had been renewed in 1924 following an inquiry by a Board of Conciliation under the Industrial Disputes Investigation Act, 1907, (LABOUR GAZETTE, September, 1924, p. 744 and November, 1924, p. 937), and these agreements expired at the end of June, 1925.

A cessation of work occurred involving 400 miners as the operators proposed a wage reduction between 10 and 20 per cent for various classes. The Fair Wage Officer of the Department mediated and secured an agreement for a settlement between some of the operators and their employees at a wage cut of 13 per cent for the contract miners and 10 per cent for the day miners.

This was not accepted by a vote of the miners and the strike continued. During the summer there is little demand for coal and as it cannot profitably be stored there is little mining. In August, when the demand for coal increased, the miners accepted the settlement previously rejected and returned to work on August 26.

Disputes in Vancouver Island.—Wages of coal miners in Vancouver Island had been adjusted according to changes in the cost of living since 1917, the bonus rising from 50 cents per day in the spring of 1918 to $2.10 at November 1, 1920, and being down to about 90 cents by November, 1924, when the arrangement was abrogated, the bonus becoming fixed at about 90 cents. The agreements between the principal operators and the committees of their employees provided that this bonus should be altered according to changes in competitive conditions (LABOUR GAZETTE, December, 1924, p. 1090). In May, 1925, some of the operators stated that competition from other miner operators compelled them to reduce the bonus by 60 cents per day. At some of the mines this was accepted, at others a modification was made for employees below $4.20 per day, but at Nanaimo the miners went on strike June 5, returning to work on June 13, at the reduction proposed. This cessation of work involved 1,090 miners for seven working days.

Disputes in Manufacturing of Clothing

A large number of the disputes occurring in the various sections of this industry were owing to alleged violations of union agreements, or to maintain existing wages and working conditions. Both in the men's clothing factories and women's clothing factories in Montreal and Toronto a number of strikes occurred to maintain union wages and working conditions or to secure recognition of the union or union conditions as to wages and working conditions. In most cases these resulted in favour of the employees. The two most important of these were strikes to secure recognition of union, with union hours and wages, involving 115 factories and 1,350 employees in Montreal, and 60 factories and 1,200 employees in Toronto, beginning in February and ending in the spring, both being successful. Another dispute causing considerable time loss was in Montreal to maintain union conditions in a men's clothing factory, where the employer after a disagreement with the union alleged to be a violation of the agreement, operated under open shop conditions, replacing the strikers. This strike beginning in August was not called off by the union until the end of October and involved 181 employees for 51 days. In hat and cap factories three disputes occurred to secure or to maintain union wages and working conditions and resulted in favour of the employees.

Disputes in Manufacturing of Boots and Shoes

The three disputes in this industry were against new wage scales, containing piece rates which the employees stated would seriously reduce their earnings. In the first, that at Montreal, at the end of January the employees were successful. A similar dispute in the same city shortly after was settled by a compromise. The third occurred at Quebec toward the end of the year and involved over two thousand employees while many more were reported to be indirectly affected. An arrangement was made after two weeks' cessation of work to resume at a partial reduction, the new wage scale to be settled by arbitration.

Disputes in the Fur Manufacturing Industry

One of the most important disputes of the year occurred in the fur factories in Montreal. The agreement under which the factories were operating expired at the end of 1925, and the employees wished to include provisions for better wages and working conditions, with preference in employment for union members. The employers were willing to renew the old agreement but declined to agree to the changes proposed. Negotiations were broken off and the employers, fearing a strike later during the busy season, required their employees to sign individual agreements for the balance of the year. Some who refused were dismissed and the union called a general strike in all shops not under the union agreement. The picketting which ensued resulted in some arrests on charges of intimidation and assault, the trials being postponed with the accused out on bail. From time to time the employers replaced the strikers, and the latter in turn secured work in other shops, but at the end of the year there were still 420 on strike and receiving strike pay.

Disputes in Iron and Steel Manufacturing

The four disputes in this industry involved moulders in strikes against reductions of wages, five per cent in three cases and 10 per cent in the fourth. In one case a compromise at 2½ per cent was effected, but in the other cases the strikers were replaced. In the dispute at Owen Sound nine of the strikers were still out at the end of the year.

Disputes in the Fishing Industry

The two disputes in this industry occurred in the salmon fisheries on the Frazer River at New Westminster, B.C., the one in the spring and the other in the autumn, over the rates to be paid by the canners for certain varieties of fish. In each case a compromise was reached and work was resumed after a week's loss of time.

Disputes in Building

A number of the disputes during the year were caused by disagreements as to union jurisdiction. The two strikes of plasterers arose out of the differences between the two unions in which plasterers may be members in various localities, the settlement reached in 1911 being no longer satisfactory to both parties. This dispute affected plasterers in a number of cities in the United States and was finally referred to arbitration, existing conditions to remain undisturbed in the meantime. In the dispute at Kingston the two unions agreed to let the matter drop, and in the dispute at Toronto the building at which it occurred was finished before a settlement was reached. The dispute involving stone masons at Kingston was in regard to whether stone masons or stone cutters should do certain work, and after one day a settlement was reached. In the eight disputes regarding changes in wages and hours, the employees were not successful in four cases, but were partially successful in two and secured their demands in two cases. In the two strikes at Kingston against the employment of alleged labourers to do the work of mechanics the employees were substantially successful.

Disputes in Water Transportation

The three disputes in this industry involved Chinese employees on boats trading from British Columbia ports. In the first case the men stopped work because a bonus to which they had become accustomed had not been paid, but on its payment they returned to work. In the next case the men refused to work before reaching a Canadian port and were taken into custody. Upon the arrival of the boat at Victoria the men were charged with a violation of the Merchant Shipping Act, in not living up to the contract signed at Vancouver some months before. They were sentenced to imprisonment for 60 days and at the end of the term were deported to China. The men asked for wage increases, but it was also stated that the refusal to work was in conformity with instructions from the organization in China to which they belonged, which had called a strike of seamen on all British ships. The third strike of Chinese seamen occurred before reaching the port at New Westminster, and the men were taken into custody there and prosecuted at Vancouver for violation of the Merchant Shipping Act. They were said to be acting on orders from the organization at Shanghai and in sympathy with the strike of seamen there, and were sentenced to six weeks' imprisonment and then to be deported.

Analysis of Statistics

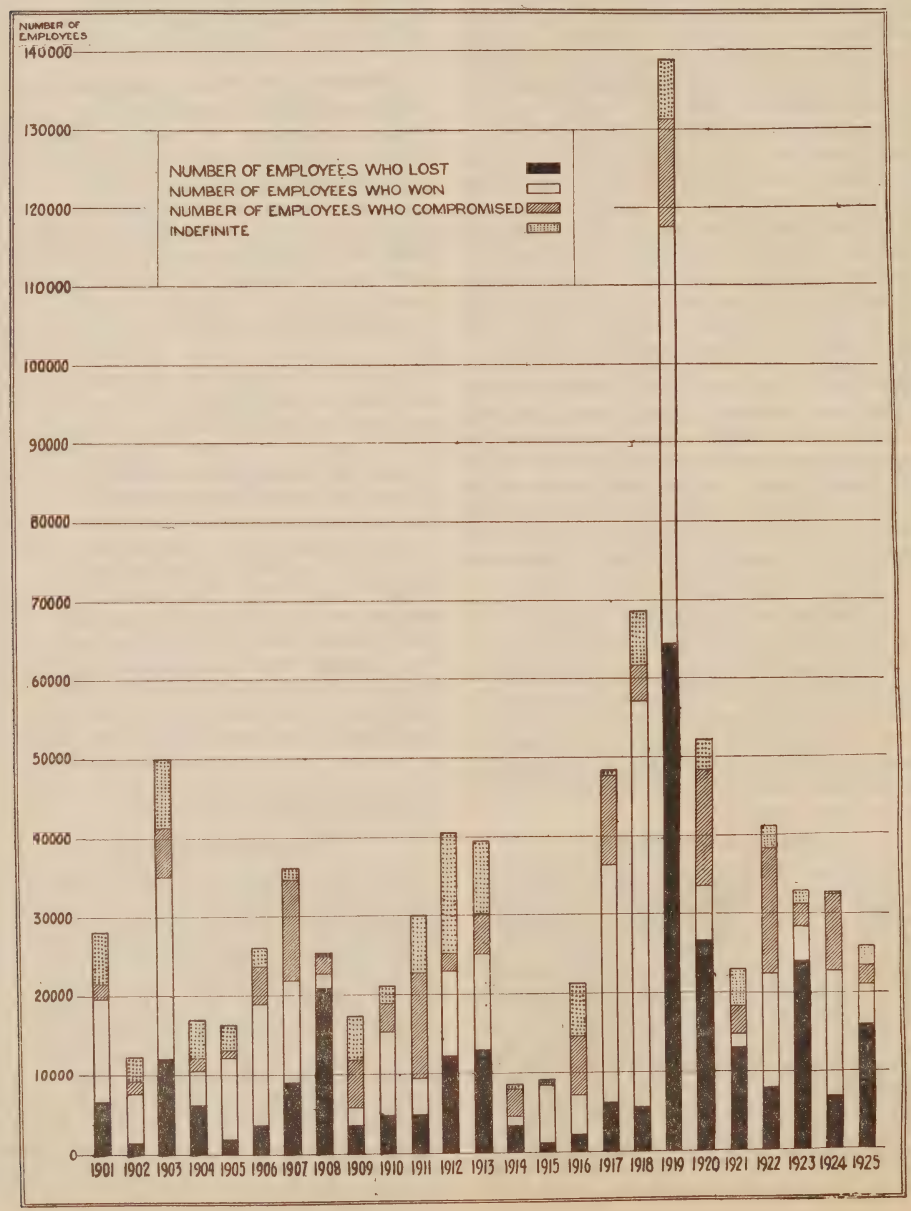

Table II analyzes the disputes during the year by the number of employees involved, showing only one dispute involving more than 10,000 employees (the coal mining dispute in Nova Scotia), which, however, caused a time loss of nearly a million and a half working days, about 85 per cent of the total for the year. There was one dispute involving between 1,500 and 2,500 employees, namely, boot factory employees at Quebec in November. It appears that 28 out of the 83 in existence during the year involved less than 25 employees each, and that 67 disputes involved less than 250 employees each, and that these

resulted in comparatively little time loss, 3.4 per cent of the total for the year. It appears, therefore, that apart from a few important strikes the year has been marked by a number of disputes involving relatively small numbers of employees for short periods of time.

Table III gives an analysis by time loss and bears out the indication of the preceding paragraph that most of the disputes for the year resulted in relatively little time loss, most of this being due to the one dispute.

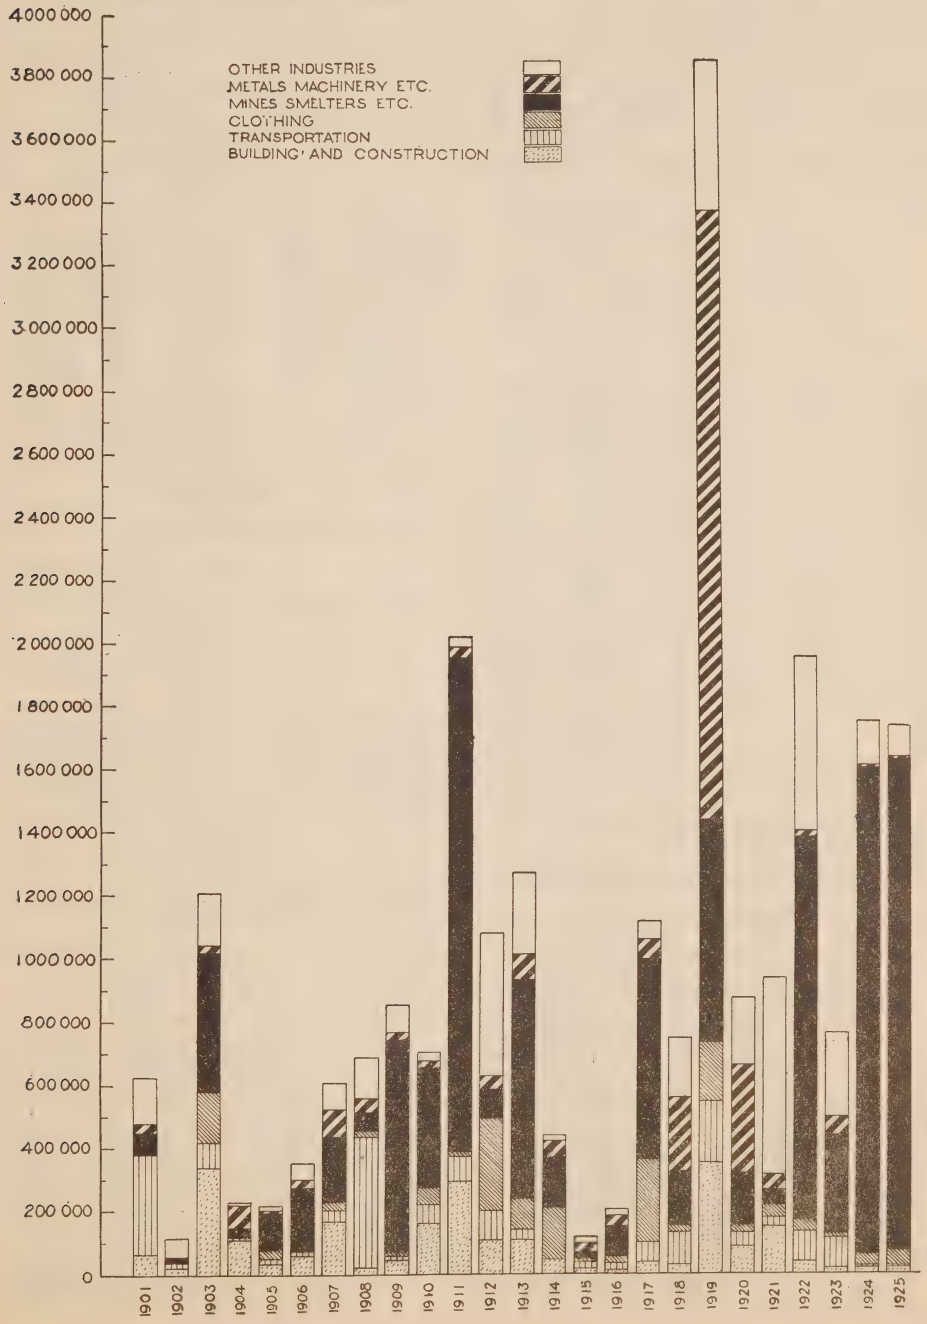

Table IV, an analysis by duration, shows that 26 out of 83 lasted less than five days,

RESULTS OF STRIKES AND LOCKOUTS ACCORDING TO NUMBERS OF EMPLOYEES INVOLVED IN 1901-1925

and that 59 lasted less than 30 days. The ten disputes lasting over 30 days (outside of those unterminated at the end of the year or not definitely ended during the year), included over half of the employees involved and resulted in 90 per cent of the time loss for the

TIME LOSS IN WORKING DAYS THROUGH STRIKES AND LOCK-OUTS BY GROUPS OF INDUSTRIES EACH YEAR 1901-25

year, including in addition to the coal mining dispute in Nova Scotia, three in Alberta, cigarmakers in Montreal, fur workers in Montreal and Toronto, several in clothing workers, one of papermakers, one of printers, two of moulders and one of upholsterers.

Table V, an analysis by provinces, shows Nova Scotia to have had the smallest number of disputes but the largest number of employees and greatest amount of time loss, owing to the great coal mining dispute. In Quebec there was almost the largest number of disputes, with a large number of employees and over 100,000 days' time loss, due chiefly to the disputes involving fur workers, clothing workers and boot factory employees. Ontario had the largest number of disputes, 25,

TABLE I.—RECORD OF STRIKES AND LOCKOUTS BY YEARS

Year	Number of disputes		Disputes in existence in the year		
	In existence in the year	Beginning in the year	Employers involved	Employees involved	Time loss in working days
1901	104	104	273	28,086	632,311

TABLE V.—STRIKES AND LOCKOUTS, 1925, BY PROVINCES

Province	Disputes		Number involved	Time loss	
	Number	Per cent of total	Employees	Working days	Per cent of total
Nova Scotia	3	3·6	11,487	1,478,802	84·8
Prince Edward Island	.....	.....	.....	.....	.....
New Brunswick	.....	.....	.....	.....	.....
Quebec	23	27·7	5,513	117,277	6·8
Ontario	25	30·0	2,738	38,494	2·2
Manitoba	4	4·9	122	532	0·0
Saskatchewan	.....	.....	.....	.....	.....
Alberta	14	16·9	3,200	89,756	5·1
British Columbia	14	16·9	2,736	19,135	1·1
Total	83	100·0	25,796	1,743,996	100·0

with about half as many employees involved as Quebec, but not a very great amount of time loss. Alberta and British Columbia had each 14 disputes, involving about 3,000 employees in each province, there being more time loss in Alberta, as the three coal mining strikes were somewhat prolonged. In British Columbia most of the disputes were in building but were not prolonged.

Table VI gives an analysis by industries. The largest number of disputes in a group appears in clothing manufacturing, 19 or 22.9 per cent of all in existence during the year, the mining and building groups coming next, none of the other groups showing many. The largest number of employees, about 60 per cent and 90 per cent of the time loss for the year appear in the mining group. A discussion of the principal disputes in each group appears in the introductory paragraphs.

Table VII, an analysis by industries and methods of settlement, shows that 56 disputes or nearly 70 per cent of all were settled by negotiations between the parties, 6 were settled by mediation of outside parties, in one there was a return on employers' terms, in 15 the strikers or locked out employees were replaced, and there were five unterminated or indefinite. None were settled by arbitration or by reference to a Board under the Industrial Disputes Investigation Act, 1907. In the coal mining dispute in Nova Scotia and the boot factory employees' dispute in Quebec, while resumptions of work were brought about by mediation, with partial changes in wages, the matters at issue were left to boards of inquiry.

Table VIII gives the statistics by months for the past six years. It shows that disputes are greatest in May or June of each year and tend to become less toward the end of the year. The relatively great time loss shown since 1921 is due mainly to the occurrence of widespread coal mining strikes, lasting for some months, except that in 1923, which lasted less than one month.

Table IX, an analysis by causes and results, indicates that out of 83 disputes in existence, five were unterminated or not definitely settled, 35 ended in favour of the employees, these involving nearly 5,000 employees out of about 25,000; 26 ended in favour of employees, these involving 15,000 employees, one dispute involving over 10,000; 17 ended as a compromise or with employees partially successful, these involving 2,391 employees.

Table X gives the list of disputes in existence during the year, with details as to dates, numbers involved, causes, etc. This table

TABLE X.—DETAILED LIST OF STRIKES AND LOCKOUTS IN CANADA, 1925—*Concluded*

Industry or occupation	Locality	Cause or object	Method of settlement	Result	Date of commencement	Date of termination	Number involved		Time loss in working days	Duration in working days
							Employers	Employees		
CONSTRUCTION—*Concluded.*										
Shipbuilding:										
Riveters	Lauzon, Que.	To secure an increase in wages from $2.70 per 100 rivets to $3 per 100 rivets.	Negotiations	Returned on employers' terms.	July 29	Aug. 8	1	252	2,394	9½
Boilermakers, riveters and caulkers.	Vancouver, B.C.	To secure an increase in wages from $4.25 and $4 to $6.50 and $5.50 per day, respectively.	Negotiations	Accepted $6 and $4.50 per day.	June 16	July 9	3	100	1,950	19½
							4	352	4,344	
Miscellaneous construction:										
Labourers (elevator)	Prince Rupert, B.C.	To secure an 8-hour day, double time on Sundays and $5 per day.	Mediation of Deputy Minister of Labour for British Columbia and Fair Wages Officer of the Department of Labour.	Accepted an increase of 7½ cents per hour and time and one-half for overtime, after 8 hours.	Aug. 8	Aug. 12	1	170	510	3
							1	170	510	
TRANSPORTATION AND PUBLIC UTILITIES'—										
Water transportation:										
Seamen (Chinese)	Vancouver, B.C.	To secure customary bonus that had not been paid.	Negotiations	Demands granted..	May 7	May 9	1	35	70	2
Seamen (Chinese)	Victoria, B.C.	To secure an increase in wages.	Replacement of strikers.	In favour of employer.	June 16	June 20	1	24	96	4
Seamen (Chinese)	New Westminster, B.C.	In sympathy with strike in China.	Replacement of strikers.	In favour of employers.	Aug. 20	Aug. 22	1	16	48	3
							3	75	214	
Telegraphs and telephones:										
Telephone operators	Springhill, N.S.	Employee demanded sick benefits to which, it was alleged he was not entitled.	Negotiations	Returned on employers' terms.	June 5	June 10	1	6	21	3½
							1	6	21	
SERVICE'—										
Personal and domestic:										
Cooks and waiters	Winnipeg, Man.	To secure one day off in seven.	Replacement of strikers.	In favour of employers.	Jan. 2	Jan. 3	1	18	18	1
Laundry workers	Ottawa, Ont.	To secure renewal of agreement in effect during 1924.	Negotiations	Demands granted..	Jan. 8	Jan. 10	1	54	108	2
							2	72	126	

(*a*) Strikers replaced but Union still claims strike to be in existence.
(*b*) 75 ceased work April 1, 345 ceased work May 27.
(*c*) Principle referred to arbitration for future disputes.
(*d*) Commission recommended 10 per cent reduction, later accepted.
(*e*) Strikers replaced to a considerable extent from time to time.

does not include the following disputes in which employment conditions were no longer affected but which the unions concerned had not called off: moulders, Galt, Ont., beginning August 2, 1922, not called off at end of 1925; moulders at Guelph, June 2, 1924, not called off at end of 1925, and street railway employees, St. John, N.B., June 29, 1921, which lapsed toward the end of 1925. There was also one dispute in which seven restaurant employees at Port Arthur, Ont., quit work for four hours owing to a disagreement as to the duties of one of the waitresses, causing a time loss of 28 hours or about three working days. It terminated in favour of the employers.

This analysis shows 45 disputes as to wages, of which 20 were due to decreased wages, and 18 of the wage disputes ended in favour of the employers, including 9 due to wage decreases. One strike for shorter hours, one day off in seven for restaurant workers, ended in favour of the employer. Out of the 27 disputes over trade union questions, 16 were to secure or to maintain union wages and working conditions, each dispute involving questions as to increased wages, shorter hours, recognition of union, and working conditions, so that the disputes could not be classified under headings as to wages and hours, union conditions being the matter at issue. Most of these were in clothing manufacturing and ended in favour of the employees.

ANNUAL REPORT OF THE DEPARTMENT OF LABOUR OF CANADA

THE annual report of the Department of Labour of Canada for the fiscal year ending March 31, 1925, was issued during the past month.* The work of the Department is described under ten heads, as follows: 1. Industrial Disputes Investigation Act; 2. Conciliation Work; 3. Fair Wages; 4. Statistics; 5. Labour Gazette; 6. Combines Investigation Act; 7. Employment Offices Co-ordination Act; 8. Technical Education Act; 9. Government Annuities Act; 10. International Labour Organization.

Industrial Disputes Investigation Act

From the inception of the Industrial Disputes Investigation Act on March 31, 1907, down to the close of the fiscal year 1924-25, there were referred under its provisions 638 disputes, in each of which the applicants for a Board of Conciliation and Investigation had stated under oath that a strike or lockout was believed to be imminent and that further negotiations of a direct character were useless. Boards were established in 450 cases. In all but 37 of the cases dealt with, either a direct working agreement was effected or the situation as between the employer and the workers was so modified as to obviate the danger of the threatened strike and no cessation of work occurred.

During 1924-25 nine boards only were established out of 22 cases dealt with under the Act. The number of boards established was the lowest during the life of the statute, the next smallest figure being in 1915-16, a war period.

The report contains tables giving details of all the cases handled during the year. It refers also to the special circumstances surrounding the Act and its administration during the period covered. The uncertainty prevailing during the year as to the outcome of the legal proceedings which had been instituted in August, 1923, by the Toronto Electric Commissioners concerning the constitutionality of the Industrial Disputes Investigation Act, 1907, undoubtedly affected proceedings under the Act generally and the department was handicapped to a certain extent in applying its provisions. The Toronto Electric Commissioners had questioned the right of the Dominion Parliament to enact the statute and the case had been heard by various Ontario courts whose decisions were printed in the report for the fiscal year 1923-24. The result of the litigation was not known until January 20, 1925, when judgment in the matter was delivered by the Judicial Committee of the Privy Council. This judgment,* which declared the Act as it stood to be beyond the competence of the Dominion Parliament, was received with much concern by those in Canada interested in the maintenance of industrial peace and the improvement of relations between employers and employees. The difficulties created by the judgment were, however, overcome by the passage during the 1925 session of Parliament of amendments limiting the application of the Industrial Disputes Investigation Act to matters not within the legislative jurisdiction of any province.† The statute is therefore still applicable to industrial disputes in such enterprises as come clearly within the purview of the Dominion Government.

* Labour Gazette, February, 1925.
† Labour Gazette, July, 1925.

The most difficult situation during the year in connection with proceedings under the Act arose in the case of the dispute in the coal mining fields of Nova Scotia, in which a board was in course of establishment when judgment adverse to the validity of the statute was rendered by the Judicial Committee of the Privy Council. Although the board proceeded to Cape Breton, it was powerless to function save with the joint consent of both parties, and accordingly attempted only a friendly offer of assistance. The miners, however, repudiated the board, refusing to give evidence or enter into negotiations, and the board was compelled to report its inability to take effective action.

Conciliation Work

Apart from the administration of the Industrial Disputes Investigation Act, the services of the Department of Labour were utilized during the year in connection with the adjustment of a number of labour disputes. In connection with some of these disputes application had been made for the establishment of a Board of Conciliation and Investigation, but it was not found necessary to proceed with the establishment of a board since the difficulties were adjusted through the assistance of a conciliator. In other cases in which application was made for the establishment of a board it was found that the dispute did not come within the provisions of the Industrial Disputes Investigation Act and the Department of Labour assisted by the appointment of a conciliator in bringing about an amicable adjustment. In many of the disputes where a settlement was secured by conciliation and no strike took place it was deemed desirable to give the matter as little publicity as possible. As a result the best work of the department achieved in this direction often becomes known only to the chief representatives of the disputants.

Fair Wages

During the year 1924-25 the Department of Labour prepared fair wages conditions in connection with the execution of eighty-five contracts. These were divided among the different departments of the Government as follows: Railways and Canals, 9; Marine and Fisheries, 4; Interior, 1; National Defence, 2; Indian Affairs, 4; Public Works, 65.

Complaint was made to the Department in various instances during the year that contractors for Government works were not complying with the fair wage requirements of their contracts. Most of these complaints related to alleged non-payment of the wages rates contemplated in the contract, the requirement in each case being that the contractor should pay the workpeople the rates of wages current in the district for the various classes of labour employed. In some cases inquiry showed that the claims were not justified; in all instances, however, in which the complaints were well founded action was taken by the Department of Labour to uphold the rights of the workmen concerned.

Statistics

During the year statistics of strikes and lockouts, wages and hours of labour, prices and cost of living, employment and industrial accidents were collected and published regularly in the LABOUR GAZETTE, annual reviews also appearing soon after the close of the calendar year. In accordance with the "Statistics Act, 1918," and under arrangements with the Dominion Statistician, approved by Order in Council dated October 16, 1922, certain classes of these statistics are collected and published in co-operation with the Dominion Statistician, in close association with statistics of general social and economic conditions as organized in the Dominion Bureau of Statistics. The classification of industries and occupations drawn up in the Bureau is followed in the compilation of the statistics of labour.

Publications

The LABOUR GAZETTE was published monthly in English and French during the fiscal year the average monthly paid circulation of the two editions being 7,649, or 6,581 of the English edition and 1,068 of the French. The average monthly distribution of complimentary copies was 3,723 of the English and 667 of the French edition.

Annual reports dealing with (1) Labour Organization, (2) Organization in Industry, Commerce and the Professions, and (3) Labour Legislation in Canada, were published as usual during the year.

The department also issued the seventh and eighth reports in its Wages and Hours of Labour Series, these two reports giving figures as to wages and hours of labour of various classes of trades and occupations in Canada from 1920 to 1924. Three special bulletins dealing with the organization and use of vocational school libraries were prepared by the Technical Education Branch and sent to Canadian schools, and a list of books for use in circulating libraries on vocational education was compiled in co-operation with the provincial officials and distributed to every province.

Combines Investigation Act

The Combines Investigation Act, 1923, which furnishes effective machinery for investigating combines, mergers, trusts and monopolies operating to the detriment of the public interest, became law during the parliamentary session of 1923 and was placed under the Minister of Labour for general administration. Early in 1925 Mr. Lewis Duncan, of Toronto, was appointed a commissioner under the provisions of the act to inquire into a combine alleged to exist among jobbers, brokers and other dealers in fruit and vegetables in British Columbia and elsewhere, resulting in the control of prices to the detriment of producers and consumers. The commissioner conducted a searching inquiry, and his interim report, dated February 18, 1925, disclosed a combine of jobbing and brokerage houses operating against the interests of the Canadian public, "including in that term producer, consumer and trade opposition." The conclusions and recommendations of the commissioner were published in the Labour Gazette for March, 1925. Shortly after the close of the fiscal year the attorneys-general of the provinces affected, namely, British Columbia, Alberta, Saskatchewan and Manitoba, offered to co-operate with the federal authorities in prosecuting those responsible for the unlawful combine.

In October, 1924, a commission was appointed to investigate an alleged combine of retail and wholesale coal dealers and coal mine owners. The commission found that the association in question had not operated to the detriment of or against the best interests of the public.

An investigation was also instituted by the Registrar towards the close of the year into an alleged combine in connection with the marketing of the potato crop of New Brunswick. An interim report of the commission was published in the Labour Gazette for June, 1925 (page 562).

Employment Offices Co-ordination Act

At the close of the fiscal year sixty-five employment offices were operating under the Employment Offices Co-ordination Act. Applications for employment registered at these offices during the year totalled 501,574, and the aggregate number of persons placed in employment was 340,819. While the offices of the Service are located at the points of chief industrial activity, the facilities afforded are not only utilized locally, but each office supplies a considerable number of workers to the contiguous districts. Out of the total of 340,819 placements effected, 168,681 were made outside of the centres in which offices are situated.

Since 1919, the railways have allowed a reduced fare to *bona fide* applicants who desire to travel to distant employment for which no workers are available locally. This privilege is effective on the following railroads: Canadian National, Canadian Pacific, Dominion Atlantic, Kettle Valley, Michigan Central, Pacific Great Eastern, Quebec Central, Temiskaming and Northern Ontario, and the Wabash. The reduced rate is for a second-class fare at a rate of 2.70 cents per mile, obtainable on the surrender of a certificate secured from the Employment Office. A minimum fare of four dollars is stipulated so that a person travelling to employment at a distance where the reduced rate does not amount to the minimum is not able to derive the benefit therefrom. 29,985 persons were by this means aided in securing employment.

During the year a new section was inserted in uniform agreements which were concluded under the Employment Offices Co-ordination Act with all the provinces excepting Prince Edward Island. This section related to disabled war veterans. The specialized work of finding employment for employable handicapped ex-service men whose disabilities were due to war service had been taken over from the Department of Soldiers' Civil Re-establishment during the previous year. This work was covered by supplementary agreements which were, however, signed by five only of the provinces. The federal-provincial agreements for 1924-25 embodied the principle of recognizing the provincial employment offices as the means through which disabled veterans might secure employment. All of the eight co-operating provinces signed the agreement and undertook to make special efforts, through the instrumentality of the existing offices of the Employment Service, to find employment for ex-soldiers.

Technical Education Act

The report states that the Technical Education Act has now been in operation for six years, and, as a result of the liberal assistance rendered by the Dominion Government, every province has taken steps to establish technical or vocational education as a permanent part of the provincial educational system. No two provinces have organized the work along the same lines and there has been a lack of co-operative effort throughout the Dominion, but very satisfactory and encouraging progress has been made despite the great handicaps of scattered population, geographical divisions, and an extended period of industrial depression following the war. It cannot be said that vocational education in Canada is now understood and appreciated by the public or even

by the majority of educational authorities, but, at least, there is a growing demand for this type of education and the results already obtained where the work has been given a fair trial are such that a successful future is assured.

The enrolment and attendance tables, while indicating the extent of the work being carried on and the number of persons affected, do not reflect the real value of the work. They show a continued increase in the number of pupils in day classes, which is very encouraging. During the past six years the enrolment in these clases has increased from 8,512 to 24,137 a growth of 293 per cent. The number of municipalities conducting day classes has increased during the same period from 32 to 65, or 200 per cent. The increase in municipalities conducting evening classes has been approximately 500 per cent, the total now being 156. There has been a growth in correspondence class enrolment of 790 per cent during these six years, and last year 1,638 pupils received instruction through these departments. Teacher-training, although still the most urgent need of vocational education in Canada, has made rapid strides in Ontario, British Columbia and New Brunswick. The establishment of the Teacher-Training College for Technical Teachers was the outstanding development of the year in Ontario, if not in the Dominion. This school, which supplants the summer school training provided during the past four years, provides for a greatly enlarged programme of teacher-training.

Government Annuities

The advertising campaign with respect to Dominion Government annuities which had been maintained with marked success during the second half of the fiscal year 1923-24 was renewed in the fall of 1924. Purchase money for annuities received during the fiscal year ended March 31, 1925, reached the high figure of $1,606,665.03. On March 31, 1925, there were 5,862 annuity contracts in force, and purchase money received from the date of the inception of the Annuities Branch, September 1, 1908, up to and including March 31, 1925, amounted to $9,754,299.42.

An amendment to the Annuities Act of 1908 was enacted at the 1925 session of Parliament reducing the minimum annuity purchasable under the Act from $50 to $10. The main purpose of the amendment was to enable employers to purchase outright annuities of $10 or more as gifts or bonuses for employees who had been with them for many years.

International Labour Organization

The report contains a summary of the work of the International Labour Conference during the year, and of the share taken by the Dominion in this work, Canada having the honour of being one of the eight states of chief industrial importance among the members, and entitled to seats on the Governing Body, or executive of the Conference.

* A general outline of the Department's activities was given in the *Labour Gazette* for April, 1925, page 353.

Co-operators and Labour

The *Canadian Co-operator* in its January issue, states that "owing to certain unfavourable information received by the British Canadian Co-operative Society, Limited, of Sydney Mines and Glace Bay, Nova Scotia, as to the relations between a certain Toronto manufacturing firm and its employees, the Society ceased to purchase from it. As the Society does a retail turnover around one and a half million dollars annually, it is an account worth cultivating by firms engaged in the production of merchandise for consumption, or personal or domestic use. The firm having written the President of the Society challenging the justice of this action, Secretary-Manager Stewart was instructed to write the Co-operative Union for a report thereon, and the general secretary has been making personal investigations in Toronto on the subject.

"Whatever may be the ultimate result thereof, the incident gives an indication of the effective co-operation with organized labour in securing for workers fair treatment which co-operators could give if the working class of Canada were as successfully organized in consumers co-operative societies as those of Europe. Even the 'Open Shop' would not relish the 'Closed Account' of co-operative societies if the factory, farm, mine and lumber workers of Canada were efficiently organized co-operatively as consumers."

An agreement has been concluded between Austria and Germany which places the subjects of each State on an equal footing in either country respecting social insurance. The agreement secures that old age pension and other social advantages acquired by contributory insurance in the one country will be secured to the contributor if he emigrates to the other. The agreement will have to be approved by the Austrian and German Parliaments before ratification.

ANNUAL REPORT OF LABOUR DEPARTMENT OF QUEBEC

THE annual report of the minister of Public Works and Labour of the Province of Quebec for the year ending June 30, 1925, has been issued recently. This Department supervises all proceedings under the Quebec Trades Disputes Act; inspects industrial establishments from the standpoint of the health and safety of the workers; carries out the policy of the Provincial government in requiring the payment of fair wages on government contracts; superintends licensed registry offices for domestic servants; administers the Boiler Inspection Act, and the act respecting the prevention of fires, and supervises the inspection of foundries. Another important duty of the Department is in connection with the issues of educational certificates to children under 16 years of age, such certificates being required under amendments of 1919 to the Industrial Establishments Act before these children may be employed for wages.

The report refers to the careful consideration that is given by the Department to the suggestions made from time to time by labour representatives for better labour conditions. The Department is constantly in communication with employers, one of its main objects being the protection of the worker against the risk of accidents. Legislation having this object in view was the first distinctively labour reform in the Province, having been incorporated in the Quebec Factories Act of 1885. The report counsels caution in regard to the adoption of uniform conventions without reference to the particular conditions prevailing in each country. It refers to the coming amendments to the provincial Workmen's Compensation Act, and to the recent placing in operation of the Women's Minimum Wage Act "which," it adds, "will put us on a par with the other provinces in regard to labour laws."

Three labour disputes in which the registrar of Councils of Conciliations and Arbitration intervened, occurred in the Province during the year. The first was at a shoe factory in Quebec where a strike lasting 23 days affected about 400 workers, with an average loss in wages of over $1,000 a day. The workers went back to work on the employers' conditions. The second was at another shoe factory, where after a suspension of work for two weeks the workers gained their point, being taken back by the employers upon the conditions set by the employees. Only 30 employees were affected by the strike. The third strike occurred in a match factory at Hull, where about 300 workers stopped work because the company wished to replace all forewomen, members of a Catholic syndicate by matrons or nurses. The company finally recognized the claims made by the workers and kept the forewomen in their positions.

Numerous inspections were carried out by the Department during the year. "On the whole," the report states, "our inspectors admit the good-will and zeal with which employers as a rule comply with instructions from the Department. In large industries especially, employers realize more than in the past the necessity for preventing accidents and for securing the comfort of their labourers.

"Formerly we received many complaints about the heating of the workshops, the bad quality of the water, etc., defective lighting, but to-day the law's requirements are often exceeded by certain employers who realize more than ever that money spent to make their workmen's life a pleasant one is a good investment."

All the large department stores in the city of Montreal were visited by the Department's inspectresses who, by strenuous efforts, have secured the adoption of the measures of comfort prescribed by law, particularly the installation of seats behind counters, which is now general.

The number of accidents reported to the Department during the period under review was 1,577 of which number 19 were fatal.

A change was made during the year in the practice of the Department in regard to the inspection of boilers and heating systems. The inspectors formerly collected an inspection fee which went towards defraying their expenses and paying their salaries. This practice raised difficulties for the inspectors, and the owners are now required to pay the fees direct to the Department.

In regard to the licensing of stationary engineers and firemen the report states that the Branch created for the examination of engineers and boiler firemen in 1910, is now firmly established; "Workmen of this category would not go back to the old system," it is stated. "With his diploma the engineer goes to an employer knowing what wage to expect, for the act basing the diplomas on the importance and force of the power engines entrusted to engineers, fixed a durable arrangement, from which employers do not attempt to escape. We also find that engineers study much more

than formerly, and promotions are the order of the day, as the figures submitted by the examiners show."

Electricians also are now required to have diplomas before they can undertake renewal work or new installations in the building coming under the act, and as all the plans and specifications for new installations have to be submitted to the branch, either in Montreal or Quebec, the danger of fire is almost completely eliminated. "There is always the danger of imprudence and as ever the human factor may upset the best precautions" the report says. "For that reason inspectors must be vigilant and at the same time become instructors."

The work in connection with the registration of children was steadily carried on during the year. At Montreal 3,528 children were entered, an increase of 751 over the previous year, the total number registered since the coming into force of the act in March, 1920, to June 30. 1925, being 22,540. In the Quebec division 450 age and study certificates were issued 324 of these being in Quebec and 126 in Three Rivers. Twelve certificates were refused, as the applicants were not old enough. With few exceptions, it is stated these young people could read and write fluently, some in both English and French.

In connection with the Provincial Employment Bureaux it is stated that a permanent service for inducing employers to make use of the Bureaux is to be organized during the present season, but an increasing use is made of them already both by employers and workpeople. The number placed by the five bureaux in the Province was 16,452. Two have increased their operations, Sherbrooke and Hull. There was a slight decrease at Three Rivers in number of persons placed. In Montreal and Quebec there was also a slight decrease. In both bureaux there was a decrease in the number of men placed and an increase in that of women. The latter in Montreal amounted to 805. Of the industries engaging men through the bureaux, building requires the most. Afterwards come lumbering, farming, factories and railways. The demand for hotel employees, to meet requirements of tourist travel was normal. The reports of Provincial Employment Bureaux show a marked improvement in the industrial situation, the only exception being lumbering. Forest operations diminished considerably, owing to the depression in the lumber market. Many choppers had to look for other work and somewhat crowded the labour market in Montreal. The restricted number of manual building workmen placed by the Montreal bureau is due to this cause. Another cause was the introduction of machinery, such as mechanical shovels used for excavating for foundations.

Ten licenses were granted during the year for registry offices at Montreal, and two at Hull. The report stated that "in spite of the wish of many people to do away with licensed registry offices, it would not be easy to abolish them suddenly, without being prepared to extend the Provincial Bureau, and assume responsibility for the placing of the numerous foreigners, Italians, Poles. Roumanians, who, once here, elect domicile in the city of Montreal while awaiting employment outside of the Province. Besides the expense of renting offices, cost of interpreters and an increased staff, we would have to depend also on the good-will of contractors."

Ford Motor Company's Profit Sharing Plan

The Ford Motor Company resumed on February 1 the practice of issuing profit sharing certificates to employees, the issuance of such certificates having been temporarily discontinued last April, when a $25,000,000 quota was reached.

The plan under which employees receive, each six months, a share of the profits they help to make, originated in January, 1920. It was announced at that time that when the men in the shops were given their pay envelopes they would be allowed to deposit with the company any amount of money that did not exceed one-third of their wages. The company's banks, which were installed in the shops, were to hold the money until $100 had been paid in. For each $100 a certificate guaranteeing the men at least six per cent on their investment was issued.

The only change in the original plan to take place on February 1, was that employees were not to be allowed to devote more than one-fourth of their pay to the purchase of certificates.

Thirty-five thousand Ford employees were holders of the certificates prior to February 1, and a large number of requests have been made for enrolment since that date. Although the company does not promise more than six per cent interest, the rate of interest actually paid has always ranged from 14 to 16 per cent yearly.

The Prince Rupert Fishermen's Co-operative Association has been incorporated under the Co-operative Associations Act of British Columbia.

LABOUR LEGISLATION IN SASKATCHEWAN AT RECENT SESSION

THE first session of the Sixth Legislature of the Province of Saskatchewan opened on December 3, 1925, and concluded on January 28, 1926. Among the measures enacted was an act to validate the Dominion Industrial Disputes Investigation Act, 1907, in regard to disputes that would otherwise lie within the exclusive jurisdiction of the Province. This Act is identical with the act passed at the recent session of the legislature of British Columbia (Labour Gazette, January, 1925, page 17). The act, as stated in the preamble reprinted below, implements the Dominion Act as amended by Parliament last year, as far as the Province of Saskatchewan is concerned. Confirmation of the Dominion legislation has now been given by the two provinces in which legislative sessions have since been held. The Labour Gazette has detailed in previous issues the circumstances which led to the amendment of the Industrial Disputes Investigation Act, including the judgment of the Judicial Committee of the Privy Council in reference to the validity of certain sections which dealt with matters coming properly within provincial jurisdiction.

An Act respecting the Investigation of Industrial Disputes within the Province

Whereas the provisions of The Industrial Disputes Investigation Act, 1907, chapter 20 of the Acts of the Parliament of Canada, 1907, do not apply to industrial disputes which are within the exclusive legislative jurisdiction of any Province of Canada; and

Whereas it was enacted by chapter 14 of the Acts of the Parliament of Canada, 1925, entitled An Act to amend The Industrial Disputes Investigation Act, 1907, that the said Act shall apply to, among other things, "any dispute which is within the exclusive legislative jurisdiction of any province and which by the legislation of the province is made subject to the provisions of this Act"; and

Whereas it is deemed expedient, in view of the amendment recited above, that the provisions of the said Act, with amendments, shall be made to apply to industrial disputes of the nature defined in the said Act which are within the exclusive legislative jurisdiction of the province:

Therefore, His Majesty, by and with the advice and consent of the Legislative Assembly of Saskatchewan, enacts as follows:—

1. This Act may be cited as The Industrial Disputes Investigation Act (Saskatchewan), 1926.

2. The provisions of The Industrial Disputes Investigation Act, 1907, chapter 20 of the Acts of the Parliament of Canada, 1907, and amendments thereto, shall apply to every industrial dispute of the nature therein defined which is within or subject to the exclusive legislative jurisdiction of the province.

3. The Lieutenant-Governor may, by proclamation, apply the provisions of any amendment to the said Act which may hereafter be enacted by the Parliament of Canada to every industrial dispute of the nature in said Act defined which is within or subject to the exclusive legislative jurisdiction of the province, whereupon those provisions shall apply accordingly.

Minimum Wage Act.—Amendments to this Act, to take effect on May 1 next, simplify the existing law in cases where employees are paying their female employees wages below the minimum rates required for their class. Section 10 of the act formerly provided that the employee in such a case has the right of recovery in civil action for the full amount of the wage, less the amount actually paid, and that no agreement entered into between the parties binding the employee to work for less than the required minimum rate shall be valid as a defence in such action. The section as now amended simply declares that "no agreement made by an employee to work for less than the minimum wage fixed under the provisions of the act shall be valid."

The penalty section of the act was amended by a reduction in the maximum term of imprisonment in cases where fines are not paid, from three months to one month. A new subsection was added to the same section as follows:—

(2) If the offence for which an employer is convicted is the payment of wages at a rate lower than the minimum wage fixed by the board, the convicting magistrate shall order him to pay to the employee concerned the difference between the sum actually paid such employee and that to which the employee is entitled; and in default of paying such amount in addition to any fine that may be imposed the offender shall be liable to imprisonment for a term not less than twenty days nor more than three months.

Female Employment Act.—This act, which was amended in 1918, provided that all persons wishing to employ white female labour in connection with the operation of a hotel, restaurant, boarding house, etc., must first obtain a municipal license, was amended by omitting the word "white," thus making it applicable to all female labour generally in these occupations. Municipal councils were given absolute discretion in regard to the issue of such licenses, their action not being "open to question or review by any court."*

Mechanics' Lien Act.—A new subsection was added to the section of this act which defined the period within which a registered lien expires. This provides for the registration in court of the discontinuance of an action, or of a formal notification that proceedings have terminated, such registration having the same effect as a formal discharge by the plaintiff. The section of the act which states the mode in which liens are to be realized was also amended to provide for the transfer of the records, if necessary, from one judicial district to another.

*Labour Gazette, January, 1926 (Yee Clun versus City of Regina).

Attachment of Debts Act.—This Act was amended to make more clear the order of procedure in the issue of a garnishee summons subsequent to a judgment; such summonses are to state the amount remaining due and unsatisfied under the judgment in addition to the information previously required. Another amendment related to garnishee proceedings with regard to wages due to provincial employees, this class being stated to include "any member of the civil service or any person temporarily employed by it (the Government) within the meaning of the Civil Service Act for wages or at a salary and not employed by the day."

Hawkers and Pedlars Act.—The Hawkers and Pedlars Act was amended after evidence had been heard by the legislative committee on municipal law. The retail merchants had asked for an increased license fee for hawkers and pedlars and for more drastic penalties for infringement of the act, while the "direct sellers" asked that the provincial license fee should be $10 instead of $100 as at present, and that municipal licenses should be limited to $25 in cities, $10 in towns and $5 in villages. The act was amended so as to include in the definition of pedlars persons who solicit orders for future delivery, and by adding to the list of persons exempt from inclusion in this category those who deal in binder-twine, adding machines and sewing machines or parts thereof.

Steam Boiler Act.—The fees payable for the inspection of steam boilers are after May 1, 1926, to be fixed by order-in-council, instead of being distinctly stated in the act, as at present. The standard rating of boilers was fixed by another amendment at one horse-power for each ten square feet of heating surface (formerly the rates varied for the various classes of boiler). The section requiring the use of spark arresters of specified type in connection with threshing engines was changed so as to require generally that such devices be "efficient."

Public Officials Security Act.—Under this act officials in provincial employment were formerly permitted to furnish an individual bond. This provision was amended so as to bring the act into line with existing business practice by requiring that bonds are henceforth to be accepted only from properly authorized banking companies. Provision was also made for "blanket bonds" covering groups of public employees.

Vocational Education Act.—The conditions of admission to day schools were altered by an additional provision that applicants for commercial courses must hold Grade VIII diplomas or standing equivalent thereto. Grade VI remains the general standard for admission to day schools, the minimum age remaining at fourteen.

Secondary Education Act.—This act was amended by abolishing the payment of provincial grants for the tuition in high schools and collegiates of non-resident pupils, and substituting a system of fees, collectible from either resident or non-resident pupils. The Minister of Education stated that the object of the amendment was to further extend the policy of bringing the facilities for secondary education as near to the home of every student as may be possible, and to keep the elementary school constantly in view as being of primary importance.

Premier Dunning said the Government had endeavoured to meet the problem created by the growth of secondary education in the larger centres in recent years. Representations had been made that on account of the large number of non-residents coming into the cities for secondary education an impossible burden was being placed on the ratepayers in the cities. More pupils were now receiving secondary education in over 350 continuation schools than in the regular high schools.

Co-operative Marketing Associations Act.—This Act enables non-profit co-operative marketing associations to register without special legislation.

Civil Service Superannuation.—The Legislature unanimously adopted a resolution that "the Government should give early consideration to, and devise, a superannuation scheme applicable to all branches of the Public Civil Service." It was suggested that government employees should contribute four per cent of their monthly salaries, the Government guaranteeing to pay pensions out of provincial consolidated revenues. Males would be retired compulsorily at the age of 65 and women at the age of 60, the lieutenant-governor-in-council having power, in exceptional cases, to allow men and women to continue in the service for an additional five years over the age limit. Only employees who had been in the civil service for ten years or more would be eligible for superannuation. The resolution carried.

Agricultural Research Foundation.—Saskatchewan Agricultural Foundation was established by a special act, the funds to be supplied from the payment to the province of the $284,200 surplus on operations of the Canada war-time wheat board. Interest on the principal sum will be utilized to defray

expenses of the Foundation which is designed to deal with the following subjects:—scientific research of plant and animal diseases and soil problems; investigation of agricultural marketing; to provide scholarships for promising students from Saskatchewan to the College of Agriculture and for graduates of the agricultural college.

Alberta Manufacturers Criticise Compensation Act

The Alberta Branch of the Canadian Manufacturers' Association waited on the Provincial Cabinet and the Workmen's Compensation Board in January with a proposal that the whole act be reviewed at the forthcoming session of the legislature and that the following revision be made:—

(1) Present scale of compensation of 62½ per cent be reduced to 55 per cent.

(2) Maximum of compensation which can be paid to any workman in Alberta be fixed at $10,000, such maximum to be made effective from January 1 last.

(3) That the maximum payment to which an injured person is entitled under the Act be reduced from $1,140 per annum to $1,100 per annum.

(4) That agriculture be brought under the provisions of the Act, thus including farm labourers in the list of workmen covered.

In the interview with the Board the delegation claimed that the existing assessment rates were excessive, in view of the fact that nine classes showed large surpluses. They proposed that employers should be given the option of paying assessments in a lump sum, half-yearly or quarterly as desired.

The manufacturers of Alberta, it was stated, "are thoroughly in accord with the principle of compensation for injuries received by workmen in the course of their employment, and have every confidence in the Workmen's Compensation board. But increases in compensation within the last six years have led to the belief that the government is obliged to provide maintenance for disabled workmen instead of assistance, the delegation feared, and therefore changes should be made."

Workmen's Compensation in Manitoba

The Workmen's Compensation Board of Manitoba recently transferred the operations of the Government Liquor Control Commission from Class G under section 55 of the Act to Class D. The industries of the province are by section 55 divided into seven classes for the purpose of assessment for the Accident Fund. These classes are as follows:—Class A—The Canadian Pacific Railway company and its subsidiary companies; Class B—The Grand Trunk Pacific Railway company and its subsidiary companies; Class C—The Canadian National Railway company; Class D—The Crown in the right of the Province of Manitoba; Class E—The City of Winnipeg; Class F—All other municipalities in Manitoba; Class G—All industries set out in schedule I hereto and not included in the above classes.

Proposal to Stabilize Employment on Railways

The Committee on Economics of Railway Labour of the American Railway Engineering Association, of which Mr. C. C. Cook of the Baltimore & Ohio Railroad is chairman, has recommended that railroad managements provide every means possible for the education of employees, particularly those in a supervisory capacity. Where the roads are of sufficient size, the Committee suggests that a personnel department be established to handle work of this character. On smaller roads, it was added, the work should be assigned to some officer of the organization.

Other suggestions were: The extension of benefit associations providing insurance against sickness, superannuation and death, placing of a savings and a loan fund at the disposal of employees as an added incentive of merit.

"The proposal to stabilize maintenance of labour," says Mr. Cook," so that employment throughout the year will be assured is one that promises immediate and beneficial results."

The United States Bureau of Mines, in a recent report, states that 140,000 mine workers have now been trained in mine rescue and first-aid methods. The main purpose of the bureau's recently organized safety extension service will be to give advanced training in rescue work and bring to the attention of mine officials the latest advances made in the prevention of mine flares and explosions and in the conduct of rescue operation and disasters. The investigation into the explosibility of the dusts of different coals is being continued. The manner in which an explosion traverses mine workings and the ways in which mine gases and dusts may be ignited are also being studied.

TRADES AND LABOUR CONGRESS OF CANADA

Proposed Labour Legislation for Ontario

THE Trades and Labour Congress of Canada, through its Ontario Executive Committee and the invited representatives of the international trade union movement, laid before the Provincial Government on February 2 a programme of legislation desired by labour in the Province. The delegation included in addition to officers of the Trade and Labour Congress representatives of the international organization of sheet metal workers, electricians, machinists, plumbers and steamfitters, painters and decorators, journeymen tailors, brewery and soft drink workers, barbers, plasterers, carpenters and joiners, firefighters, blacksmiths, printers, boot and shoe workers, also representatives of the Workers' Educational Association and others.

Canada and the International Conventions.—The delegation asked for definite action to give effect to such decisions of the six annual conferences of the international labour organization as had been considered to come within provincial jurisdiction, particularly:

(*a*) Enactment of an eight-hour-day law for industrial and commercial undertakings.

(*b*) Further protection of women and children in industrial and commercial undertakings and agriculture.

(*c*) Co-operation with other provinces so as to make possible ratification, by Canada, of these draft conventions and recommendations.

(*d*) Bringing of all young persons, irrespective of sex, under the Minimum Wage Act.

"With reference to the foregoing request," it was stated, "we desire the co-operation of the Ontario Legislature to the extent that where existing legislation is in the main, or in its entirety, in harmony with the decisions of the International Labour Organization, such action be taken as to make complete ratification of these decisions by the Federal Government. In some of the Provinces this action has been taken and ratification of these decisions has taken place. In this way Canada will receive such credit as she is entitled to for ratification of the decisions of the International Labour Organization."

Mothers' Allowance Changes—Amendments to the Mothers' Allowances Act were suggested, as follows:—

Inclusion of mothers with one child.

Continuance of the allowance, in needy cases, after the oldest child reaches the age of 16 years.

Allowances to mothers who have been deserted for three years.

Raising of the property qualification limit from $2,500 to $5,000.

Totally incapacitated husbands to be considered in the same class as children and the same allowance to be made for them.

A flat rate of allowances for the entire province, on the ground that the higher allowances now paid in the larger cities lead many mothers to remove their homes from smaller centres.

Administration of the act "in a more just and sympathetic manner."

Rest Periods.—The delegation, in accordance with a recent resolution of the Congress, requested the government to enact legislation to compel all employers of labour to give all employees at least two weeks' holidays with full pay each year, ten months or more employment to entitle all employees to the benefits of such an act.

Manufacture in Homes.—The prohibition of the manufacture of clothing in the homes of wage earners was proposed, the delegation stating that "homework promotes the contract and sweating system and is a menace to improved shop and factory conditions, interferes with family life and is not essential to the industry. Exceptions, however, might be made for the convenience of crippled workers, widows with children to care for, or cases of like nature, for whom exemption might be made on application to the Department of Health and Labour."

One Day Rest in Seven.—The delegates asked for legislation providing one day's rest in seven for employees of various industries, pointing out that such legislation had been enacted in 1920 in regard to firemen. In regard to firemen they suggested:—Legislation giving the fire department right of way over all other traffic when responding to an alarm.

Uniform pension systems for all firemen, to which the firemen and the municipality would contribute equally.

Extension of the two platoon system to all paid permanent fire departments, where it applies now only in cities of 10,000 or more population.

Protection of Electrical Linemen.—The Government was asked to consider whether regulations might not be devised to govern linemen and other electrical workers so as to create safer conditions of work.

"We are convinced that a system of regulations could be instituted, and because of these regulations, accidents could be reduced to a

minimum. This has been true in Alberta, where a system of regulations was instituted some years ago. These regulations could be adopted and put into practical effect without great expense to the distributing companies. Electrical transmission equipment has a certain length of life beyond which time it is of little value and must be replaced. If all new construction and all replacements were made according to proper safety rules, little or no extra expenditure would be experienced."

Conditions under public Contracts.—The delegates asked for the strengthening of the province's fair wage laws, "which in the past have proven totally inadequate and have failed absolutely to protect the workers against the avaricious encroachments of the unfair employer." Recognition and enforcement of the eight-hour day principle in all construction work undertaken by the government.

Greater uniformity of building regulations, giving municipalities power to make their by-laws more stringent if they desire, but not allowing them to relax their provisions.

Workmen's Compensation.—The amendment of the act was suggested so that it might include within its scope all workmen instead of being limited to those of specified classes.

Paint Spraying Machines.—It was pointed out that the spray painter is subject to very different conditions of employment than the man who works with the brush because of the greater quantity of material used in a given time and an entire absence of protective legislation to protect his health.

The Government was therefore asked to make every effort to have the spraying cabinets given more rigid inspections and that the question of prohibiting the use of the spraying machine, unless efficient ventilation can be provided, be very seriously considered, and further that the compressed air tanks attached to the portable outfits be given periodical inspections.

Other Proposals.—Protection of bona-fide technical schools from "a competition, which is neither desirable nor necessary—that of so-called trade schools."

Abolition of military training in the schools.

Unemployment insurance, on which "the federal government has denied its responsibility."

Licensing of barbers and enforcement of proper sanitary standards in all barber shops.

Inclusion of all pressure vessels, whether for steam, oil, air, gas or water, under the Steam Boiler Act, "this being necessary for the protection of life, limb and property."

Safe and proper installation of all plumbing conveniences.

Numerous amendments to the minimum Wage and Factory Acts, including a working week of 44 hours, and a maximum of 54½ hours, including overtime, and the keeping of duplicate record and production cards in the case of all female employees, to avert future cases such as were investigated by the minimum wage board a year ago.

Recommending that the government adopt a measure by which beers and wines could be sold in licensed places for beverage purposes, and spirituous liquors procured from government stores under proper regulations.

Supplementary Proposals

Other requests submitted included:

Immigration.—(a) All placements of immigrants to be made through the provincial government employment service. (b) Canadian citizens be given equal opportunity in any provincial colonization scheme.

Elections.—(a) Proportional representation; (b) Election day a public holiday; (c) One man, one vote; (d) Abolition of property qualifications for voting on money by-laws; (e) Full political rights to public employees.

Stationary and Hoisting Engineers' Act.—Appointment of more inspectors, and that section of the act dealing with the registration of steam plant owners be enforced as a means of revenue for the department and a check on the operators of said plants.

Factory Act.—That the government of Ontario appoint enough inspectors so that the factory act can be properly enforced in the planing mills, woodworking plants, and various other factories.

Juvenile Employment.—The government and school authorities to provide for the appointment of vocational officers whose duties shall be in collaboration with junior divisions, officers of the employment service of Canada, to furnish the fullest possible vocational guidance to those leaving school to become wage earners.

Government encouragement for co-operation; enforcement of Building Trades Protection Act, etc.

Compulsory imprint of name of publishing house on all printing for public circulation.

Quebec Provincial Executive

Early in the session of the Legislature of the Province of Quebec which opened on January 7, the Quebec Executive of the Trades and Labour Congress of Canada, presented to the Provincial Government, their proposals in regard to labour legislation, as follows:—

In the matter of Workmen's Compensation, the delegation asked that the Legislature give

full effect to the recommendations made by labour representatives on the Commission which was established to study this subject, (LABOUR GAZETTE, February, 1925, page 150), and to the pronouncements of the International Labour Conference of Geneva; legislation in accordance with the International Labour Conference decisions regarding the eight-hour day; and co-operation with the other provinces with a view to obtaining ratification, by the Dominion, of other conventions and recommendations; that the custom of having Quebec officially represented at the annual meetings of the International Labour Conference be continued; legislation following the decisions of the International Labour Conference where such matters are within the jurisdiction of the Provincial Legislature; inclusion of a fair wage scale in Government contracts or contracts subsidized by them; abolition of private employment service bureaux; allowances to mothers of needy families; and a greater measure of protection for women and children in industry; more effective protection of the right of association; measures of industrial hygiene; books of Canadian authors to be printed in Canada; regulation and examination of moving picture machine operators.

Educational measures proposed by the delegation included free school instruction and compulsory attendance compulsory and uniform instruction in French and English in all schools of the province; issue of all text books by Government upon the recommendation of School Boards and their sale at cost price to pupils; uniformity of school books in the province; free instruction in all Provincial Government schools, terminal and otherwise; permission to teach to be given only to persons possessing a normal school diploma, save in primary courses of instructions given in kindergarten and similar institutions, and in technical courses; compulsory attendance at night schools for all persons under the age of 21 years who cannot read or write one of the two official languages of the province; amendment of the education law to fix a minimum salary for teachers in accordance with the cost of living and to permit suing of school commissions who do not pay this minimum salary; development of free professional instructions:

The delegation further asked for the following measures relating to industrial hygiene, examination of barbers, and sanitary inspection of barbers' and hairdressing establishments; protection of painters against the dangers from the vapours to which they are exposed in the use of such materials in paints as lead; amendments of the law concerning scaffolding so that its application may extend to the entire province; that inspection be made by the Provincial Department of Labour in all centres where inspectors have not been named for this purpose; and that scaffolding carry the certificate that is required by law.

Another delegation from the same organization, later in the month, suggested to the government that a special class of inspectors should be appointed for the inspection of scaffolds, particularly where they were used for the construction of steel and concrete buildings. They pointed out that whereas ordinary scaffolding might be satisfactory when buildings were being constructed of brick and small stone, when heavier material such as large blocks of concrete were used more substantial scaffolding was required.

The same delegation asked that the staff of the provincial fair wage officers be increased so that they could be in closer relations with the various unions.

Alberta Federation of Labour

A delegation from the Alberta Federation of Labour waited on the Government at Edmonton in January to present their proposals in view of the approaching session of the Provincial Legislature. The legislation proposed by the delegation would include the following measures:—

An eight-hour day act;

Health and unemployment insurance;

Distribution of school books and supplies through the Government to school districts;

Old age pensions;

A Provincial Industrial Disputes Act;

Changes in the Workmen's Compensation Act, including provision for appeal against the board's decisions, and for

A Medical aid scheme which would ensure adequate medical attention to all the people, to be financed by assessments;

Revision of the Factories' Act, and the Mechanics' Lien Act.

A student's employment bureau has been organized at McGill University, Montreal, for the purpose of securing permanent and temporary part-time jobs for students, and permanent positions for graduates.

The Montreal Trades and Labour Council recently asked the Government of Quebec for legislation providing that witnesses attending courts of law be paid reasonable fees. It was suggested that a witness should be paid the amount of wages he might have earned during the time spent in court.

NOTES ON LABOUR UNION ACTIVITIES

Convention of District 26, United Mine Workers of America

THE annual convention of District 26, United Mine Workers of America, opened at Sydney, Nova Scotia, on January 26. Usually this convention is held in November, but on this occasion it was postponed until the Provincial Royal Commission on Coal Mining Industry in Nova Scotia had concluded its mission and delivered its report. The Commission's report was made public on January 11, and was reprinted as a supplement to the last issue of the LABOUR GAZETTE.

District President J. W. McLeod, presided over the convention. A motion was adopted to admit the press under a mild censorship restriction, but admission was refused to Tim Buck, representing *The Worker* (Toronto) and to J. B. McLachlan, editor of *The Maritime Labour Herald*. Another motion excluded all but delegates and *bona fide* members of the U.M.W., from the convention hall. This motion was directed at several protagonists of the One Big Union, who had taken seats in the rear of the building and resulted in their having to leave. One of these was James Myer of Winnipeg, general organizer of the O.B.U.

The president, in his opening address, detailed the conditions prevailing in the district, emphasizing the importance of the investigation by the Royal Commission and stating that the full time of the executive officers during November and December had been occupied with this investigation. The district executive board he said, had given the contents of the Royal Commission's report as much study as was possible in the short time since it had been made public and considered that it should be made the basis of a long term agreement with the company.

The Committee on Officers' Reports, to which the president's address was referred, brought in a recommendation favouring its adoption, making special mention of the recommendation for a long term agreement. The committee's recommendation was passed unanimously by the delegates.

At this point Tim Buck, representing the *Worker* (Toronto) was given an opportunity to address the convention on the "Naturalization of Industry."

The special Redistribution Committee in its report recommended that the constitution be changed as follows:—

(1) To reduce the number of sub-district board members from six to three. (2) To reduce the number of sub-districts from six to three as follows: No. 1 to consist of 11 locals in and around Glace Bay as at present. No. 2 to combine the former sub-districts of New Brunswick, Cumberland and Pictou counties; No. 3 to combine the former sub-districts of Inverness, Sydney Mines and New Waterford. (3) To provide that the vice-president shall in future reside and conduct an office in New Glasgow. (4) To provide that the three board members shall work on salary, instead of day rates and that the salaries of all district officers and board members shall be subject to the rise and fall of miners' wages since 1924. (The 1924 rates for officers are: President, $200 a month; Vice-President, $185 a month; Secretary-Treasurer, $200 a month; and board members, $175 each. The new rate, if adopted, will be approximately ten per cent off these figures.

During the debate on this report, President McLeod declared that the convention had met to consider a matter of vital interest to the organization, namely, the new contract, and he felt that if this feature was successfully grappled with the board member matter would adjust itself. Subsequently, on the suggestion of the officers themselves, the district convention voted to reduce the salaries of the executive by an amount proportionate with the reduction which the miners finally receive when negotiations for the new scale are completed. It was expected that this would be about a ten per cent reduction on the 1924 scale. The convention also decided to have the vice-president reside, in future, at New Glasgow, but voted down a proposal to reduce the number of board members from six to three. In addition it was decided to pay board members at the straight rate of $7.90 a day for such actual time as they spend in district business.

The report of the Policy Committee was the chief feature of the convention, and was thoroughly debated by the delegates. In its amended form, this report was finally adopted as follows:—

That report of the Duncan Royal Commission be the basis on which the district executive will carry on negotiations with the British Empire Steel Corporation with respect to the new wage agreement (subject to the following suggestion from the policy committee and endorsed by the convention: That such contract shall be for a period of two years, beginning February 7, 1926, and ending February 6, 1928).

That the eight-hour day from bank to bank obtain in all collieries.

That clause (4) of the old agreement be deleted, and article 18 of the district constitution be substituted. (This deals with the question of grievances).

That clauses nine and ten of old agreement be deleted. (Under these clauses, a miner lost his working place in the mine, if he was absent from work for three days for any other reason than sickness; or if, because a grievance had not been adjusted, he quit work).

That clause 12 of the old agreement, which deals with loss of time and money by the miner as result of "falls," be amended to the extent that the miner

be paid 56 cents per hour while "falls" are being cleared.

Maintenance men will not be withdrawn, the clause in the old agreement regarding maintenance men to be amended, to the effect that the company will not have the power of selection, and that regular maintenance men only will be employed at this work.

That no clause in the agreement shall be in conflict with the district constitution.

That employees will be supplied with run of mine coal at $3 per ton at the mine, or nearest coal yard.

Where the "Long Wall" system is being put into practice, throughout the district, that a day rate of six dollars per day be paid to all men loading and cutting coal until a tonnage rate is agreed upon by the mine committee and executive officers. That where tonnage rate is in operation this clause be added to the contract.

Where pans are more than ten feet from the coal face and coal requires to be shovelled out, we recommend that five cents per ton be added to the tonnage rate for that day's operation.

All local contracts to be embodied in the general agreement, and to be negotiated at the general conference unless otherwise agreed upon by the executive.

That overtime be abolished wherever possible, but where it cannot be avoided, that time and one-half be paid, with double time for Sundays and holidays.

That no lamps be taken from the lamp house earlier than one hour before the commencement of each shift.

That "trouble coal" at all mines be paid for at the rate of $2 per cubic yard, measurement to include coal on each side of trouble. When place is half stone, or "trouble," miners are to paid six dollars.

That the policy of this district shall be directed towards the ultimate nationalization of the mines, with compensation to the present owners to the extent of the value of their operating plant and equipment, said value to be decided by arbitration.

In addition to the above adopted clauses, it was decided to leave the check-off question entirely in the hands of the executive who are to negotiate for its inclusion in the new contract.

While this report was adopted as outlined above, there was a lengthy discussion over the first clause regarding the wage scale. Originally the committee had recommended that the miners' leaders should fight for a wage scale at least equal to the present (1922) rate, and in the event of failure, that no contract be signed with the corporation, but the union left free to take action at any time. During the discussion on this clause, president McLeod read a letter from International president, John L. Lewis, in which Mr. Lewis stated that in his opinion, after a perusal of the Duncan report, and the information supplied him as to the character of the Royal Commission's investigation of the industry, it was "the course of judgment to make a long term contract on the basis of the report." This course should be taken, the letter stated in effect, in order to stabilize the industry and give the members a chance to rehabilitate the union.

The Constitutional Committee recommended that the term of office be extended to two years instead of one, which is in accordance with the constitution. An amendment was moved calling for a one year term, and this was finally adopted. The present executive will continue in office until August, 1926, and the next convention will be held at New Glasgow in June, 1927.

Among the resolutions adopted by the convention, were the following:—

(1) Asking that the workmen's compensation act be amended to provide for an increase in the weekly compensation payments and that the minmum be fixed at $12 per week. The increase to be taken from the reserve funds.

(2) Requesting that the free treatment period be extended to thirty days and that the compensation board pay for all surgical operations resulting from accidental injuries.

(3) Endorsation of the Canadian Workers' Defense League.

(4) Making the transportation expenses of the delegates a district charge.

(5) Urging the international authorities of the U.M.W. to restore the membership rights of the former district executive officers who were deposed by the International president at the time of the 1923 strike.

(6) Instructing the executive to take up with the International the question of obtaining separate locals for surface workers.

(7) Requesting the company to "bank" at Sydney Mines a portion of the winter coal orders recently announced.

Canadian Brotherhood of Railroad Employees Opens Door to Railway Shopmen

IN the LABOUR GAZETTE for last month, reference was made to the issuance of a charter by the Canadian Brotherhood of Railroad Employees to seceders from the International Brotherhood of Boilermakers, Iron Shipbuilders and Helpers. The Canadian Brotherhood is now definitely in the field to accept into membership all classes of railway shopmen in Canada as indicated by the following letter issued to all local divisions of the C. B. of R. E. by Mr. A. R. Mosher, the president:—

DEAR BROTHERS,—Our Brotherhood has always been in favour of one organization for all railway employees in Canada believing that such an organization would be able to accomplish a great deal more than the present form of craft organization. In the past, however, it has not been the policy of our Brotherhood to accept into membership such employees as were represented by the older established craft organizations, preferring rather to achieve amalgamation by mutual consent of all the organizations. An understanding moreover was reached several years ago between the representatives of the Shop Crafts Organizations and our Brotherhood whereby it was mutually agreed that each organization would refrain from interfering with the membership of the other.

Recently, however, without notice to us these Shop Crafts Organizations undertook to assist, and are now actively assisting, the Brotherhood of Stationary Firemen and Oilers in an attempt to disrupt our membership amongst shop labourers. Needless to say they are making no progress, as our membership pretty gener-

ally recognizes the fact that we have been able to accomplish more for them than any other organization has accomplished for the same class of railway employees and they are, therefore, not likely to pay much attention to those who are now seeking to destroy their effectiveness by dividing their forces. As a result of this action on the part of Shop Crafts Organizations we are justified in changing our policy and accepting into membership the skilled as well as the unskilled railway shop men in this country.

Simultaneously with this breach of confidence on the part of the Shop Crafts Organizations a large number of Boiler Makers and Helpers employed on the railways in Canada decided to sever their connection with their International Organization on account of an arbitrary condition imposed upon them by that organization at a recent convention, which like most of the so-called International Organizations operating in this country, was dominated by the United States membership. Approximately 400 Boiler Makers and Helpers employed by the Canadian National and the Canadian Pacific Railways, who had definitely decided to sever their connection with the International Organization, without any encouragement from us, made application for membership in our Brotherhood. Taking into consideration the entire situation these applicants were granted a charter and we are now definitely in the field to accept into our Brotherhood all Railway Shopmen in Canada both skilled and unskilled. Reliable information which we have received indicates that at many points from 75 per cent to 90 per cent of the Boiler Makers and Helpers are severing their connection with the International Organization and are making application for membership in our Brotherhood.

Our membership is requested to make known the facts as herein stated and to assist in every way possible to bring Boiler Makers and Helpers in the various railway shops into our organization.

Officers of the International Brotherhood of Boiler Makers, Iron Ship Builders and Helpers and representatives of other Shop Crafts Organizations, are seeking to change the strong and even increasing sentiment in this country in favour of one Canadian Organization for railway workers by broadcasting grossly misleading and exaggerated statements. Among other equally wild and untruthful statements they are saying that the railway managements will not recognize any organization except those affiliated with Division No. 4 Railway Department of the A. F. of L. and that only a very small number of Boiler Makers and Helpers, led by communists, are severing their connection with the International. Having a poor case they adopt the policy of misrepresentation, slander and abuse, and of course the C.B.R.E. will not be overlooked in their campaign. But we have survived similar attacks in the past and will do so again.

Knowing the staunchness and loyalty of our own membership it is scarcely necessary for me to warn them against the unscrupuplous tactics that may be employed to hurt us, but it is desirable that they know the true situation and that they pass the facts along to the Boiler Makers and other interested workers Don't let anyone be fooled by those whose main object is self-preservation rather than the welfare of the workers and who will not hesitate to use deception to gain their end.

It is an insult to the intelligence of Canadian workers to be told that a half dozen so-called International officers will determine what organization shall represent them. Unless I misjudge the temperament of the railway workers in this country they will permit neither International officers nor railway managements to dictate to them either as to the organization they shall join or whom they shall choose as their representatives.

I am depending on our membership generally to take an active interest in the present situation that has developed, and to do their utmost to bring into our Brotherhood the classes of railway workers referred to.

International Seamen's Union of America

The twenty-ninth annual convention of the International Seamen's Union of America, which has two Canadian branches, was opened in Baltimore, Md., on January 11, 1926.

After appropriate addresses of welcome, the convention started its business session by receiving the report of the credential committee, which, after enumerating the delegates entitled to take seats, recommended that the fraternal delegate from the National Sailors' and Firemen's Union of Great Britain and Ireland be also seated.

President Furuseth presented an address of considerable length, in which he reviewed the activities of the Union since its last annual meeting. One of the most important questions dealt with, was the National Merchant Marine Conference, which was organized by the United States Chamber of Commerce, and to which labour organizations were asked to send representatives. The president of the American Federation of Labour selected twelve members to represent that body and these, after several conferences with representatives of the ship owners, finding that they could not agree with the proposals of the latter with regard to shipping conditions, drafted a minority report, but this was subsequently voted down. Other questions which called for the attention of the president, was the proposed change in the international seamen's code and smuggling of immigrants and narcotics into the United States. Bills pending in Congress also called for attention as they particularly affected the union. The most important court decision, affecting the union, was with reference to the division of watches at sea and resulted in a complete victory for the International Seamen's Union.

The Secretary-Treasurer, in his report, drew attention to the efforts put forth by the International Union of Steam and Operating Engineers to have the unlicensed personnel of ships join that union. Attention was called to the fact that the American Federation of Labour had given jurisdiction to the International Union of Steam and Operating Engineers over the field covered by the charter surrendered some time ago by the Marine Engineers' Benevolent Association, but this charter had no reference whatever to the unlicensed personnel of ships. This was regarded as an encroachment upon the jurisdiction of the International Seamen's Union, and a formal protest was lodged with the secretary of the A. F. of L.

Secretary Olander reviewed the attempts made to disrupt the National Sailors' and Firemen's Union of Great Britain and Ireland and the steps he had taken to assist in combatting the activities of these disruptionists, stating that "they were led by the same men who sought to wreck our International Union a few years ago." In dealing with the International Seafarers' Federation, the secretary stated that it was the one effective medium by which direct and continuous affiliation with which the National Sailors' and Firemen's Union of Great Britain and Ireland and the trade union organizations of seamen in continental Europe could be maintained.

The convention adopted the suggestion of the president dealing with the subject of increased monthly dues and recommended that the proposal to increase the rate to $1.50 per month, in cases where this is not already done, be taken up for discussion by the various district unions in such a manner as in the judgment of each such union may seem best calculated to promote the interests of the membership. After a thorough discussion, the convention directed the legislative committee to work for the enactment of a Federal Seamen's Compensation law, provided, that such a law shall not modify any existing remedy, including the choice between compensation and the right to sue for damages after the injury has taken place.

A communication by president Furuseth addressed to president Green of the A. F. of L., setting forth fundamental objections to America's affiliation with the World Court, was endorsed by the convention. It was also decided to send two representatives to the special session of the International Labour Organization (functioning under the League of Nations) which is to convene at Geneva, Switzerland, this year, for the purpose of formally acting upon the several drafts of the proposed seamen's code.

The address of fraternal delegate Charles Jarman of the National Sailors' and Firemen's Union of Great Britain and Ireland was a much appreciated feature of the convention.

Following the election, which resulted in the chief officers being re-elected, the convention selected Washington, D.C. as the next convention city.

International Ladies' Garment Workers' Union

The formal opening of the eighteenth convention of the International Ladies' Garment Workers' Union took place on November 30, 1925, in Philadelphia. As stated in the convention call, the membership was informed that the union was passing through "the severest crisis in its existence" and that "the campaign for demoralization launched by its enemies from the outside many months ago, aggravated by unprecedented unemployment and its resulting misery, is beginning to affect the morale of the organization." In view of this situation and because a part of the membership was desirous of having an opportunity to introduce changes and reforms in the organizational system of the union, which required a change in the constitution, the General Executive Board decided to advance the date of the convention by six months.

The Credentials Committee referred the seating of certain delegates to the Appeal Committee, charging that their election was irregular. This drew criticism from Louis Hyman, leader of the "left wing," who declared that the "lefts" would not recognize or appear before the Appeal Board. The president interrupted by stating that if the delegates did not recognize every committee appointed by the convention, then they did not recognize the existence of the convention. He declared that the delegates to this convention were the supreme body and would pass upon and decide every question of disagreement upon the report of any committee. Chairman Snyder, of the Credentials Committee, announced that protests had been made against the manner of conducting the election in locals 2, 9 and 22, called "lefts" and 23, 48 and 62, "rights". He stated that these charges could not be dealt with by his committee and therefore they were referred to the Appeal Committee.

President Sigman, in his opening address, traced the growth of the union from its first convention, which was held in 1900 in Philadelphia (where there were twenty-five delegates in attendance) to the present, where the delegates numbered close to three hundred, representing a membership of over 100,000 men and women. He drew attention to the fact that the convention was called to consider vital problems, which dealt with the life and happiness of the workers in the industry and not for the purpose of delegates socially meeting each other. In his closing remarks, he stated his conviction that the convention would accomplish greater things than those of the past and would assist the labour movement of the country to further progress.

One of the most important questions with which the convention had to deal and which was referred to the Appeals and Grievances Committee, was the debarring of seventy-one

members of New York locals from holding office from one to three years, according to the degree of guilt as established by a trial board of the General Executive. In its issue of December 18, *Justice* (official organ of the International Ladies' Garment Workers' Union) referred to this matter as follows:—

One of the last acts of the convention was an approval by the delegates, without a dissenting voice, of the recommendation of the Committee on Appeals and Grievances to grant amnesty to all offenders against the laws and rules of the Union and to reinstate them to full membership rights. The recommendation of the committee divided these offenders into two groups—such as have merely belonged to groups banned by the Boston convention in 1924, and such as have been guilty of active opposition in a manner unbecoming union men and women, and who have pursued destructive and abusive tactics in carrying out their acts. The first group was granted unconditional amnesty and restored fully to all rights, while the second group was left to the discretion and autonomy rights of the individual locals to which they belonged, with the understanding that these locals be guided by the spirit of tolerance and harmony which the convention had adopted in all its proceedings and deliberations.

Other resolutions adopted by the convention were as follows: (1) Favouring the continuance, on a larger scale, and the educational activities as carried on by the Educational Department of the union; (2) Urging the Executive Board to publish a Yiddish and Italian translation of Dr. Levine's "The Women's Garment Workers"; (3) Asking the General Executive Board to continue co-operation with the Manumit School (an institution which enables children of workers to receive an education by modern methods).

The election of officers resulted as follows: President, M. Sigman; Secretary, A. Baroff; General Executive Board, J. Halperin, D. Dubinsky, E. Reisberg, M. Amdur, S. Ninfo, L. Antonini, J. Boruchowitz, L. Hyman, J. Portnoy, D. Gingold, M. Friedman, J. Hochman, C. Kreindler, D. Godes and H. Greenberg.

International Fur Workers' Union

The seventh convention of the International Fur Workers' Union was opened on November 9, 1925, in Boston. This convention was to have been held in May, 1926, but owing to differences which had taken place between the General Executive and the New York Joint Board, it was decided to call the delegates together at an earlier date in order that these differences might be straightened out.

President Kaufman explained the situation in the different parts of the country and the accomplishments of the International since the last convention which was held in Chicago eighteen months previously. He presented a report of considerable length on the strike that had been carried on for the past nine months in Montreal and also explained the activities in Philadelphia, Boston, South Norwalk and in other parts of the country.

Mr. W. Miller, business agent of Local No. 7, Cap Makers' Union of Boston, showed the friendly relations existing between the Cap Makers and Furriers in Boston and drew attention to the fact that for some time they had occupied the same quarters and assisted each other in their hard struggles. Mr. Miller stated that "he hoped the time will soon come when the entire needle trades will be organized into on big union".

Joint Board.—Early in the convention, the president read his supplementary report. The essence of this report was a strong accusation against the New York Joint Board* because it did not adhere to the letter of the constitution in conducting its elecion and because it did not take into consideration the authority of the General Executive Board. After considerable discussion the supplementary report of the president was handed over to the "Committee on Officers' Reports." This committee brought in a recommendation that "the convention should declare the action of the Joint Board in violation of the constitution and therefore declare the Joint Board guilty." A substitute resolution was presented by one of the delegates, which embodied the committe's recommendation and added that in future the constitution must be strictly obeyed. The chairman refused to allow any debate on the substitute resolution, which carried by a small majority. Subsequently, a delegate asked the president to explain the relationship between the General Executive and the Joint Board on the basis of the adopted resolution. The president explained that all the complaints and accusations of the General Executive against the Joint Board had been straightened out and that in future the two bodies would work in harmony. Apparently, this explanation was not satisfactory, and, seeking further assurance, one of the delegates introduced a resolution which demanded that the General Executive to be elected at this convention be instructed to support the Joint Board in its fight against former officials "who are still exercising their terror, and that the newly-elected executive shall declare itself against such methods of graft and terror." Another resolution on this question was also introduced. However, neither resolution was voted upon,

* The LABOUR GAZETTE, November, 1922 (page 1150), contained a note on the Joint Board for the clothing industry at New York. The Board is composed of representatives of the employers, workers and general public.

but both were referred to a committee of five. This committee brought in a resolution, in which it was stated that the actions of the Joint Board against the International were right under the special circumstances then created and that in the future the constitution must be obeyed. This resolution was adopted.

Among the other resolutions adopted by the convention were: (1) Favouring the forty-hour week, divided into five working days; (2) Urging the abolition of overtime work; (3) In favour of the union label on fur skins and the organization of the fur dyeing industry.

The election of officers resulted in the following new General Executive Board: O. Shachtman, General President; I. Wohl, General Secretary-Treasurer; I. Winnick, First Vice-President; H. Sorkin, Second Vice-President; L. Delsignore, Third Vice-President; H. Kalmikoff, Fourth Vice-President; A. Gross, Fifth Vice-President; M. Corbett, Sixth Vice-President; S. Budkowitz, Seventh Vice-President; I. Weinstein, Eighth Vice-President; J. Dissin, Ninth Vice-President; M. Harris, Tenth Vice-President; H. Englander, Eleventh Vice-President.

Upon assuming office the General Executive Board made a declaration of policy to the membership through the November-December issue of the official journal, *The Fur Worker*, in part, as follows:—

We must begin an intensive campaign to organize the various branches of the fur industry throughout the United States and Canada. The convention pledged us to initiate the movement for the amalgamation of the needle industry. We aim to work out a comprehensive educational programme for our members, in order that they may more profoundly understand the tasks of a workers' organization, in order that they may feel these tasks and the duties of a union member, and strive more and more to strengthen the union and make it fit to stand in line with the revolutionary workers' organizations.

Quebec Pilots' Union

The Quebec Pilots' Union, at their annual meeting in January, unanimously recommended that the members of the Dominion Wreck Commission should be appointed by and controlled by the Department of Justice instead of by the Department of Marine and Fisheries, as at present. In discussing this question, the President, Mr. J. A. Bernier, referred to the case of a recent accident to the Steamship Montrose, in which an investigation had been conducted by the Wreck Commissioner and two assessors who had never handled that particular kind of ship. This it was claimed was in direct contravention of Article 784 of the Canada Shipping Act, which requires that all officers conducting such an investigation be familiar with the subject causing the investigation. The captain and pilot were tried by men who occupied an inferior position to their own, when they should have been brought before a tribunal of their equals or of men who professed a superior knowledge and experience.

The union protested strongly against existing conditions, and resolved to make every possible effort to have safer pilotage methods adopted for the protection of its members. Mr. Bernier suggested the placing of two pilots on every ship which pilots are obliged to take through the river during the more dangerous season of the year. Navigation through ice, when 95 per cent of the ordinary aids to navigation were removed, was a most hazardous undertaking and provision should be made for fairer treatment of the pilots who are obliged to undertake such work.

Mr. Bernier was re-elected president for a third term.

"Equal Rights" for Women Workers

In connection with the Women's Industrial Conference which was held at Washington, D.C., during January, under the auspices of the Women's Bureau of the United States Department of Labour, trade union women presented a petition to President Coolidge in which they opposed the proposals of the National Women's Party for an "Equal Rights" Constitutional Amendment. Such an amendment, they asserted, would abrogate all existing legislation in favour of working women.

"In view of the agitation which has for its purpose the destruction, by a so-called equal rights amendment, of the laws on the statute books of nearly every State in the Union which limit the hours and fix standards for the working conditions of women in industry, we desire to reiterate at this time our support of such labour legislation and our hope that it may be extended and its standards improved. We regard such not as discrimination against women, but means toward an equal industrial footing for women and men. Generally speaking, the women-employing industries are the industries in which the longest hours prevail. The destruction of all legal limitations upon hours of work for women would have the effect of lengthening women's hours of labour, without affecting the hours of men, thereby increasing the present inequality between the hours of women and those of men.

"The American Federation of Labour has repeatedly declared its opposition to the so-called equal rights amendment proposed by the National Woman's Party because of its destructiveness to labour standards and to industrial equality of any real sort. We trust that you share our views."

"THE CONTRIBUTION OF LABOUR UNIONS"

PRESIDENT WILLIAM GREEN, of the American Federation of Labour, delivered an address before the American Association of Labour Legislation at New York on December 30, his subject being "The Contribution of Labour Unions."

After a reference to the prevalence of poverty and distress, and to the general desire of society to remove the causes of human suffering, Mr. Green proceeded as follows:—

"While we cannot attain the ideal by eradicating all causes of human ills we can deal with some of the causes from which our social ills originate in a concrete and effective way. Chief among these are the social problems growing out of industry and inseparably associated with industrial development. In this category may be placed industrial accidents, child labour, unemployment, occupational diseases, sanitation and industrial hygiene. There are other classifications which, while important, are considered of a minor character. All have their bearing upon the main and principal matters of interest.

Social Policy

"Labour has a lively interest in all public questions," Mr. Green continued. "It is affected by all matters of public policy because it suffers more quickly than other groups of people from the ill-effects of an unsound public policy. It is especially interested in social problems because it suffers directly from social and industrial injustice. It is vitally interested in remedies which may be proposed or applied in the attempted cure of social ills. Organized labour in the United States has given much thought and study to the economic and social questions which affect the well-being and happiness of its members. It has sought to increase the wages of working men and women through organized effort so that they could live in accordance with the requirements of American citizenship. The demand for the establishment and maintenance of high wage scales is based upon the American needs of American working people. Included in this is the American standard of living, education for children, protection during the intermittency of employment and during periods of illness and adversity. It has contended for shorter hours of employment so that the worker may have some leisure and may thus have an opportunity to develop the cultural and spiritual part of life. Through the establishment of trade union benefit funds organized labour has afforded protection to many working people and their families during periods of idleness and ill health. Most all labour organizations have given this sort of service to their members. Many others have established "superannuated" benefits providing for the payment of pensions to members after they have reached the age of incapacity for service. It is impossible to measure the service which organized labour has rendered in this way and it is impossible to estimate the amount of assurance which many working men and women have experienced as a result of the establishment of beneficial agencies by organized labour. All of this work performed by organized labour has been of a purely voluntary character. It has endeavoured to meet in a practical way both the needs and the desires of the workers for a degree of protection during periods of illness and in some instances in old age. It is recognized that this service has only been rendered in a limited way. It has been given to the membership of organized labour who voluntarily accepted such service.

Workmen's Compensation

"In a broader way the American Federation of Labour has been making its contribution to the development and application of a remedy for industrial accidents. It early realized a practical remedy which could be applied both specifically and generally could only be found through the passage of adequate legislation. It therefore declared itself in favour of the passage of workmen's compensation legislation. When this sort of legislation was proposed and was given support by the American Federation of Labour and other public-spirited groups, such as are represented here, it was considered revolutionary and it met with strong opposition. The acceptance of this principle required a decided change in the thoughts and attitude of employers, employees and those who composed the law-making bodies of the land. Under the old concept working men and women accepted employment under a legal rule which assumed that they had full knowledge of the risk and hazards of the industry. Because of this assumption the employer and the industry were relieved of liability in case of accident or death resulting therefrom. This legal principle was firmly imbedded in our system of jurisprudence. It was a part of our common law procedure and its operation had been clearly defined by legal interpretation and legal precedent. The new doctrine, as represented in workmen's compensation legislation proposals held that industry was both liable and responsible for all accidents. It proposed that injured workmen

should be compensated and the dependents of killed employees should be cared for regardless of the circumstances which caused the fatal accident. By this process the cost of industrial accidents became a lien upon industry and all accidents were compensable. Industry owed this to the injured employees and to the dependents of killed employees where the accident was sustained during the course of employment. Organized labour has concentrated its efforts in support of workmen's compensation legislation. To-day forty-two states have passed workmen's compensation legislation. Only six have failed to enact workmen's compensation laws.

"The American Federation of Labour has given the subject of workmen's compensation special thought and special study. It has drafted and prepared a report on workmen's compensation legislation defining and announcing the standards which it believes should be embodied in an ideal workmen's compensation law. The El Paso convention of the American Federation of Labour recommended to the membership of organized labour that it earnestly endeavour to secure amendments to the existing workmen's compensation laws which would embody within them the standards recommended and contained in the report adopted by the American Federation of Labour. The organized labour movement of the United States is now engaged in carrying forward this policy and will continue its work and its efforts to secure the passage of workmen's compensation legislation in every state in the Union, conforming to the standard act approved and adopted by the El Paso convention of the American Federation of Labour.

"The American Federation of Labour is most aggressively supporting a workmen's compensation law to apply to those employed in private industry in the District of Columbia and in co-operation with those directly interested is seeking to find a way by which the benefits of workmen's compensation may be extended and applied to the workers engaged in the maritime service and in interstate commerce.

Insurance

"The American Federation of Labour conducted an investigation of group insurance and life insurance and made a most comprehensive report of its investigation to the membership of organized labour. Based upon the facts contained in this report and acting in accordance with the instructions of the convention of the American Federation of Labour held in El Paso, Texas, the President of the American Federation of Labour called a conference of international and national representatives at which it was decided that a Labour Life Insurance Company would be organized. This insurance company has now completed its organization and is preparing to engage in the sale of life insurance on the individual and group plan basis of insurance. We regard this as a distinct contribution to the solution of this phase of our social problems. We entertain the hope that the facilities of this Union Labour Life Insurance Company, placed at the disposal of the working people of our country, will be of great value to them and will serve all of their insurance needs. We have all been mindful of the growth and development of labour banks. Within the last five years labour banks have grown until there are at the present time thirty-three labour banks established. These labour banks have a combined capitalization of $7,992,000, with total resources amounting to $94,630,822. The stock of these banks is distributed among labour unions and the members of labour unions. The administration of these banks is in the hands of members of trade unions. This is one of the significant developments of trade unionism. It had its origin in the trade union movement of the United States. We find this development in no other country except our own.

Education

"In the field of education organized labour has manifested a very deep interest. It was one of the first organizations in our country to declare in favour of compulsory school attendance and compulsory education. It has pursued a consistent policy in support of its initial and original position upon the subject of education. More recently it espoused the cause of workers' education—adult education. Under the direction of the American Federation of Labour the Workers' Education Bureau is functioning and it is regarded as an important department of the American Federation of Labour engaged in promoting the work of organized labour and organized labour's educational policies. Through the organization of study classes it is bringing education to the workers and in this way is creating an opportunity for education dealing with social, economic and industrial problems. This service is given to many who were denied the privilege of either a high school or college education. The American Federation of Labour regards the workers' education as a powerful force in the interest of organized labour and in the work of the American Federation of Labour directed toward the solution of our economic and social problems.

Fear of Unemployment

The working people must always rely upon their earning capacity for the acquisition of the necessaries of life. This is their capital and when this is impaired through illness or disability their income must necessarily cease. It is the consciousness of this fact that fills the mind of the working man or woman, with a dependent family, with anxiety and apprehension. The wage earners know that so long as they are employed and so long as they enjoy health they can earn money and with their earnings they can meet, in a reasonable way, at least, the requirements of the family budget. But during each day's work and throughout each day's experience they are constantly reminded of the fact that sickness may overtake them, that accidents may occur and that even death itself might cut them down. It is this constant, anxious, haunting fear of the future that is ever present in the hearts and minds of the workers. Society is interested in finding a social cure for this state of mind. If the cause may be removed or even if it may be modified a more tranquil and happy state of mind will prevail among working men and women. It is to the removal of the cause of social anxiety and social apprehension, resulting from sickness and incapacity among working people, that labour wishes to make its direct contribution. If we can find, through the application of social justice methods, a way by which the worker and his family may be cared for during periods of illness we will do much toward solving a most difficult social problem. If we can further the cause of workmen's compensation legislation so that there will be no waiting periods and so that adequate medical and hospital care is furnished injured workers, with adequate compensation, we will do much to relieve social distress. If we can find a way by which intermittent employment may be avoided and opportunity for employment can be made continuous we will correct one of our most distressing social ills. Through its support of workmen's compensation legislation, through the opportunity for insurance against sickness and death (offered through the Union Labour Life Insurance Company), and through the education and agitation which is being carried on against the evil of unemployment labour is contributing very substantially and in a most helpful way to the bringing about of an ultimate solution of these vexing social problems.

INDUSTRIAL RELATIONS ON CANADIAN NATIONAL RAILWAYS

MR. R. A. C. HENRY, B.Sc., M.E.I.C., director of Bureau of Economics, Canadian National Railways, read a paper on January 14 before the Engineering Institute of Canada, Montreal Branch, on the general subject of "The Influence of Personnel on Management." After describing the functions of the engineer in industry, Mr. Henry proceeded to analyze the operation of a business undertaking as follows:—

"In preparing a budget intended to represent the estimated results of operation in any industry, from the cost side, one encounters in ordinary every day business the following factors: (1) labour; (2) material; and (3) interest upon investment, including depreciation. The purely operating costs consist of the first two, the third being an income charge. The proportion of the total operating expenses absorbed by labour and material respectively will undoubtedly vary considerably and depend upon the character of the particular industry under consideration. In the transportation field it will generally be found that something in excess of fifty per cent of the operation expenses consists of wages paid to employees.

"The Canada Year Book for 1924, published by the Dominion Bureau of Statistics, shows that for the year 1922 the value added to materials in process of manufacture was $1,159,316,000, of which $497,113,000, or 43 per cent, represented salaries and wages paid. The Commerce Year Book, published by the United States Department of Commerce, for the year 1924, shows that the value added to materials in the process of manufacture amounted to $25,867,000,000, and that of this amount $11,000,000,000, or 43 per cent, represented wages paid."

The Personnel Problem

Mr. Henry next outlined the origin of the "personnel problem" commencing with the industrial revolution a hundred years ago, when the attention of employers was confined to the processes of manufacture, to more recent times when they found that the human factor has been neglected. "It was found," he said, "that instead of there being only two human factors in industry as has been generally assumed—and as actually was the case prior to the industrial revolution—namely, the

owners of the industry and the working forces, this new development had interjected four human factors into the problem of modern industry, namely, the owners, or stockholders; the executives; the intermediate supervisory organization; and the general working forces. The realization of this fact forced the executive to the conclusion that the time had come when the human element in industry required more careful study and intelligent attention. Hence we have the personnel problem. Owing to the lack of contact and intimate relations between the employer and employee, the two parties became mutually antagonistic, the result being an unhealthy and mistaken view of social relations. To remedy this condition mutuality of interest must be shown to exist.

"Safety, health, compensation, thrift inducements, educational opportunities are all beneficial, provided they are not regarded by the employer as things for which he may expect extra effort or consideration from the employee. These things will be approved by the employee only when his immediate personal interests are given proper consideration, and these latter are often surprisingly simple compared with the sociologists' anticipations. Industrial relations should be organized with the view primarily of giving serious study to all of the conditions and obtaining effective administration for any policies which may be adopted. Industrial personnel may be defined then as the creation of the machinery necessary to give sufficient intensive attention to the human factors in industry, to make sure that the entire human element and man power in the industry is mobilized for attaining the proper objectives of that industry.

Canadian National Railways Plan

It may be interesting to the members of the Institute, Mr. Henry continued, to know briefly what is being done on the Canadian National Railways looking towards a more sane and reasonable relationship with its employees.

The Railroad Labour Organizations in Canada are largely international in scope, a vice-president generally being appointed to look after Canadian affairs.

"The agreements with our employees are made with a committee representing the employees, not directly with any labour organization, although we know that they are members of and operate under the constitution of the various labour organizations they represent. There are two exceptions to this practice—one being with our shop crafts employees and the other with our maintenance of way and structures department employees—these two agreements being made through the Railway Association of Canada at the request of the above named organizations in 1918, in order to obtain uniform rates and working conditions throughout Canada in line with the national agreements made in the United States after the latter country took over the operations of the railways in that country on January 1, 1918.

The employees have their respective periodical conventions, and each elects a General Grievance Committee as well as a General Chairman for a defined territory (generally covering the same territory as the Railway General Manager) and Local Chairman for local matters.

All agreements are subject to revision or cancellation on thirty days' notice, except that for the maintenance of way and signal department employees which provides for a sixty days' notice.

The elected general chairman acts as Chairman of the General Grievance Committees as well as of committees handling negotiations with respect to wages and working conditions.

When an employee feels he has been unjustly treated or that he has a grievance in connection with wages or working conditions, he may take the matter up either directly or through his Local Chairman up to and including the superintendent of the division; if the matter cannot be adjusted with the superintendent, the local chairman may turn over the case to his general chairman, who, if he considers there is merit in the employee's contention, will appeal the case to the general superintendent, and, if necessary, to the general manager. When it is impossible for the general manager and the general chairman to agree, then, if it is a case of interpretation of the schedule, the general manager will refer the matter to the Chief of Wage Bureau, Montreal, for an interpretation before definitely declining to adjust the dispute. If the general manager's contention is upheld, the general manager and the general chairman write up the case—first agreeing on and writing "a joint statement of facts"—after which the employees will set out their contentions, and the railway officer does the same. The dispute is then referred to the Board or Committee provided for in the agreement between the railway and the respective organization.

In the case of the following organizations, the case would be referred to the Canadian Railway Board of Adjustment No. 1—created in August, 1918, for the purpose of adjusting grievances:—

Brotherhood of Locomotive Engineers.

Brotherhood of Locomotive Firemen and Enginemen.
Order of Railway Conductors.
Brotherhood of Railroad Trainmen.
Order of Railroad Telegraphers.
United Brotherhood of Maintenance of Way Employees and Railroad Shop Labourers.

This board is composed of twelve members, six being representatives of labour organizations—generally vice-presidents, and of six railway officers, a chairman and vice-chairman being elected from among the twelve members, such position alternating every six months between a railway officer and an officer of the labour organizations. The decisions of the board are final and binding upon both parties.

This board has done excellent work; there has never been occasion to call in an arbitrator since its existence. This board is considered one of the best mediums of disposing of grievances, and is very helpful in maintaining a harmonious relationship between employees and the railways.

In the case of shop crafts' employees, the joint write up of the general manager and general chairman is sent to the Railway Association; the secretary of the Association notifies the sub-committee on Wages and Working Conditions, and also advices the president and secretary of Division No. 4, and a meeting is arranged through a board consisting of ten members—five being labour organization representatives and five being railway representatives.

In either case, whether the matter is referred to the Canadian Railway Board of Adjustment No. 1, or to the Railway Association of Canada's sub-committee, the parties to the dispute are advised of date the dispute will be heard. Both parties appear before the Board of which they are a party, and, in addition to the written statements, submit oral arguments in support of their respective contentions. The board asks of each party such questions as, in its opinion, will help to clarify the point at issue, after which the parties to the dispute retire and the board considers the case and arrives at a decision, which is made unanimous once adopted.

On the whole, the results obtained through this procedure have been very satisfactory indeed, as evidenced by our freedom from labour troubles.

The Canadian Brotherhood of Railroad Employees, which covers clerks, freight handlers, station, stores and shop labourers, has no international affiliations and, while there is no obligation on their part to bring their grievances before the Board of Adjustment No. 1, their cases will be heard, provided they agree in writing beforehand that they will accept the decision of the board as final. It is expected, however, that within a short time, a separate Board will be set up for these employees.

At the present time, the Canadian National Railways has in force in several of its shops what is known as the Premium System, the essential features of which may be described as follows:—

(1) A careful classification of the work to be done in the shop in question is made.
(2) Careful studies are made of the time required to perform the work under each classification.
(3) A complete system of cost accounting is installed.
(4) Employees are paid additional compensation in the form of a percentage allowance equivalent to the percentage improvement which they make over the standard time set in the time-studies for the class of work which is being done.

At these particular shops. meetings are held monthly at which shop superintendents, foremen and charge hands exchange ideas, review the situation, offer suggestions and have a general discussion of the various problems from the standpoint of the company and the men. This system is working out very satisfactorily and results so far have been good.

Co-operation between standard organizations of railway shopmen and the railway management has long been the subject of discussion, and a tentative plan for co-operation management is being tried out on the Canadian National Railways.

Briefly, co-operation in management means the assumption of responsibility by the employees towards the major welfare of the railway enterprise as a whole. This finds expression in the work of joint shop committees, set up at each plant. The committees meet in co-operative conference for discussions and suggestions in such matters as:

(1) Job analysis and standardization.
(2) Better tools and equipment.
(3) Care and distribution of tools.
(4) Proper storage, care and delivery of material.
(5) Economical use of supplies and materials.
(6) Re-arrangement of machine tools.
(7) Proper balancing of forces and work in shops.

(8) Co-ordinating and scheduling of work through shops.

(9) Improving quality of work.

(10) The introduction of output records.

(11) Condition of shops and shop grounds especially in respect to heating, lighting, ventilation, safety, etc.

(12) Increasing effectiveness of shopmen's organizations.

(13) Securing new business for the railroad.

(14) Steps necessary to secure new work.

(15) Improvements in technical training of apprentices and others.

(16) Recruiting and building up of working force with competent responsible individuals.

(17) Local stabilization of employment.

(18) Improvements in physical working conditions.

Representatives of the employees and management are now engaged in setting up the necessary machinery.

The participation in, or "sharing fairly" the benefits of co-operation is one phase of the plan which probably presents a serious difficulty, for the reason that measurement of all of the work performed by the employees of the Maintenance of Equipment Department in relation to man-hours is something which heretofore has not been accomplished. Time production in manufacturing is simple in comparison.

In several of the company's locomotive and car shops, a premium system is in effect, as previously stated, whereby work performed on time-schedules can be definitely measured. At some points, more than half of the shop activities are on a time production basis.

A committee is now at work endeavouring to evolve a plan whereby a division may be made between employee and employer of such benefits as are expected to accrue from this new scheme of co-operation. It is realized that new and difficult ground must be broken, as the ascertainment of exact cost data in maintenance of railway equipment has never been vital to the existence of the Mechanical Department, with the result that reliable data is not obtainable through any existing accounting practices.

The indications are that in so far as the heavier repair work is concerned, a solution of the measurement difficulty lies in the complete application of the premium system already mentioned. Further study will develop to what extent this system can be applied to minor repairs in yards and at engine terminals, and also to the housing and caring for locomotive actually in transportation service.

Conclusion.—It is evident, therefore, judging from our own experiences cited above, that this problem is one containing many angles. We have not solved them, and they can only be solved by intensive study and the carefully working out of details having in view all of the complicated inter-relations of modern society.

Due to the numerous activities into which the railway industry is divided, our problem is an epitome of the larger problem applicable to industry as a whole, and we are in hopes that our efforts may add materially to the solution of this greater problem of finding a modus vivendi for modern civilization with its complicated inter-relations of men, races and religions.

I hope I have been able to impress upon the members of this Institute that there is a definite duty resting upon the engineering profession to study these problems, and aid by their experience and ability to think clearly in a solution which will be based upon intelligence and a clear recognition of the different elements involved.

Canadian National Railway Shops at Transcona

The Canadian National Railways shops at Transcona, Winnipeg, where the "co-operation plan" of joint management was established on August 12, 1925 (LABOUR GAZETTE, September, 1925, page 858), cover seventeen acres of ground and were designed to handle the repairs on the 1,800 miles of National Transcontinental lines from Moncton, N.B., to Winnipeg, and all branches are equipped with up-to-date machinery for all operations. In the erecting shop a 150-ton travelling crane lifts engines bodily from the tracks over other engines to place them in the repair pits. In the car department 1,266 men are employed and the monthly payroll totals $134,000, the coach shop output is 82 cars per month, of which 30 are "heavies," while the capacity of the freight shop is 7,318 per month, and the wood mill has a capacity of 110,000 feet valued at $30,000 per month.

In the locomotive department there are 889 employees under a supervising staff of 31. The payroll here is $91,500 per month, and the output is 20 engines monthly. The foundry discloses many repair parts in various stages of manufacture from the raw material in the mould to articles ready for use. In this department the capacity is 9 to 12 tons per day, which keeps the men busy as bees attending to their respective jobs.

Thirty men are engaged in the power house where the generators that drive the machinery of the various departments are located.

SAVINGS AND PROFIT SHARING FUND OF MONTREAL FIRM

CHRISTIE, BROWN AND COMPANY, Limited, biscuit manufacturers of Montreal, with over 500 employees, opened on January 1 an Employees' Saving and Profit Sharing Fund. No employee is obliged to join the fund, but every employee of the company is eligible for participation after one year of service and during all the time he remains in the company's employ. Any employee wishing to participate in the fund must sign an acceptance form in a manner satisfactory to the board of trustees, and deposit this with the board.

The board of trustees, by whom applications for participation have to be approved, is composed of three officers and two employees, their decision to be considered unanimous on a majority vote. This board is required to invest the money in the fund at interest of at least 5 per cent.

Participation calls for deposit of five per cent of each participating employee's wages, unless such deposits in any year shall aggregate $104, in which case no further deposits are to be made in that year. This limit is fixed so that the more highly paid employees may not share unduly in the contribution of the company and the profits of the fund. The company's contribution of 5 per cent is expected to equal the amount paid in by the employees, and may be increased by increasing efficiency in all departments.

Through this scheme, an employee having thirty years' service to his credit may retire with the sum of $14,142.

The plan has four objects: (1) It affords all employees a share in the profits of the business and helps them, by saving, to provide a substantial sum for their future. (2) It provides a method for the company to add a part of its profits to the savings of employees. Those who steadily participate in the fund and remain in the employ of the company during the whole of their business life, ensure for themselves an important contribution towards their future maintenance. (3) Those who achieve a long-service record, but who may not remain with the company the whole of their business life, will also have accumulated a considerable sum. (4) The fund will assist in making provision for the family in the case of an employee's death.

Proposed Pension Plan for Municipal Electrical Employees

The Association of Electrical Utilities of Ontario, at their annual convention at Toronto in January, considered a proposed plan to provide retirement, disability and death benefit which would affect 2,833 employees of municipal electrical utilities in the Province. These employees have no share in the provincial government's civil grants, which extend to employees of the Ontario Hydro-Electric Power Commission. Action was deferred by the Association until the municipal taxpayers have an opportunity to understand the proposal.

Under the proposed scheme, pensions are to revert to January 1, 1910. They will be payable at the age of 65 years, on a basis of 1 per cent of the salary paid, multiplied by the years of service. For this the employee pays into the fund 2½ per cent of his salary monthly, with a minimum of $2.

For total and permanent disability benefits the pension will be $50 a month plus interest, as well as the service annuities already secured will be payable at once instead of at the age of 65.

For death benefits the pension proposed is 2½ per cent of each year's salary, up to 20 years, with a minimum of $500, which is to be paid to designated beneficiaries on the death of the employee.

In case of retirement, the employee may withdraw all that he has paid in, without interest, except in the case of dismissal for cause.

At the half-yearly session of the New Brunswick Plumbing Board held in December, it was reported that 276 plumbers were licensed to practise in the province. A number of reports were received of an inferior class of work being done in some communities; also regarding plumbers coming into the province from outside and doing certain jobs in this province and leaving without obtaining certificates. In the future these men are to be dealt with under the act.

The operators in the Minto coal mines, New Brunswick, recently asked the provincial premier to appoint a committee of disinterested parties to investigate conditions in the mines. The Honourable Mr. Baxter replied that he would consider the proposal before taking action.

ASSOCIATION OF CANADIAN BUILDING AND CONSTRUCTION INDUSTRIES

THE eighth annual convention of the Association of Canadian Building and Construction Industries was held at Toronto from January 25 to 28. The President, Mr. John V. Gray, in his opening address forecasted that improved business conditions in Canada would result in increased activity in the building industry for part of 1926, and that conditions would continue good throughout the year if there was a plentiful harvest next season.

Builders' Problems

Mr. Gray referred to certain matters which should engage the attention of the industry:—Standard contract forms, a code of ethics, standard percentage to cover extras, standards of estimating, standardization of by-laws, of plant and plant layout, of contract profits for each size and each kind of job, of contract overhead, the opening of tenders in the presence of interested parties and the prompt return of marked checks covering contracts on tender.

The president advocated greater care on work to avoid an increase in the rates of the Workmen's Compensation Board. He advised contracting firms to include on their staffs engineers who were capable of fixing the strengths of material.

He dealt with construction costs in the United States and Canada, comparing them with the costs of 1913. Costs in the United States were 94 per cent higher than in 1913, labour was 114 per cent above pre-war figures, and material remained 75 per cent higher. In Canada the situation was more normal, labour 70 per cent and material 53 per cent. Mr. Gray expressed the view that "wage scales in many lines were out of balance with prices and should be further liquidated." Unless this were the case, he declared there would be no foundation for a real period of prosperity. In commenting upon another feature of present conditions, Mr. Gray stated that "there were 50 per cent too many contractors, all waiting like a lot of wolves ready to take contracts at cost or a loss."

Safety Fundamentals

Mr. R. M. Little, of the New York Bureau of Rehabilitation, addressed the convention on "Some Fundamentals of Industrial Safety." He mentioned several large concerns which by adopting and following a safety programme had cut down by fifty per cent their losses from industrial accidents. "Safety has to commence at the top and proceed to the bottom. It has to commence from the main office and go out to the plant and on the job. In other words, you are not going to promote much safety in the building and construction industries of the Dominion unless the men at the top of these organizations believe in it, plan for it, and spend money for it. You cannot delegate it to someone else when it is not practised and worked by yourselves. I have seen it demonstrated time and again where employers have had the platonic wish for their employees to be careful, but they themselves were cherishing at the back of their heads the idea that it was a folderol. Now so long as you have that idea at the back of your mind you will not have an effective safety organization.

"The next thing, if you have a company of any size: have a Safety head functioning under your general manager, the president or whoever is the active man in control; link up your safety plan with the executive force of your company and make it a part of it, just as definite a part of it to prevent accidents as it is to construct the building. If you have a small company and you cannot afford to do that, break in a superintendent or a foreman and have him inaugurated with it, but have your Safety plan. It does not require a very large construction company to keep employed a good safety engineer, and you can pay him a handsome salary because of what he saves.

"The time to plan your safety is when you organize your work. It has to go to the superintendent on the job and to the foreman on the job. It is while you are taking on your men that your danger is greatest; then as you become stabilized the losses are reduced. Then when you are cutting down your scaffolding and discharging your men again your accident frequency goes up. Your accidents occur while you are getting ready and when you are reducing your force. While you are stabilized, with good housekeeping all around the job, you do not have any accidents. The beginning and closing of a construction job is where you have your accidents. Therefore good housekeeping is one of the absolute necessities in your business as well as in any other if you are going to prevent this large cost of compensation.

"Get the thought into the minds of the superintendent and foremen that they are just

as responsible in engaging their men and in trying to develop safe habits and practices as they are for production, and get their minds into a frame where they will constantly be thinking about it.

"Just go to buildings erected by the Stuart Company, by the Ley Company and the Fuller Company and observe their scaffolding, observe the runways, observe the hoists, the material going in and the waste going out, and observe the system and order about it. That is the way in which they have eliminated their waste.

"Every good, intelligent employer likes to have a stable, contented working force, and how are you going to hold them to yourself? A little human concern goes a long way with working people, and if you are concerned about their welfare, get them enlisted with you and co-operating with you, you build up their *morale,* and out of it there comes that larger satisfaction of life as well as the saving of money."

Vocational Training in Industry

"Craftsmanship" was the subject of an address given by Dr. W. W. Charters, of Chicago. The speaker emphasized the importance of training workers in the building trades and stated that at least two-thirds of the training must be given on the job even after the vocational schools had done all that could be expected of them.

The essentials of craftsmanship were set forth as—honest work, skill and artistic ability. A man cannot be a craftsman unless he gives a fair day's work to his employer, but no contractor should expect to receive such service who is not himself strictly honest in his work. If he substitutes inferior materials or skimps the job in order to make greater profit he cannot expect his employees to do honest work.

Skill is a matter of training and experience and can only be obtained through years of practice on the job and by taking an interest in the work. Unless employers are prepared to encourage good work by advancement or special recognition and undertake to provide adequate training for young or new employees, they cannot expect to develop or retain a staff or skilled men.

Artistic ability is a matter of individual taste and training. Some men can never acquire the ability of giving an artistic finish to their work but no worker should be called a craftsman who lacks this ability. It is the quality which creates a sense of pride in one's work and which distinguishes the true craftsman from the ordinary skilled worker. Under modern systems of production it is difficult to develop pride in craftsmanship, but if each employer will undertake to train his workers and endeavour to produce the best possible results for the money expended, the individual workers will take a pride in doing their work well and will become loyal supporters of the firm which employs them.

Dr. Charters urged the contractors to co-operate with the vocational schools throughout the Dominion. He pointed out the advantages of school training for citizenship and general culture in addition to the benefits of shopwork or vocational training which enables a boy to intelligently select a suitable occupation and to enter it with a sound training in the fundamental operations and principles of the trade. He emphasized the necessity of basing courses of study in practical or shop subjects on job analyses, and indicated the part which employers must play in providing the schools with information and advice in order that the school work may be more closely related to the needs and working conditions of industrial life. He advocated the appointment of educational directors for industrial organizations such as the Association of Canadian Building and Construction Industries, and indicated by illustrations from the United States the work which might be done. The work of Mr. Layton Hawkins, Educational Director for the Tile Manufacturers' Organization, was described to show how courses of study may be organized to meet the needs of any industry or group of industrial organizations.

The address was well received by the contractors and will undoubtedly be of benefit to them in their efforts to revive or rebuild apprenticeship in the building trades. These efforts are meeting with success in Hamilton, Vancouver and a few other centres but much remains to be done before boys entering the building industry will be assured of adequate training and a reasonable prospect of continuous employment during the year. The earnest efforts being made to encourage winter construction will do much to stabilize the employment conditions and attract desirable boys to the industry.

Apprentice Honour Certificates

At the final luncheon, Mr. C. Blake Jackson, as the representative of the General Contractors' Section, presented honour certificates to firms whose boys had won prizes in the apprentice contest last September. It will be remembered that this contest took the form of the erection of a Mothers' Rest Building during the Canadian National Exhibition

at Toronto. Members of the Association sent their boys for three-day periods and the work was done in full sight of the crowds of visitors to the exhibition. Prizes, consisting of high class working tools for their trades, were at that time presented by the Association to the boys making the best showing.

The honour certificates were won by the following firms:—

Section (*a*), Bricklayers—(1) Dunker Bros., Kitchener; (2) John V. Gray Construction Co., Toronto; (3) H. N. Dancy & Son, Toronto.

Section (*b*), Bricklayers—(1) Anglin-Norcross Ltd., Toronto; (2) W. Page & Co., Toronto; (3) J. R. Page, Toronto.

Carpenters—(1) Pigott Healy Construction Co., Hamilton; (2) Carswell Construction Co., Toronto; (3) Cook & Leitch, Montreal.

Stonecutters (Special)—George Oakley & Son, Toronto.

Officers for 1926

Officers for 1926 were elected as follows:—

President—C. Blake Jackson, Toronto.

Vice-President—Harry J. Mero, Walkerville.

Western Vice-President—H. J. A. Bird, Moose Jaw.

Eastern Vice-President—E. G. M. Cape, Montreal.

Honourary Secretary—George A. Crain, Ottawa.

Honourary Treasurer—Frank E. Waterman, Toronto.

Representative of Manufacturing and Supply Section—H. J. Stambough, Hamilton.

Representative of Trade Contractors—Geo. Oakley, Toronto.

Representative of General Contractors—H. P. Frid, Hamilton.

Past President—John V. Gray, Toronto.

Executive Secretary—J. Clark Reilly, Ottawa.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

THE notes in this section of the LABOUR GAZETTE relate to the work carried on by secondary vocational schools which receive federal grants under the provisions of the Dominion Technical Education Act. Other activities which have a direct bearing on the training of apprentices and industrial workers are also noted. The Dominion Government, through annual grants administered by the Technical Education Branch of the Department of Labour, assists the provinces in developing all forms of vocational education and industrial training which are of benefit to workers in various branches of industrial, commercial and home-making activities.

Technical Education in Nova Scotia

The following article by Dr. F. H. Sexton, principal of the Nova Scotia Technical College, Halifax, appeared in the *Halifax Chronicle* of January 1, 1926:—

Technical education is built upon a basis of general education and the former must always be supplementary to the latter. Some enthusiasts would begin with the child when it is even ten or twelve years of age to train it toward its vocation, and national systems have been built on this basis. It seems that every effort should be made to train the child on the broadest lines up to the age of fourteen so that he will have some grounding in culture and citizenship and then have a great number of courses provided for training all youths for thorough efficiency in the honourable occupation for which they are fitted. This is the proper field for technical education and there should be provision for this kind of training for all the people working at all kinds of work as long as they need organized instruction to make them more effective in their occupations.

Nova Scotia was one of the pioneers of North America in this field and has accomplished much, but other provinces of Canada, especially Ontario and Quebec, have forged ahead of her to very advanced positions in this new branch of educational effort, while some of the states in the United States have even out-distanced any other parts of the world in provisions for industrial training. The policy of Nova Scotia has been to provide the fullest opportunity in this field so that the son of any farmer, miner, fisherman, or merchant, or mechanic, with ability for applied science could secure the highest type of college training. This work has been done worthily as is attested by the high responsibilities which its graduates are discharging satisfactorily here and in many other parts of the world. The experts of the Carnegie Foundation reported after investigation that the College was doing its work adequately, and no higher authority could be secured.

The College has developed a unique type of education in its short courses which are held the first three months of each year in a wide variety of technical subjects. These courses are given in architectural drafting, advanced automobile repairing, land surveying, electrical

machinery, stationary engineering, marine engineering, machine design, technical chemical analysis, etc. These are all aimed to help the man in industry who had to leave school at an early age and later finds his way to promotion blocked by a lack of technical knowledge. The fee for any one of these three-months courses is only $15, so that they may be taken advantage of by any ambitious worker. These have been in existence for about ten years, and the graduates, now spread far and wide, have developed to a surprising and satisfactory degree. The success of some of them has been phenomenal and attests markedly to the value of technical education, even though it is only an abbreviated course.

The College also has attempted to carrry technical education to every home in the province, by a comprehensive system of correspondence study instruction. These courses go wherever the mails travel, even to the light-house keepers. Over 100 different courses are now offered and the cost of each is so low that it is brought within the reach of everybody. The instruction is on a thoroughly educational basis and particular attention is given to each individual, perhaps more than he could get in a class under a teacher. There are over 800 ambitious men and women following these courses and preparing themselves to carry on their daily work more effectively or trying to fit themselves for another occupation where they can achieve more success. The cost of these courses is very low—from $3 to $15 each—a trifling amount compared with that charged by institutions which are conducted commercially for a profit.

Then there is the widespread service of the evening technical and coal mining schools in all the industrial centres of the province. Classes of this nature are organized in twenty-three towns and cities of the province. Last year over 3,000 students took advantage of these opportunities. This branch of technical education has been deservedly popular because the training is thus carried directly to the door of the worker. He does not have to lose an hour's wages and can take a part of his spare time to continuously improve himself. In the various towns over thirty different subjects are offered and include instruction in technical and commercial subjects as well as home economy. Thousands of our people have been trained in the past and there are many who depend on these classes as the main opportunity to develop their intelligence and talents for earning a satisfactory living.

All these provisions seem to be broad enough to cover the ground, but there are still many other extensions which should be made if Nova Scotia is to prepare her people so that they may possess the knowledge and ability to develop our natural wealth that lies so profusely around them. Other provinces have found it to their advantage to introduce technical courses into the high schools so that those boys and girls who are not going to college could get some definite training to fit them for business life and the trades. When one considers that nine-tenths of the students never go to college, but finish their education and go directly to various jobs, it seems that some definite provisions in the way of vocational training should be made in our higher grades. These should be as complete and of as high an order as those which are now carried on for general, cultural and college preparatory courses. Our neighbouring province of New Brunswick has made some great strides in this direction lately, and is now building a large new school in the city of St. John, costing nearly $500,000, which will be devoted to technical training solely.

Then there should be provisions made for education of the youth just as he goes into industry. This is a very critical time and many boys and girls flop aimlessly about for a number of years, chasing from one job to another, with the result that they get into blind-alley occupations, lose grip on the knowledge they did pick up at school, and acquire habits of instability and shiftlessness that spoil their whole lives. The most modern method of helping these young workers that has been widely applied in Ontario and the United States for the last five or six years is to require them to attend school from four to eight hours a week during working time, where they are given definite instructions up to the ages of 16 or 18, and thus provided with definite help and adjustment in this great task of earning a living. The school also provides vocational guidance and placement for the youthful boy or girl in order to find the proper niche in practical life for each one, where he or she can find full scope for particular talents. Thus is prevented one of the greatest wastes of human effort—that of trying to find the job best fitted for each person.

For more than a quarter of a century intense efforts have been put forth to educate the farmer for his work in every way possible. The efforts have borne rich fruit and the industry has been advanced prodigiously mainly by these provisions. Hardly anyone could deny the great benefits that have accrued in this province from the efficient, long-continued efforts emanating from the Agricultural College in Truro. Similar provisions for the workers in other industries would also bring forth

similar results. The greatest fishing grounds in the world lie just off our coast. The men who follow this hazardous calling usually conduct their calling on much the same individual basis as the farmer. That is, they own their own boats and gear and have a full or scanty larder, depending on the fortune that attends the effort of each individual. Education, research, and training must be organized and developed for these hardy people as well as for the farmer, if we are to secure full advantages from the great ocean wealth. New or improved methods of catching, curing, and marketing fish must be developed and this is impossible unless all the members of the industry are as carefully trained for their occupations as are the workers in agriculture to-day.

Nova Scotia should also extend the technical training of its workers in the other multitude of industries that are established and those for which there is an excellent opportunity for development. Capital is necessary for any enterprise, but a more important factor is capable, intelligent, satisfied labour. Our people are blessed with all the necessary native intelligence that any one could ask. All that it needs is to acquire knowledge, to be trained how. The questions of unemployment, living wage, bondage of capitalism, shop control of industry, labour's share of product and many others that surge through society to-day can be largely settled through persistent and adequate education. Our greatest wealth is in the development resources of mental ability in our people. If this is adequately developed through technical education, then the question of utilizing our natural and material wealth, so bountiful provided by nature, will proceed hand in hand with the growth of power of the people themselves.

St. Thomas Vocational School

The new vocational school at St. Thomas is nearing completion and will be officially opened this summer. This building was erected at a cost of $240,000 with an additional $50,000 for the furnishings. The autumn classes of 1926 will be first to occupy the building. While the new school is declared to be the finest of its type in the province, the cost of erecting it is said to be $100,000 less than that paid for similar schools in other centres. It is located about five minutes' walk from the centre of the town, the location being ideal and convenient to all parts of the city. The school is modern in every detail, containing 27 classrooms, a large gymnasium, auditorium, etc. The auditorium will be used as a community hall. It has seating capacity for between 800 and 900 people.

Vocational Education in the Border Cities of Ontario

The following extracts are taken from an article by George Courtenay, secretary of the Windsor-Walkerville Technical School, appearing in *The Windsor Star* of December 31, 1925:—

In Ontario now there are 20 schools where vocational training is given; some are what is known as the composite school, embracing both matriculation and technical courses, while others are like the Windsor-Walkerville Technical school, purely vocational. All are apparently meeting the requirements in their own particular locality, and there is provided in this way an educational system which cannot fail to supply the means of giving the Canadian boys and girls a training which will equip them efficiently for the battle of life, and, at the same time, make them a credit to the Dominion of Canada.

Not the least outstanding of the vocational schools is our own technical institute. Opened only a little over two years ago, we are told by teachers who come here from other places that it enjoys a reputation of high attainments, particularly in the minds of men in college positions. It is, we feel, entitled to that rating in view of what it is doing for the boys and girls of the Border Cities and Essex County.

While there is a constant demand for the girls of the commercial department to fill positions in offices in the Border Cities and adjacent municipalities, the Ford Motor Co. of Canada, right at our doors, has provided a remarkably attractive outlet for the boys in the mechanical courses. The Ford Company, as is generally known, has arranged to give employment, as apprentices, to a certain number on completing their three-year course at school. This has proved an unusually popular provision in connection with the school, and will doubtless give many a boy a start on a career which will make him a worthy citizen and a real asset to the community in which he lives.

That our technical school has it place in the local arrangement of educational facilities is evidenced by the continuously growing enrolment. For the month of November, Prisipal W. D. Lowe, M.A., reported the attendance as follows:—

	Girls	Boys	Total
Commercial department...	381	90	471
Technical..	45	309	354
Totals..	426	399	825

In the evening classes there are 984 enrolled, as follows:—

Arithmetic and English..	68
Auto mechanics..	68
Bookkeeping..	59
Card writing..	18
Cabinet and patternmaking..	11
Carpentry..	22
Cooking..	46
Drafting (architectural)..	29
Drafting (mechanical)..	30
Dressmaking..	90
Electricity..	41
English for beginners..	128
French by conversation..	14
Lip reading..	7
Machine shop..	141
Mathematics..	14
Millinery..	41
Plumbing..	20
Real estate..	14
Shorthand and typing..	123
	984

The enrolment is somewhat smaller than a year ago, accounted for in the fact that the fee was raised this year on a suggestion to make the classes self-

supporting and thus assist in an effort on the part of the City Council to keep the tax rate down. As will be observed from the list of classes, that of English for beginners (new Canadians) is one of the heaviest in the matter of enrolment. In it are men and women from many distant lands beyond the Atlantic. They make admirable pupils, all intensely eager to get a grasp of the English tongue, because of their aim to make Canada their future homeland.

There are also other evening classes in the city, and we should like to say a word or two about them, namely, the matriculation classes of the Windsor Collegiate Institute, under the direction of A. G. Hooper, M.A., principal of the school. In these classes, provided for those who work during the day, some of the pupils are preparing for entrance to college, some to become druggists, physicians and other professional callings, while some are teachers who wish to equip themselves with certificates of higher standing than those which they now possess.

The classes are a praiseworthy feature of the local educational system, and the Windsor Board of Education is to be commended for providing them.

Generally speaking, as we observed in the beginning, the people of the Border Cities are fortunate in having the educational facilities with which they are surrounded. For these they can express no small measure of gratitude to the Border Cities Star, for without its sympathetic co-operation the school authorities might not have been able to make the progress which they have been pleased to make, in the belief that they were doing what was incumbent upon them for the good of the community.

United States National Committee on Research in Secondary Education

Mr. J. B. Edmonton, Professor of Secondary Education, University of Michigan, in an article appearing in *School Life* for December, 1925, states that the most far-reaching combination of educational organizations engaging in research in the field of secondary education yet set up in the United States has been effected through successful organization of the National Committee on Research in Secondary Education. The following organizations have official representation on this committee:—

United States Bureau of Education, National Education Association, National Association of Secondary School Principals, National Society of College Teachers of Education, National Association of High School Inspectors and Supervisors, National Association of Collegiate Registrars, Educational Research Association, Southern Association of Colleges and Secondary Schools, North Central Association of Colleges and Secondary Schools, Northwest Association of Secondary and Higher Schools, Association of Colleges and Preparatory Schools of the Middle States and Maryland.

The purposes of the committee are stated as follows: (1) To arouse those engaged in the field of secondary education to a consciousness of the need for research and to stimulate them to purposeful research activities in this field. (2) To initiate investigations bearing upon secondary school problems. (3) To advise and aid in investigations initiated by other agencies. (4) To co-ordinate research activities carried on by agencies interested in secondary education. (5) To act as a clearing house of information and results pertaining to research in secondary education.

Industrial Peace Plan in British Shipbuilding Industry

The Shipbuilding Employers' Federation and the Federation of Engineering and Shipbuilding Trades of Great Britain have agreed upon a plan for the settlement of labour disputes.

When a dispute arises in regard to any matter other than wages, the employers will meet a workman or deputation of workmen in the yard or place of employment. This is to be done within two days after a request has been made, and if the meeting does not result in a settlement, a further conference is to take place within three days between the employer and the official delegate or other official of the workmen concerned. Failing a settlement at this conference the matter may then be submitted to representatives of the employers' local association and the local officials of the unions concerned. A matter of general interest, affecting more than one yard, may be considered in local conference by direct conference within ten days of a request for such action. If a dispute survives all these efforts at settlement, either side may have it submitted to a central conference, and if no conclusion is reached at such conference, the matter may be referred to arbitration, by mutual consent, or it may be submitted for final settlement to a general meeting between the Employers' Federation and the union or unions interested.

Piece-work wage disputes are to be dealt with by special machinery; they are to be settled, whenever possible, in the yards or docks where they arise, in accordance with the procedure already outlined, but if the first step is unsuccessful, the matter is to be brought before a joint committee of three employers and three union representatives who are not to be connected with the yard or dock in which the trouble has arisen. This is to be done within three days, and if no settlement is reached, further references may be made as in non-wage controversies. It is claimed for the plan that it provides a means for ventilating grievances rapidly and for settling disputes expeditiously whenever and wherever settlement by direct conference is possible.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

"No Accident" Year at Port Colborne Cement Plant

On January 7 the Port Colborne plant of the Canada Cement Company held a banquet to celebrate the attainment of their goal of making 1925 a "no accident year." The clean record extended beyond the year, no accident having occurred in the company's "Number 8" plant for fifteen months up to January 1, 1926. The proceedings at the banquet are recorded in the plant magazine *Plantate News*.

Mr. Frank P. Jones, president and general manager of the Canada Cement Company, complimented the staff on their fine work. The company encouraged accident prevention work at all the plants, and the number of accidents had dropped steadily, having been 197 in 1921, 76 in 1922, 63 in 1923, 38 in 1924, and 37 in 1925 in all plants. He stated that at present twenty per cent of the stock of the Canada Cement Company is held by the employees and he hoped to see the day when a majority of the stock would be held by the employees.

Mr. H. G. Jacobsen, manager of the Bureau of Accident Prevention and Insurance of the Portland Cement Association said that in June, 1925, "we decided to make a campaign to have a pre-determined month set aside as a "No-accident" month for the whole Cement Industry in Canada and the United States. Many were dubious of the outcome and one gentleman wrote and said "It is impossible." We went ahead, however, and set aside the month of June as the month in question and 72 out of the 125 operating cement plants on the continent came sucessfully through the month. Needless to say, your plant was one of these. It is not a question of the perfect condition of a plant alone, but of the men. If the men get the right idea of safety work, the machinery will take care of itself."

Mr. R. B. Morley, manager of the Industrial Accident Prevention Associations of Ontario spoke of the importance of prevention work. "During the last eleven years." he said, "there were 502,014 accidents reported to us, of which 4,328 were fatal. In that time there was paid out as compensation the huge sum of $51,000,000 or an average of over $100 for each accident. Last year alone, there were 60,012 accidents reported to the Workmen's Compensation Board, of which 345 were deaths and Plant No. 8 was not on that list. In 4,018 days there were 4,300 death cases, or over 1 a day. In fact, to put it in rather a brutal manner, the "blood cost" of manufacturing an article was an item to be seriously reckoned with. Your plant has eliminated the "blood cost" from your cement."

"No Accident" Record of Chatham Harvester Factory

Mr. George Hodge, of the International Harvester Company, in an address to the fourth annual Mid-West Safety Conference of the American Society of Safety Engineers and the Chicago Safety Council, asserted that accidents can be prevented in industrial occupations generally considered by insurance companies as hazardous.

"There has not been an accident in the works of the International Harvester Company at Chatham, Ontario, in two years," he said, "as a result of the educational non-accident campaign conducted along lines recommended by the National Safety Council."

"The Safest Mill in Canada"

The *Pulp and Paper Magazine of Canada*, the valuable weekly magazine published at Gardenvale, Quebec, is offering two trophies for "the Safest Mill in Canada." In announcing this competition, it says:—

"One of the regrettable points in the safety situation in Canada is the more or less haphazard manner in which the work is being carried on in some of the provinces, and the attitude that still obtains in some mills of doing only what the law requires, even in some cases waiting until the law requires it. A more spontaneous and general introduction of safety work and safety methods, would save a great deal of unnecessary sickness and suffering and it would also be of economic advantage to the whole industry.

"There is as yet no dominion-wide organization of safety work in the paper industry, the basis of which is necessarily a uniform system of reporting accidents. The beginning of such a system may possibly be started through the reports that will be submitted in connection with our contest. In any case, there will be the unquestioned advantage of an increased interest throughout the Dominion in striving to accomplish a very worth-while object."

The two trophies now offered for competition are two challenge shields, one for the best record in mills in "Group A," comprising those having payroll-hours of 60,000 per month and up, and the other for mills in "Group B" comprising all other mills.

The period of contest will be the six months from March 1 to September 1, 1926.

All accidents involving loss of time beyond the shift in which the accident occurred to be taken into consideration in making up records. New construction, woods operations or townsite accidents to be excluded, making the competition a straight contest between operating mills.

Copies of all reports of accidents to be sent immediately to Mr. A. P. Costigane, 811 Federal Building, Toronto, Ontario, who will be responsible for the compiling of records.

A monthly statement showing the total number of employees (including office staff, superintendents and foremen) and total number of payroll hours (payroll hours to be based on straight time where overtime is worked) all to be sent promptly to Mr. Costigane.

Each competing mill will be put on its honour to report all accidents. Care should be taken to see that no accident is omitted.

Severity rate will be based on percentage per 1,000 hours exposure to hazard. Lost time continuing after terminating day of contest to be estimated by the doctor in charge of the case. Such estimation to be accepted by other contestants and to be included in lost time.

Frequency will be computed on the basis of accidents per 100 men employed.

In the event of any dispute as to the winners the decision of Mr. A. E. Cadman, 701 Drummond Building, Montreal, is to be accepted by all competitors as final. "New construction" is understood to include all work in connection with the building of a new mill, or new buildings in connection with an existing mill, and the installing of new machinery therein, but does not include repairs, changeovers, replacements, or the moving of existing machinery or material.

Plan for Reducing Accidents in Forest Industries

Mr. Alexander R. White, chief sanitary inspector of Ontario, in a paper read before the Paper and Pulp section at the recent fourteenth annual Safety Congress, made some recommendations for the reduction of the accident rate in the forest production industries. His proposals were as follows:—

1. The establishment of first aid facilities at every camp, irrespective of size, or the number of men employed.

2. The industrial physician associated with each camp, is to agree to teach the camp clerk the practice of first aid to the injured (with special emphasis upon the proper sterilization of open wounds), the splinting of broken bones, proper methods of stopping excessive blood flow, and resuscitation. He shall also teach, by practical demonstration, the kinds of cases which may be treated in camp and those which should immediately be sent out for hospital treatment. I am stressing this last item particularly as I find that there are a great number of cases sent to the hospital which could be better dealt with at a camp and a man remain at light work.

3. The foreman in each camp is to be responsible for directing the injured man to the first aid officer as soon after the accident as possible, and shall further attempt to fix responsibility for the accident.

4. The woods boss or manager is to oversee the work of both first aid officer and foreman and is to report to the safety engineer or to the Association, any failure on the part of this machine to function at 100 per cent efficiency. Steps will then be taken to probe the situation and apply a proper remedy. The clerk who, under this plan, is also to be the first aid officer, as you will note, is to be subject to discipline in the same manner for failure to perform his new duties as if he neglected his regular work of book-keeping or other duties.

5. The industrial physician who enters into a contract annually with the company, is to agree to take an interest in accident prevention, and is further to do all in his power to hasten the return to work of all men who may be injured, consistent with good service.

Twelve Years of Accident Prevention

A slight downward trend in the industrial death rate during the period 1912 to 1924 is shown in a chart prepared by the Metropolitan Life Insurance Company and published in the Company's *Statistical Bulletin*. The decline is shown by an analysis of the records of industrial accident, to white males of 15 years of age or over. The decrease amounted to about one per cent per annum for the period. The death rate from machinery accidents in industry declined at the rate of about one-half of one per cent per year. The *Bulletin*, commenting on these records says: "Much interest attaches to the experience of the past decade for industrial accidents. The country-wide development of workmen's compensation insurance, the accompanying development of industrial safety work, the rise of industrial medicine and surgery, have all taken place practically within this period. Attention has been directed, as never before, to the incidence of serious accidents in in-

dustry and to their prevention. Commendable and demonstrable progress has been made in certain industries in the control of industrial accidents. Where uniform and dependable records have been available, it has been shown that life and limb can be safeguarded by protective measures adopted after a careful study of plant hazards.

"The increase in accidents in any given year may be due to increased industrial activity in times of boom and expansion. Men in industry, working under stress for maximum production, do not exercise the thought and care that would be used in slack time. The fluctuation in the number of men employed, as well as the intensity of industrial activity, also definitely influences the industrial accident rate. The general trend of accidents in industry is affected by the introduction of labour saving devices, that is, by the substitution of mechanical for manual processes. Little attention has been given to this latter factor in industrial studies."

Explosives Regulated at Montreal

A city bylaw is under consideration at Montreal to regulate the firing of dynamite and other explosive charges in the city quarries and in all construction operations. The proposed regulations specifically set the limits for explosive charges of various kinds which may be placed in a blast, and contain explicit instructions as to the methods and precautions to be used. The bylaw further states the quantities of blasting powder, dynamite, fuses, caps, and other explosives that may be kept or transported in the city limits, and gives detailed regulations as to permits, safety methods, etc.

FACTORS IN ORGANIZING FOR FUTURE ACCIDENT PREVENTION

AN Address on Factors in organizing for Future Accident Prevention was delivered before the American Association for Labour Legislation, at New York on December 30, by Mr. Richard H. Lansburgh, secretary of Labour and industry of the Commonwealth of Pennsylvania.

Importance of Sound Statistics

Sound methods of statistical presentation, he said will form the basis for accident reduction organization within the next ten years. Statistics will be helpful not only in adequately presenting exposure, but in presenting accident cause. The efforts of the United States Bureau of Labour Statistics to have State departments develop standard methods of analysing accident data are just beginning to bear fruit. Great strides have been made in the last year in Illinois, and Ohio, and we have a definite program on foot in Pennsylvania to better our methods of statistical presentation which we feel are already among the best. Given cause analyses of accidents, all of those organized for accident prevention have real targets at which to aim. Half of our safety efforts have been misdirected for lack of such targets.

Safety Education

The realization of the extent to which accidents and particularly serious accidents are caused by factors over which employees have control cannot be reached until methods of statistical presentation are such as to clearly indicate this condition. In the opinion of the Pennsylvania Department of Labour and industry, each year a larger percentage of industrial accidents are preventable only by safety education of the worker. Safety education, as has just been shown, to be effective must include all phases of safety, particularly highway safety as well as industrial safety. Any educational program must be directed toward making a hero of the man who is safe rather than of the man who is successfully reckless.

ACCIDENTS IN THE BUILDING AND CONTRACTING INDUSTRY REPORTED TO THE PENNSYLVANIA BUREAU OF WORKMEN'S COMPENSATION DURING THE YEAR 1925.

Cause	Fatal	Non-Fatal
Machinery	7	850
Boilers	.....	6
Pumps, compressors and prime movers	4	115
Transmission	1	9
Elevators	3	113
Cranes and derricks	19	918
Cars and engines	19	380
Motor vehicles	25	622
Horse vehicles	1	139
Hand trucks	.....	393
Water craft	4	45
Handling objects	5	4,452
Hand tools	4	1,996
Electricity	18	46
Explosives and explosions	9	132
Hot and corrosive substances	5	723
Falling objects	33	2,280
Falling objects (mines and quarries)	.....	11
Fall of persons	71	3,706
Stepping upon or striking against objects	3	2,434
Miscellaneous causes	16	638
Total	247	20,008

Definite Organization

One of the chief means of organizing for future accident prevention must be to correlate closely the activities of all those who are now working more or less separately toward the same end. Some individual industries are correlated more or less through the National Safety Council. But the efforts of the National Safety Council have not been entirely co-ordinated with those of the various State Departments or with those of the American Association for Labour Legislation. Industry, the National Safety Council, State and Federal government, the American Engineering Standards Committee, the American Association for Labour Legislation, and all other agencies must co-operate and correlate their efforts. We feel in Pennsylvania that we have made some progress within the last year toward such correlation and will make more progress shortly. We are closely allied with the National Safety Council and with the American Engineering Standards Committee work as well as with the various local safety councils throughout the State. We are interested in the development of new local safety councils and we are definitely engaged in safety programs in co-operation with individual industries.

Profession of Factory Inspector

No such program of co-operation can be developed unless State factory inspection work is placed upon a professional basis. The professionalization of factory inspectors offers one of the real opportunities for accident reduction. We have it placed upon such a basis in Pennsylvania and expect that it will remain so. The new Director of our Bureau of Inspection is a trained engineer who was a safety engineer before coming with the Department five years ago and who since then has been in charge of the development of all safety codes and other regulations of the Department. We have under his direction seven division supervizing inspectors located throughout the State to whom the factory inspectors report directly. On these supervisors the success of our operations largely depends. We have replaced the supervizing inspectors in those divisions in three instances with highly trained men, two of whom are engineers. The other supervisors who remain are equally competent men. We have, in the past year, appointed about twenty new inspectors within the Department, each one of whom is either a college graduate, generally in engineering, or who has had long experience in manufacturing industry.

These changes, together with definite steps which have been taken to further educate the members of the factory inspection force who have been retained by us, have placed this force on a one hundred per cent professional basis. They can take analyzed causes of accidents into their districts and reduce hazards.

Safety Engineers

In addition to this, when we desired to find the successor to the present Director of the Bureau of Inspection, in the development of codes, we went to the National Safety Council in Chicago, and secured a safety engineer of long experience who will take up his duties as Director of the Bureau of Industrial Standards of our Department on the first of January. Such an organization merits and secures the confidence of employers, employees, and all others working for safety in the State of Pennsylvania and makes possible real co-operation between the State Department and others interested in safety within the State.

Uniform Safety Codes

Another factor offering the most promise in organizing for future accident prevention is the progress which has been made in the development of uniform safety codes through the American Engineering Standards Committee and the adoption of such codes by the various states. Of course, I feel that it is fundamental that these national codes be subjected to criticism from the various states prior to their adoption if they are to be enforceable within the State after promulgation. It is fundamental that any safety code which does not have the co-operation of a reasonable number of employers in industry will be unenforceable or very difficult of enforcement. Therefore, national codes, to be adopted by states, must secure the approval of the employers within the state prior to passing the national body, just as codes developed within a state must receive such approval. Arrangements have been made by the National Engineering Standards Committee for such prior approval and I feel that with this assured, more of the leading industrial states can adopt the national safety code program as the foundation of their own program and that the uniformity which will result will mean much for reducing accidents. This is particularly true because it will mean that much machinery, heretofore unguarded, will be guarded at the time of manufacture. Not only in the development of national safety codes is progress being made in safety code development. For instance, in Pennsylvania our Bureau of Industrial Stan-

dards has charge of an enlarged safety code program for our State. Textile industries, quarries, mines, other than coal, are now subject to specific codes for the first time, and important changes have been made or are being made in a large number of codes governing other specific industries such as woodworking, and metal press work. In Ohio a new organization has been created by the Industrial Commission which will make similar researches. There must be an extension of this type of effort within the next ten years and the sound basis of rules which is secured from such research when applied through professionalized inspection must make for accident prevention.

In definite organization lies the possibility for accident prevention. Those factors which I have mentioned seem to offer the most immediate promise for organization for accident prevention. We cannot wish away the tendency toward increase in industrial accidents. We can organize co-operatively to reduce them. That is our task.

ARE ACCIDENTS INCREASING?—THE ACCIDENT RECORD

Mr. Leonard W. Hatch, Director of the Bureau of Statistics and Information in the New York State Department of Labour, in a paper read before the American Association for Labour Legislation at the convention held at New York on December 30, discussed existing accident records for the purpose of determining whether or not there is evidence of a real increase in the number of industrial accidents.*

The query was started, he said, by the indisputable fact of an increase in the number of accidents reported to the public authorities in 1923 and 1924. In New York State that increase was as follows: starting in the years ended June 30, 1920-21 and 1921-22, with just about the same numbers of reported accidents for two years (294,469 and 293,844), the number for the next year was 346,845 an increase of 53,001 and for 1923-24 was 371,708 or a further increase of 24,863. In other words, in two years the number of reported accidents had increased 26 per cent. This refers to all accidents. A very much larger increase occurred for fatal accidents. From a total of 1,177 reported fatalities in 1920-21 and approximately the same number in 1921-22, the number of reported fatalities rose to 1,665 in 1922-23 and to 1,927 in 1923-24, or an increase of over 60 per cent in two years.

After a discussion of existing accident statistics, with particular reference to the need for fuller records of employment data showing the extent of the employees' exposure to risk at a given period, Mr. Hatch proceeded:—

Accidents in Manufacture

Let me give you some view of the course of accidents in New York State in the last two years, coming nearer down to date than with the figures above, not in this instance for all industries and all accidents but for fatalities in the field of manufacturing, about which more complete data for present purposes are available. In confining attention to manufacturing we shall be covering the largest single field of industry in the state and the one in which occur 45 per cent of all compensated accidents, and about one-third of all fatal accidents. Fatalities represent, of course, the most serious type of injuries.[1]

A review of reported fatal accidents in 1924 and 1925 shows the following course of a five-months' moving average.[2]

REPORTED FATALITIES IN MANUFACTURING IN NEW YORK STATE

Five months with middle month in—	Reported fatalities	Five months with middle month in—	Reported fatalities
December, 1923...	52	January, 1925.....	44
January, 1924.....	56	February, 1925.....	46
February, 1924....	53	March, 1925.....	47
March, 1924.....	53	April, 1925.....	49
April, 1924.....	55	May, 1925.....	49
May, 1924.....	53	June, 1925.....	49
June, 1924.....	46	July, 1925.....	48
July, 1924.....	44	August, 1925.....	48
August, 1924.....	42		
September, 1924..	38		
October, 1924....	39		
November, 1924..	42		
December, 1924...	44		

These figures answer the question of whether industrial accidents are increasing thus: Fatal accidents in manufacturing declined in number quite steadily from the beginning of 1924 through that year until fall; then they rose steadily until the spring of 1925 but not to as

*This subject was discussed from another side in a paper appearing in the last issue of the LABOUR GAZETTE, by Mr. Ethelbert Stewart, United States Commissioner of Labour Statistics.

(1) The data here used are those for reported fatalities and course of factory employment published in the monthly Industrial Bulletin of the New York State Department of Labour.

(2) The moving average eliminates or reduces erratic variations from month to month. There is no reason believe that degree of reporting varied in this period.

high a number as in the early part of 1924, and from spring until fall of this year have remained at about the same level.

Here again it is necessary to take account of the employment element and observe the course of fatal accident occurrence in relation to the course of employment. The first thing that such a comparison shows is that the up and down of fatal accidents was the natural accompanyment of an up and down of employment the two corresponding closely in direction and duration. That is, employment during 1924 was declining until fall, then it rose until the spring of this year where it has remained nearly the same subsequently but not as high as in the early part of last year. The following employment indexes bring this out:—

INDEX OF EMPLOYMENT IN NEW YORK FACTORIES

Five months with middle month in—	Employment index	Five months with middle month in—	Employment index
December, 1923...	100	January, 1925.....	92
January, 1924.....	99	February, 1925.....	92
February, 1924....	98	March, 1925.....	93
March, 1924.....	97	April, 1925.....	92
April, 1924.....	95	May, 1925.....	92
May, 1924.....	93	June, 1925.....	91
June, 1924.....	91	July, 1925.....	92
July, 1924.....	89	August, 1925.....	91
August, 1924.....	89		
September, 1924..	89		
October, 1924.....	90		
November, 1924..	91		
December, 1924...	92		

In this case we can go on to answer the final question of whether fatalities declined and then increased faster than employment or not. By means of the employment index dependable estimates of number of employees in factories each month are available and with these as a base reported fatality rates per 100,000 employees may be computed. Such rates, using as before moving averages for five months, are as follows:—

REPORTED INDUSTRIAL FATALITIES PER 100,000 EMPLOYEES IN NEW YORK FACTORIES

Five months with middle month in—	Per 100,000 employees	Five months with middle month in—	Per 100,000 employees
December, 1923...	4·55	January, 1925.....	4·20
January, 1924.....	4·94	February, 1925.....	4·39
February, 1924....	4·73	March, 1925.....	4·44
March, 1924.....	4·77	April, 1925.....	4·68
April, 1924.....	5·05	May, 1925.....	4·68
May, 1924.....	5·01	June, 1925.....	4·73
June, 1924.....	4·44	July, 1925.....	4·63
July, 1924.....	4·33	August, 1925.....	4·63
August, 1924.....	4·13		
September, 1924..	3·74		
October, 1924.....	3·80		
November, 1924..	4·05		
December, 1924...	4·20		

If fatalities and employment had declined and increased at the same rate the above numbers would, of course, have remained the same. But what we find is that the number of reported fatalities per 100,000 employees declined when employment went down and then increased when employment went up. In other words, it appears in striking fashion that the reported fatality rate goes up when employment is increasing and declines when employment is decreasing.

I have previously emphasized that increase or decrease in number of accidents with employment is entirely normal. It is now to be noted that increase or decrease of accidents faster than employment is also normal; in other words, the course of reported fatalities in relation to the course of employment in factories just traced for 1924 and 1925 was quite to be expected. The normality of this result under changing employment conditions I predicate with more confidence because it corresponds with results which have been brought out in much better data, the best public accident statistics in this country so far in fact, of the U.S. Bureau of Labour Statistics for the iron and steel industry.

Lesson for Safety Movement

But why is an acceleration of the accident rate under increasing employment to be expected? In the answer to this is to be found a very important lesson for the safety movement, in fact, I believe the most important general lesson for guidance of industrial accident prevention at the present time.

There are two elements in accidents causation, the mechanical and the human. Accident prevention deals with the former by means of mechanical safeguards and safety engineering, with the latter by the teaching of good housekeeping and safe conduct. Between these two processes there is a wide difference in the stability of the ground which is gained by safety efforts. To protect a machine by guards is not an extended process and once done the machine stays safe so far as the purely mechanical element is concerned. But teaching good housekeeping and safe conduct in workplaces is a slow process of education, both of workers and supervising authorities, and the results "stay put" only under continuous maintenance of teaching and morale of old employees while with the advent of new employees the whole slow process has largely to be built again from the bottom as it were. Furthermore, increase of force occurs for expansion of production and is likely, therefore, to be accompanied by greater absorption of

management, which in the last analysis sets the pace for safety, in production. Finally, in the larger swings of business activity and employment there is the element also of the new undertakings which are started. In these, particularly, the human element in accident causation is likely to be overlooked entirely at first. The mechanical element receives much prompter attention either because of early state or insurance company inspection, or because new machinery and equipment is to-day constructed more safely than ever before.

Accidents naturally increase faster than employment, therefore, because increase in working forces brings an increase of hazard growing out of the human element in accident causation. I shall not stop to point out how the same general point is revealed in the reasons for the similar phenomenon which occurs in the relation of accidents to employment when the latter falls.

The moral, therefore, to be drawn from all this and from the observed and natural up and down of accident occurrence with rise and fall in employment is that the problem of producing a general level of safety conditions in industry high enough to prevent the rather paradoxical phenomenon of an increase in industrial accident hazards in times of rising business prosperity is mainly a problem of safety education rather than of mechanical safeguarding.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Ratifications of Draft Conventions

The total number of ratifications of Draft Conventions of the International Labour Conference which had been registered with the League of Nations up to the end of the year was 185, as compared with 179 in October. In addition thereto 37 ratifications have been authorized by various governments but the formal procedure in connection therewith had not been completed at the end of the year. Further ratifications to the number of 123 have been recommended by government authorities to the competent legislative bodies.

Eighth and Ninth Sessions of the International Labour Conference

The date of opening of the Eighth Session of the International Labour Conference, which was provisionally fixed by the Governing Body last fall, has now been definitely settled after consultation with the International Institute of Agriculture. The Eighth Session will open on May 26 and the Ninth Session, which is to deal with matters affecting seamen, on June 7.

Family Budgets

The International Labour Office is carrying out a study on the question of family budgets which will be completed very shortly. A conference of labour statisticians which was held at the International Labour Office last year requested the governments of the various countries connected with the International Labour Organization to make further inquiries into family budgets in the near future so that a new series of cost-of-living index numbers on a uniform base in all countries could be calculated as from 1930. This subject will probably be considered at a further conference of labour statisticians.

Collective Agreements

As regards collective agreements, the daily work of the International Labour Office has led to the conclusion that regular and properly co-ordinated statistics would be of the greatest value. Statistics of this kind are very little developed in most countries and no really scientific method for the collection and compilation of the information has yet been adopted. It has been suggested that the International Labour Office would do good service to the Member States of the International Labour Organization by drawing attention to the importance of this branch of statistics and preparing the way for an international agreement on the methods to be adopted.

A Conference of Labour Statistics

It has been suggested that a further conference on labour statistics should be held in the International Labour Office in Geneva either in October, 1926, immediately after the assembly of the League of Nations, or in April, 1927, a few weeks before the annual session of the International Labour Conference.

Freedom of Association

The International Labour Office has been engaged for some time past on the preparation of the volume of information dealing with freedom of association in various countries. It is expected that the same will be completed in time for publication early in the present year.

Bibliography on Unemployment

A bibliography on unemployment has been prepared by the International Labour Office and is being printed for general information.

Great Britain and Conference Decisions

The authentic texts of the Draft Conventions and Recommendations adopted by the Seventh Session of the International Labour Conference were formally presented in the British House of Commons on November 23, 1925. On November 19, the Home Secretary, in a written answer to a question, replied that, for the reasons stated in the report by the British Government delegates to the Seventh Session of the International Labour Conference, and in his reply to a question on July 2, 1925, His Majesty's Government did not intend to take any steps towards the ratification of the Draft Convention concerning the prohibition of night work in bakeries. The Home Secretary also stated on November 23, in a written answer, that it was not proposed to introduce legislation on the subject of the weekly rest in glass works. The Lead Paint (Protection against Poisoning) Bill was withdrawn December 8, 1925.

Workers' Organizations

The International Labour Office has issued a publication entitled "Workers' Organizations" which comprises a new edition in modified and enlarged form of the part of the International Labour Directory devoted to workers' organizations. The information contained in the volume is based mainly on data supplied by the organizations concerned. The particulars given concerning each organization include where possible: its name and address, its journal, its affiliations, membership and chief officials. This international directory of labour organizations was established by the International Labour Office several years ago and is issued periodically.

A Charter for Forced Labour

In the course of recent debate in the British House of Lords on the Draft Convention on Slavery which was adopted by the last Assembly of the League of Nations, it was intimated that the International Labour Organization would be requested to prepare an international agreement providing for the regulation of the general conditions of forced labour in the different countries in which labour of this class is still employed. The agreement in question will probably take the form of a Draft Convention or Recommendation of the International Labor Conference. The International Labour Office in Geneva has been engaged for some time past in a study of conditions of native labour in various countries, in accordance with a resolution of this subject which was adopted in 1922 by the Governing Body of the International Labour Office. The ground has thus been prepared for whatever special efforts in this field it may eventually be decided to make.

Great Britain and the 8-Hour Day Conventions

The London *Times* recently stated that the Labour Party and the General Council of the Trades Union Congress were making a new combined effort to secure the ratification by Great Britain of the Washington Convention for an international eight-hour day. The time is considered favourable because there is in the engineering and the shipbuilding industries an agreement of opinion among the employers and the workmen that the hours of work, as well as the rates of wages, in force on the continent are prejudical to the maintenance of the conditions that have been secured through industrial negotiation in this country.

The advocates of ratification point out that it would be relatively easy in this country to enforce the Convention, inasmuch as an eight-hour day is already established in so many of our industries and that the Convention is sufficiently elastic to permit of its application to industries which at first sight do not seem suited to a precise regulation of working hours. They meet the argument that different interpretations of the Convention and laxer administration on the Continent would be an unfair handicap to our industries by saying that ratification would at least tend to secure conformity to a good standard, whereas competition must tend to conformity to a bad standard, and that, having given its ratification, the British Government would be in a position to make effective representations in the event of non-observance of the Convention where it has been ratified abroad.

The General Council of the Trades Union Congress of Great Britain has accepted the offer of the Dowager Countess of Warwick, to give to the Congress her Essex estate, Easton Lodge, with 1,000 acres of land, for a trade union college. It will be run under the direct auspices and control of the Council, which will decide whether to continue the support hitherto given to Ruskin College, the Labour college at Oxford, and to the Central Labour College at London.

RECENT DEVELOPMENT IN INDUSTRIAL RELATIONS IN THE UNITED STATES

HERBERT FEIS, Professor of Economics in the University of Cincinnati, has contributed an article to the *International Labour Review*—a monthly publication issued by the International Labour Office (League of Nations), Geneva, entitled "Recent Developments in Industrial Relations in the United States," in which he points out that the tendencies which became apparent in the industrial development of the United States at the opening of the century have been greatly accentuated since the war.

Increased Rate of Production

The first striking feature of this industrial evolution since 1918 with which the writer deals is the great increase in *per capita* production. Careful studies of American production made shortly after the war tended to show that the pre-war rate of growth of *per capita* production tended to approximate to about 3 per cent per year. Even that rate of growth, considering its steadiness, was an important fact, but studies of the course of production since the end of the war appear quite definitely to show that the rate of annual growth of production, instead of declining, has actually increased. An outstanding example of this fact is cited both from the point of view of railway management and that of the employees in the case of the railroad industry. Past industrial conflict had begun to produce a pessimistic outlook as regards the future of the American industrial state. The effect of this rising production on income and its psychological influence throughout the country seemed in contrast to show that the country was at the beginning of an era of growing prosperity and improving human welfare, and not at the close of such an era, as many observers had assumed. This environment has led to a re-embellishment of the individualist outlook of earlier industrial history. New means have been sought in the effort to make this outlook effective through various experiments in the field of industrial relations and welfare, and at least a minority of employers have shown ability to place their relations with the workers on what is temporarily at least an improved basis.

Effect on Wages

Previous periods of increased productivity had not always produced any improvement in real wages, but all wage compilations, though they may differ in some degree, agree in showing that real wages, say in 1924, for practically all groups of industrial workers, were greater than in 1914. This higher than pre-war wage standard has been the basis on which managements have been able to appeal to workers for their full co-operation in production, and the reason why they have been able to utilise that co-operation to such a great extent. It has furthermore made it possible to launch other plans such as employee stock ownership plans and unemployment insurance. This increased wage standard is found in non-union plants as well as in union plants, and in some cases anti-union employers have used that fact as a great argument against trade unions, claiming that such wage levels could only be maintained in the absence of trade unionism; at the same time these anti-union employers by their programme of welfare and industrial relations have succeeded in increasing their workers' resistance to trade union organization.

Trade Union Membership

These efforts and tendencies have resulted in a decline in trade union strength since 1920. The membership of the American Federation of Labour has fallen from well over four million to something under three million in this period, despite the prevailing prosperity. It is still too early to predict whether this decline in membership has permanent significance. Part of the loss, a very large part in fact, has come in industries which were greatly extended during the war, such as the shipbuilding industries, the working force of which dispersed immediately after the war. Again, in other industries, such as railroads, the trade unions were able during the war to secure a tremendous gain in membership because of the fact that the government imposed no obstacle to trade union organization, but after the war all the ordinary opposition immediately reasserted itself. So the decline in membership is not as significant or serious as it seems on the surface; but it has been serious and significant enough to produce grave questioning in trade union ranks, and even to a certain extent a re-appraisal of trade union tendencies and policies which has made some parts of the trade union movement willing to entertain policies which they had previously rejected. It has led the main sections of the trade union movement to commit themselves even more definitely than before the war to a policy of class co-operation rather

than the contrary; it has brought in some quarters the conviction that trade unionism must find a way to co-operate in increasing production if ultimately employer resistance is not to become destructively strong.

Social Legislation

During the same period of decline in trade union strength employers have conducted a very strong fight against all new industrial or social legislation. First came a very strong reaction away from the extensions or legislation and government policy which were made during the war. For example, take the revision of the national agreements governing conditions of work on the railroads that were entered into by the United States railroad administration, and the renewed opposition to anti trust legislation. The difficulties of enforcement and occasional resentment against prohibtion legislation have also given force to a strong desire on the part of the general community not to pass any more restrictive legislation. Under these circumstances almost every legislative measure of importance dealing with labour and industrial conditions during the past few years had been beaten; prominent among the defeats being that of the child labour amendment to the U.S. constitution. Under the prevailing favourable industrial circumstance, the idea that individuals were able to care of themselves and the business should regulate itself rather than be regulated from the outside has received new acceptance, especially since many industries have been following a more humane and wise labour policy in industrial relations than previously.

This opposition to social and industrial legislation has been strengthened by the declarations and decisions of the United States Supreme Court, particularly the decisions which declared the unconstitutionality of the Living Wage Legislation for Women and of the Kansas Court of Industrial Relations. In a whole series of decisions both the State Supreme Courts and the Federal Supreme Court have been laying down marked limits to the right of state interference in industrial activities and relations. Other court decisions, furthermore, have constantly widened the restrictions placed upon trade union activity in labour disputes and have given a broadening definition of property rights and of injury to property rights. The courts, as well as a large part of the political community, have, temporarily at least, accepted business philosophy and are looking to industry itself to solve problems of industrial relations.

New Management Policies

Under these circumstances industrial management in the United States has become more self-conscious and self-critical than formerly and managerial methods have improved. Many individual enterprises and industries have definitely adopted the belief that unless they can successfully solve their industrial problems they will be faced in the future with problems far more serious and burdensome than the present ones arising out of the government regulations and of trade union control. This change and improvement in managerial methods and policy, affecting industrial relations, has arisen from many causes and has taken many directions. Besides the self-protective purpose just explained, and besides the fact that restricted immigration has made labour scarce and intelligent policy remunerative, two other special causes may be particularly observed: first, several years of extremely stiff competition were inaugurated by the depression of 1921 and during this period an intelligent and forward-looking industrial relations policy was in many instances found to pay, and thereby continued; secondly, there has been in the United States a continuously growing study of industry and industrial methods in and out of technical schools. A large number of the universities have established schools of business administration in which business methods, business problems and policies are carefully analyzed and discussed. In these schools and universities the tendency has been to work out careful industrial relations plans based at least in some measure upon employee co-operation—though the prevailing instruction is critical of trade union activity. The graduates of these institutions, therefore, have entered industry in a more open and experimental frame of mind than the older generation of business men and with a greater sesnse of obligation towards their workers. Furthermore, these colleges of business administration and engineering schools have gradually created standards of critical judgment for the business community and have contributed much to the growth of productive efficiency.

The extension of the influence of engineers on the business activities is especially notable. Consulting engineering firms, which study all sides of business as private employers' counsel, have established themselves and have in many instances been responsible for a decided improvement in labour policy, though these same firms are usually strongly anti-unionist. All these things tended to foster more carefully planned and farsighted policies than those previously maintained by the conservative elements in the business community.

This intensified study of business activity may, in fact, be regarded as merely part of a general tendency encouraging the application of scientific methods to industrial life. This use of the "scientific" method, of the method of careful study and deliberate preparation, has gone into all directions. It has led to an intense activity in technical research dealing with such questions as the improvement of machinery, the study of chemical and raw materials, of methods of supplying power, of routing goods, and of standardizing the product. In another direction there has been a great expansion of what may be called business or economic research, dealing, for example, with the problems of price movement, of the business cycle, of unemployment, and of methods for preventing the same. There has been developed a greatly improved technique in measuring and controlling production costs, and new methods of managing relationships between the production, the sale, and the financial parts of individual businesses. Along with research in these directions has come carefully planned study of industrial relations and personnel methods—closely connected with the other branches of research and dealing with employment policies, training, and apprenticeship policies, health and working conditions, methods of wage payment, shop organization, wage earners' investment.

There has been some quackery in these developments, but more sincerity. Many of these movements have been encouraged partly, if not solely, in order to forestall the growth of trade unionism. Some of them have in themselves affected trade union activity and outlook. In some instances trade unions have co-operated in the new policies either out of a sincere conviction that they would produce an improvement in the welfare of the industrial workers, or merely from recognition of the fact that unless trade unions could make good in terms of actual production they would have to face an exceedingly grim fight and possible extermination. But the new policies have been adopted most extensively in the non-organized plants and industries. The trade union movement has usually taken an indifferent or hostile attitude towards them within plants or industries where trade unionism exists. To this course, however, there appear to be some notable exceptions.

Joint Management

Among the trade union adaptations to these new managerial methods and policies, one is of particular interest: the occasional tendency on the part of organized trade unionism to accept (though at the same time to control and modify if possible) scientific management methods of production, of measuring production, and of wage payment. Up to the recent past there had been practically no break through the trade union opposition to the shop methods which have been called "scientific management." But in more recent years these methods themselves have received more careful study and adaptation to the workers' position and psychology; furthermore, in their application in some plants and industries they are supported by specific protected guarantees as regards minimum wages. The possibility of increased production under the proper application of these methods has now become almost beyond dispute in the United States. It is found that in the past few years trade unions here and there have shown a willingness to permit the introduction of those methods if they are given a share in the control of their use. Examples of the trade union consent are found in the production plans in use in the machine shops of the Baltimore and Ohio Railway, a highly successful experiment in the use of scientific management methods under joint control. The B. and O. plan, as it is called, has more recently been adopted on the Canadian National Railways, and by one of the big railway systems on the Pacific coast. The Machinists' Union, formerly a most determined opponent of scientific management, now has its own consulting engineer to advise on matters of shop efficiency. Another indication of trade union adaptation is to be found in the garment industries, where the unions are working under a wage scheme in which wages definitely vary with measured and controlled production.

The writer finds that temporarily at least the industrial workers in the United States, especially the unorganized, appear ready to work under the ideal outlook and possibility expressed by the management students as a combination of "high productivity, high general wages, good working conditions, low labour cost." Some elements in the trade unions seem inclined to accept this same platform of agreement with the employers, at least until events prove the outcome unsound from the union point of view. Many of the trades unions, however, such as those in the building trades, have not changed their attitude at all, and still regard all the new management methods with suspicion and distinct opposition. They believe that the first depression will reveal their shortcomings and prove that they are nothing more than devices to weaken organized trade unionism.

Shop Committees

Another new development in industrial relations with which the writer deals is the growth of the shop committee or works council movement. In plant after plant, largely at the encouragement of the employers, machinery for the joint conference of workers and employers has been established. These shop committees differ much from each other in organization, method of procedure, and range of activities. With few exceptions they exist in unorganized plants and industries and are regarded by the employers as a means of communication with their workers and of creating joint understanding. A table is published in Professor Feis' article showing the existence in 1924 of 814 works councils. Employee representation plans are shown to be used by 212 separate companies, applicable in all to 1,177,037 workers. A noticeably large proportion of these works councils are in the metal trades, which are unorganized. This whole development is still distinctly in the experimental stage. A small minority of the shop committees play a real and actual part in the conduct of production and in the settlement of wages and working conditions. The rest have little or no actual influence, but their establishment in other cases signifies the admission of one right which before the war was by no means universally admitted by employers, that is, the right of the workers in any plant to joint conference and consultation with the employers. This practice of joint conference, now almost universally admitted, has become essential in American industry and its ultimate significance may be great. There is little doubt in the writer's mind that the time is not far ahead when the workers in all industrial enterprises of large size will regard the establishment of some sort of shop committee as an integral and natural part of their position and rights in the enterprise.

Co-partnership

Still another development in industrial relations with which the writer deals, are the stock distribution plans which have been the subject of very active experiment in recent years. These plans involve the sale of securities of particular industrial enterprises to the workers employed in those enterprises, usually under favourable conditions. The initiative has on the whole come from the employers, but the wage earners in some of the enterprises concerned have shown an amazing readiness of response, especially if the securities were offered to them on favourable terms. The Liberty Loan campaigns in the United States led to an extremely wide distribution of national securities and familiarized the bulk of industrial wage earners with the idea of receiving income from the ownership of securities. In practically all cases, the purchase by the wage earner has been facilitated by arranging for deductions from the pay roll and in some cases by sale below market price or otherwise by special terms. In a small minority of cases the stock distribution plans are part of a general profit-sharing system. In the writer's opinion, the response to these offers on the part of the workmen has been extremely ready. There can be little doubt, he declares, that the ordinary industrial worker in the United States not only has no ethical or social feeling against the ownership of securities and the receipt of income from this ownership, but rather is only too eager to get his chance to become a capitalist by owning securities. The chance of holding securities which would be likely to increase in value has also been a great inducement to individual thrift. In 1910 there were only 300,000 stockholders of securities of steam railroads in the United States; to-day there are over 800,000, the net addition being made up largely of railroad employees. It is estimated that 630,000 people own telephone securities in the United States of which a very large percentage are employees of the telephone companies. In practically all of the plans for stock distribution it is arranged that the employee stock ownership cannot gain or hold actual control of the enterprise. The securities sold are either some form of bonds or non-voting preferred stock. Besides the investment in securities, American wage earners have considerable investments in life insurance, very considerable and ever-growing deposits in savings banks, and extended membership in building and loan associations—the latter to the number of almost eight million. In short, the present trend, temporary or permanent, seems to be to make at least the skilled portion of the industrial workers also property owners, a distinctly new turn in the industrial outlook and one raising a possibly new prospect in industrial relations.

Labour Banking and Insurance

The writer next passes to the labour bank movement. The trade union organization which has created the largest number of banks has been the Brotherhood of Locomotive Engineers. While the interpretation of this movement is difficult, the writer declares that one great factor in it is the strong desire of the ordinary wage earner to play a part or have something to do with industrial and financial affairs. A list of labour banks is given showing the imposing dimensions attained by some of these organizations.

Reference is also made to the industrial insurance plan of the American Federation of Labour. In its present stage this plan would seem to call for the creation of an industrial company managed by the labour movement to furnish industrial insurance as cheaply as possible.

Conclusions

A view of the matters that will ultimately determine the results of present tendencies and their growth or decline are mentioned by Professor Feis in the conclusion of his article. At the head of the list the writer puts the question of how sincere and far-sighted the business men of the United States prove to be in the further development of these plans. The business community itself believes these plans to be the beginning a new phase of American and industrial history. The larger corporations, under the advice of their engineering and industrial relations expert advisers, are working with honesty and openness to create a smooth-working system of industrial co-operation in the United States. They may on the contrary merely use all the devices that have been set forth as an instrument for preventing any restriction on their liberty, and any threat to their profits. If the United States should get a real industrial depression in which it becomes hard for the employers to maintain many of their welfare plans, in which the employers feel themselves under pressure to reduce wages as much as possible, in which the workmen are thrown out of employment to the same extent as in some past depressions, then there will come a real test of the significance of these new tendencies in American industrial relations. One's opinion of their possible fruitfulness and success depends after all on whether one believes that the American economic position holds a possibility of a successful and reasonably just co-operation between employers and workers, whether human nature is good enough to produce such an outcome under the limitations and difficulties presented by the fluctuations, the competition, and the extreme complexity of the modern capitalistic system. Another important element in determining the outcome of these plans will be whether the improvement in managerial methods and production methods and the progress in industrial invention can be maintained.

Professor Feis finds that the American trade union movement is trying to understand and to meet all these developments, also to decide which of them may be beneficial to American life and to the trade union movement, and which threatening. It is faced with the problem of whether it can bring these developments under a sufficient measure of control to safeguard the workers' welfare and prevent a whole course of events from resulting finally in the subordination of the individual worker to industrial enterprise.

ANNUAL CENSUS OF INDUSTRY OF CANADA

THE Dominion Bureau of Statistics, under the Statistics Act of 1918, takes annually by mail an industrial census, covering statistics of fisheries, mines, forestry, and general manufactures in Canada. This annual census is in addition to the Bureau's decennial census and the statistics of population, finance, education, etc. Preliminary reports on various industries have been reviewed in previous issues of the LABOUR GAZETTE. These preliminary reports are consolidated from time to time in general reports issued by the Bureau.

The Sugar Refining Industry, 1924

This report covers operations in 7 factories operating in 1924, the number including 2 in Ontario, 2 in Quebec, and one each in New Brunswick, Nova Scotia and British Columbia. Statistics are shown for the Dominion only.

The report gives comparative statistics for the years 1920 to 1924 inclusive. In 1920 there were 8 refineries, and in each of the following years, 7. The capital investment was greatest in 1924 at $46,229,188 as compared with $45,618,182 in 1923.

The value of products and by-products was greatest in 1920 at $119,086,731 and was $67,292,122 in 1924 as compared with $77,004,026 in 1923. The value added by manufacture was also greatest in 1920, being $15,397,643, with $12,220,549 in 1924 and $15,186,164 in 1923.

Comparative statistics of production of sugar and value of the same show that production was greatest in 1922 at 1,148,104,374 pounds, valued at $69,667,016. In 1924 production was estimated at 871,628,232 pounds valued at $65,922,309, and in 1923, 841,978,637 pounds valued at $76,144,634.

The table of consumption of sugar was made up by adding together home production and imports and deducting the exports of goods the produce of Canada. This left the remainder available for consumption in 1920, 722,889,454 pounds valued at $106,443,479; in 1923, 739,897,269 pounds valued at $65,362,952; and in 1924, 830,525,336 pounds valued at $61,134,282. The per capita consumption of sugar in 1920 was 83.75 pounds; in 1921, 81.68 pounds; in 1922, 93.30 pounds; in 1923, 81.46 pounds; and in 1924, 90.01 pounds.

The acreage sown to sugar beets was in 1920, 34,491, which was the greatest during the period. The number declined to 14,955 in 1922 and advanced to 31,111 in 1924. The total yield was 343,000 tons valued at $5,307,243 in 1920; 127,807 tons valued at $966,522 in 1922, and 295,177 tons valued at $1,704,791 in 1924.

The production by class, quantity and selling value of sugar at the refinery is shown as well as of the various by-products of the industry. The quantity of sugar refined in Canadian factories in 1924 exceeded that in 1923 by 29,649,595 pounds, but there was a decrease in total value of $10,222,325. Cane sugars in 1924 showed a falling off in quantity of production of 16,697,954 pounds as compared with 1923, but, on the other hand, beet sugars showed a greatly increased production during the same period, amounting to 46,347,549 pounds, leaving a net increased production. Molasses increased by 1,460,651 gallons and in value by $251,775. The net decrease in total value of production is accounted for by the fall in the market prices of raw cane sugar and of sugar beets.

In 1924 the quantity of granulated sugars made from cane was 696,756,646 pounds, and from beets, 85,770,709 pounds, the value of the two being $59,152,471. There were 89,100,877 pounds of soft sugars made, valued at $6,769,838; 421,444 gallons of syrup valued at $249,543; 1,724,321 gallons of molasses from cane, and 1,841,963 gallons of molasses from beets, together valued at $547,054, and 15,977 tons of dried beet pulp valued at $419,234. The value of other by-products was $153,982, making a total value of $67,292,122.

The total capital invested in the industry increased from $45,618,182 in 1923 to $46,229,188 in 1924, an increase of 13.4 per cent.

The number of employees is shown by sex and remuneration, there being in 1924, 2,240 male and 147 female employees receiving in salaries and wages $3,399,826.

A table of employment by months shows that employment was highest in October with 2,526 employees and lowest in January with 1,419.

The average number of days in operation on full time was 213.43, with an average of 90.57 days idle. The average number of hours per day or shift was 10.43, and per week, 65.43.

Tables also show fuel consumption, power installation and materials used.

The total value of imports was $45,449,413 and of exports, $7,642,256. Of the latter, $7,412,153 was sugar, the remainder being comprised of molasses and syrups, sugar house syrup, glucose and glucose syrups and sugar beets.

The Linseed Oil Industry, 1924

This report covers 8 individual plants operating during the year, including 3 in Quebec, 2 in Ontario, 2 in Manitoba, and 1 in Alberta. The capital investment was $2,818,291 in 1923 and $2,231,954 in 1924. The number of employees was 249 in 1923, earning in salaries and wages $299,906, and in 1924, 217, earning $286,977. The cost of fuel was $18,601 in 1923 and $27,631 in 1924. The power equipment was 58 units in 1923 and 69 in 1924. The net value of products was $5,761,840 in 1923 and $5,911,530 in 1924, an increase of 2.6 per cent.

The selling value of the products at the mill was $5,911,530 in 1924, the largest item 2,833,258 Imperial gallons of raw linseed oil valued at $2,900,431.

The table of capital invested by provinces shows the total investment in Canada to be $2,231,954; in Quebec, $1,057,366, and in other provinces $1,174,588.

The table of employment by months, 1924, shows the months of highest employment to have been January and February, and those of lowest employment, August and September. The average monthly employment was 179, of which males numbered 177 and females 2. The average operating time of plants in the industry whether on full or part time was 268.75 days, and the average hours of labour were 9.47 per day, and 58.50 per week.

Tables also show fuel consumption and power installation, and materials used.

A table shows imports of flaxseed, oils and oilcake and meal for consumption in Canada, by quantities and values and by principal countries. The total value of imports for consumption in Canada fell from $1,993,676 in 1923 to $927,590 in 1924, while exports on the other hand showed an increase of from $7,126,824 in 1923 to $7,591,652 in 1924, or 6.5 per cent.

The Cordage Rope and Twine Industry, 1924

The number of establishments in operation in this industry in 1924 stood at 9 as in the previous year, there being 5 in Ontario, 2 in

Quebec, 1 in Nova Scotia and 1 in British Columbia.

The capital investment in 1924 was $9,416,545 as compared with $7,329,319 in 1923. The cost of fuel was $29,936 as compared with $37,178, and the power installation was 132 units as against 104 in 1923. The net value of products was $3,779,894 in 1924 as compared with $2,890,373 in 1923.

The production of cordage, rope and twine by provinces showed a total value of $6,991,988 in Ontario and $1,884,798 in other provinces, making a total value of $8,876,786 for Canada.

The total number of employees in 1924 was 1,359 earning in salaries and wages $1,486,702 and the number in 1923 was 1,305 earning $1,437,628.

The statistics of employment by months showed that November was the month in which the maximum number 1,327 was employed, while the minimum, reported in July, was 1,180. The average number employed during the year was 1,281, comprising 994 male and 287 female employees.

The average number of days in operation in 1924 was 287.7 full time and 3.6 part time, while the average number of days idle was 12.7. The average number of hours per day was 9.8, and per week, 52.4.

Statistics are given for materials used, fuel consumption and power equipment.

The value of imports into Canada from the United Kingdom was $1,959,981, with $8,750,399 from the United States and $390,395 from other countries. The value of exports to the United Kingdom was $149,469, with $1,383,832 to the United States and $372,723 to other countries.

The consumption of binder twine in Canada was 724,049 cwt. valued at $8,566,163 in 1924 as compared with 810,430 cwt. in 1923 valued at $8,890,723 and 761,933 cwt. in 1922, valued at $8,121,800.

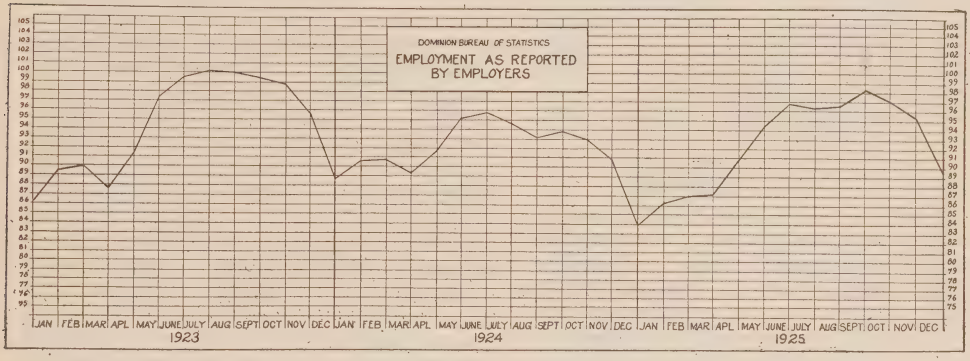
THE EMPLOYMENT SITUATION AT THE BEGINNING OF JANUARY, 1926, AS REPORTED BY EMPLOYERS TO THE DOMINION BUREAU OF STATISTICS

EMPLOYMENT at the beginning of January, 1926, showed considerable seasonal curtailment, but the losses were the smallest registered at that time in any year since the record was begun early in 1920. The 5,708 firms whose returns were tabulated reported 733,175 employees; this was 46,479, or practically 6.0 per cent less than in the preceding month. The index number stood at 89.6 on January 1, 1926, as compared with 95.3 on December 1, 1925, and with 83.9, 88.7, 86.3, 77.9 and 87.7 on January 1, 1925, 1924, 1923, 1922 and 1921, respectively. Employment was thus at a slightly higher level than on January 1 of any previous year of the record.

With the exception of coal mining, all industries showed contractions. The losses in manufacturing, which chiefly represented shutdowns for holidays and inventories, were most extensive, although they were not as large as in preceding years; construction and transportation also reported pronounced decreases. If employment follows the course indicated at the beginning of February in previous years, considerable revival will be shown in the next report.

Employment by Provinces

Employment declined in all except the Maritime Provinces; as is usual at the time of year, the manufacturing provinces of Quebec and Ontario reported the largest contractions.



Maritime Provinces.—Very heavy freight traffic caused employment in transportation (both rail and water) to increase considerably in the Maritime Provinces, the seasonal gains in shipping and stevedoring being especially marked. Manufacturing, logging, trade and construction, however, registered losses, also seasonal in character, of which those in the last named were most extensive. Returns were received from 492 employers, having 62,230 workers, or 573 more than they had on December 1, 1925. Moderate reductions were indicated at the beginning of January of a year ago, when employment was in smaller volume.

Quebec.—The greatest decreases in Quebec were in shipping, owing to the closing of the St. Lawrence ports; manufacturing, construction and logging also registered reduced employment. Within the manufacturing group, tobacco, food, building material, iron and steel and textile factories showed the largest losses. The payrolls of the 1,249 firms reporting aggregated 198,418, as against 215,982 in the preceding month. Considerably larger reductions were noted on January 1, 1925, when the index was between five and six points lower.

Ontario.—The shrinkage in Ontario was less extensive than on the same date of last year, when employment was not so active. The 2,608 employers whose statistics were received released 21,524 persons from their payrolls,

which totalled 304,907 on January 1, 1926. Manufactures, especially the iron and steel, lumber, food and textile divisions, recorded the most pronounced contractions, but construction, transportation and trade were also decidedly slacker.

Prairie Provinces.—Employment in the Prairie Provinces showed a 2 per cent decline, which was considerably smaller than that noted on January 1, of either 1925 or 1924. Statements were tabulated from 739 firms having 100,576 employees on the date under review, as compared with 102,978 in the preceding month. Construction recorded the greatest curtailment, but manufacturing, mining, transportation and trade also reported reduced staffs.

British Columbia.—Although the losses registered in British Columbia rather exceeded those of the same date of last year or of 1924, the level of employment on January 1, 1926, was higher than at the same time in any other year of the record. The index stood at 100.5, as compared with 92.9 on January 1, 1925, and 90.9 on January 1, 1924. Manufacturing, especially of lumber products, logging and construction, showed the greatest losses, while coal mining was a good deal more active. A combined staff of 67,044 persons was reported by the 620 employers furnishing statistics; they had 72,606 workers on December 1.

Index numbers of employment by economic areas are given in Table I.

Employment by Cities

The trend of employment in all cities was downward. Montreal firms reported the most pronounced losses.

Montreal.—There was extensive curtailment in shipping, due to the closing of navigation for the season. Manufacturing and construction also released many workers; within the former division, the greatest reductions were in tobacco, iron and steel and food factories. The working force of the 681 firms making returns declined from 109,874 on December 1, to 99,301 on January 1. On the corresponding date of last year, larger decreases were noted and the index was lower.

Quebec.—Employment in Quebec also decreased, 355 persons being let out by the 85 employers reporting. They had 7,616 workers. The bulk of the loss was in transportation, mainly shipping, and in construction, and was seasonal in character. Rather greater reductions were made on January 1, 1925, but employment then was more active.

Toronto.—According to statistics from 752 Toronto firms, their pay rolls, aggregating 91,973, were smaller by 4,552 persons than in the preceding month. Manufacturing, transportation, construction and trade registered the most marked decreases, but all industries shared in the downward movement. Employment on January 1, 1926, was in greater volume than on the date of last year, when the reductions involved a greater number of workers.

Ottawa.—General, though rather slight declines were recorded in Ottawa, where 118 firms employed 9,133 persons, or 233 less than in the preceding month. This contraction was smaller than that indicated on January 1 of last year.

Hamilton.—The losses in Hamilton took place in manufacturing, transportation and trade. Although they greatly exceeded those reported on January 1, 1925, the situation was more favourable on the date under review. Statements were tabulated from 190 employers having 25,642 persons on their staffs, as compared with 26,887 at the beginning of December.

Windsor and other Border Cities.—The usual closing for inventory of large automobile fac-

tories in Windsor caused large, though temporary, reductions. Returns were compiled from 72 firms employing 6,094 workers, as against 10,044 on December 1, 1925.

Winnipeg.—Construction and manufacturing afforded less employment in Winnipeg than in the preceding month. The working force of the 276 employers reporting totalled 24,625, compared with 25,265 at the beginning of December. This decrease is very slightly smaller than that noted on January 1, 1925, but the index number then was lower.

Vancouver.—Approximately the same number of workers were released by the firms reporting for January 1, 1926, as were let out on the same date of last year, when employment was not so active. A combined payroll of 22,862 persons was employed by the 230 firms reporting, who had 24,041 workers in the preceding month. Manufacturing, especially of lumber products, construction and trade, showed most curtailment.

Table II gives index numbers by cities.

Employment by Industries

Manufacturing.—Iron and steel, lumber, food, textile and tobacco factories recorded marked reductions in payroll, while in non-ferrous metal, building material, leather, pulp and paper, mineral product and electrical appliance works, there was also a considerable falling off in employment. These losses, as in former years, were mainly due to shutdowns for holidays and inventories, and considerable recovery may be looked for in the next report. The working forces of the 3,678 manufacturers making returns aggregated 407,552 persons, as compared with 431,403 on December 1, 1925. This reduction of 23,851 operatives was smaller by almost 7,800 persons than that recorded on January 1, 1925, and by over 16,000 than that recorded in 1924. The index number stood at 83.2, compared with 88.1 on December 1, 1925, and with 75.5, 80.1, 78.1, 68.7 and 78.4 on January 1, 1925, 1924, 1923, 1922 and 1921, respectively.

Animal Products—Edible.—Dairies, meat slaughtering and packing establishments and fish preserving factories reported a smaller volume of employment than at the beginning of December, all provinces sharing to some extent in the downward movement. Statements were tabulated from 143 firms in the animal product group who employed 13,644 workers, as compared with 14,549 in the preceding month. This contraction rather exceeds that indicated on January 1, 1925, but the index number then was very slightly lower.

Leather Products.—Boot, shoe, glove and other leather factories afforded less employment than on December 1, according to 187 manufacturers having 15,769 employees, or 617 fewer than in the preceding month. Quebec and Ontario reported the bulk of the loss, which was smaller than on the same date of last year, when the situation was slightly less favourable.

Lumber and Products.—Continued extensive curtailment was noted in lumber mills, while there was also a falling off in employment in furniture factories. The decline, however, was not as pronounced as at the beginning of January, 1925, when the index number was lower. The working force of the 686 lumber manufacturers whose statistics were received, aggregated 38,016, as against 41,937 on December 1. Improvement on a moderate scale was indicated in the Maritime Provinces, but elsewhere contractions were registered, of which those in Ontario and British Columbia were much the largest.

Plant Products—Edible.—The seasonal reductions recorded in this group were smaller than in any of the last three years, and employment was in greater volume than on the same date of 1925, 1924 and 1923. The most marked losses continued to be in fruit and vegetable preserving, but biscuit, chocolate, confectionery, starch, glucose, sugar, syrup, flour and other cereal mills were also slacker. A combined staff of 24,875 persons was reported by the 302 firms making returns, who had 28,175 employees on December 1, 1925.

Pulp and Paper.—The shrinkage in this division was also less than in previous years of the record; 768 persons were released by the 443 employers reporting, whose payrolls included 51,216 workers. There were reductions in pulp and paper mills and also in works producing miscellaneous paper goods, but printing and publishing afforded slightly increased employment. The index stood at 100.8 on January 1, 1926, as compared with 95.6 on the same date of last year.

Rubber Products.—There was a slight falling-off in employment in rubber goods at the beginning of January, but employment was much better than on January 1, 1925, when greater curtailment was indicated. Returns were compiled from 30 employers having 13,299 employees as compared with 13,416 in the preceding month.

Textile Products.—Reductions on a rather larger scale than at the same time in 1925 were noted in the textile group on January 1, when conditions were better than on the corresponding date of last year. Hosiery, knit-

ting and garment factories recorded the greatest losses, but cotton and other divisions of the textile group also registered contractions. The working force of the 506 manufacturers making returns aggregated 67,220, as compared with 69,721 in the preceding month. The largest declines were in Ontario and Quebec.

Tobacco, Distilled and Malt Liquors.—The usual shutdowns for holidays and stock-taking caused pronounced losses in this division on January 1; the losses were, however, less extensive than on the same date of last year, when the index number was considerably lower. The working forces of the 100 employers reporting aggregated 9,969 persons or 2,125 less than at the beginning of December. A very large share of this loss was in tobacco factories in Quebec and Ontario.

Chemicals and Allied Products.—There was a falling-off in employment in chemical factories, mainly in Ontario. Statements were compiled from 112 firms having 6,044 employees, as compared with 6,316 in the preceding month. The downward movement repeats that shown at the same time in 1925, but the index number then was slightly lower than on the date under review.

Clay, Glass and Stone Products.—Employment in building material work declined, as is customary at this time of year, but less extensively than on January 1, 1925. An aggregate working force of 7,731 persons was employed by the 106 factories reporting, as compared with 8,825 at the beginning of December. All the provinces except British Columbia shared in the downward movement.

Electric Current.—Further though smaller contractions were noted in electric current plants, 86 of which released 184 workers from their staffs of 11,360 employees. There were moderate declines in Quebec, Ontario and British Columbia. Although this reduction was smaller than on January 1, 1925, employment then was in somewhat greater volume.

Electrical Apparatus.—An unfavourable tendency was shown in plants producing electrical apparatus, the shrinkage being rather greater than on January 1 of last year, when the index number was higher. Practically the entire loss took place in Ontario. Reports were received from 34 manufacturers having 9,153 persons in their employ, as against 9,462 in the preceding month.

Iron and Steel.—Although there were important reductions in iron and steel factories on January 1, they were the smallest registered on that date of any other year since the record was begun in 1920. The index number stood at 71.0 as compared with 60.0 on January 1, 1925. Automobile works registered the largest losses, but curtailment was also shown in steel shipbuilding, heating appliance, pipe, small hardware, boiler, engine and tank works, and in foundries and machine shops. Agricultural implement and rolling mills, on the other hand, showed a moderate improvement. Returns were tabulated from 639 firms in the iron and steel group, having 109,500 employees as compared with 115,469 at the beginning of December. Increases were shown in the Maritime and Prairie provinces, but elsewhere curtailment was indicated, that in Ontario being most extensive. Very considerable recovery from these losses was, without doubt, indicated during the month of January.

Non-ferrous Metal Products.—The contractions indicated on January 1, 1926, were much greater than on the same date last year, but the index number then was lower, standing at 73.3, as compared with 86.1 on the date under review. Lead, tin, zinc and copper plants reported the largest reductions; these took place chiefly in Ontario and British Columbia. Statements received from 104 firms showed that they employed 12,691 persons, as compared with 13,712 at the beginning of December.

Mineral Products.—Continued reductions were registered in the mineral products group, although the losses affected a smaller number of workers than on January 1, 1925. Employment then was less active than on the date under review. The working force of the 71 firms making returns aggregated 9,002 persons, or 489 less than at the beginning of the preceding month. The decreases took place almost entirely in Quebec and Ontario.

Logging

Employing in logging declined, according to 218 firms having 28,361 employees, as compared with 30,798 in the preceding month. Additions to staffs were indicated in Ontario and the Prairie Provinces, but elsewhere there were reductions, of which those in British Columbia were the largest. Bush operations showed a comparatively small decrease at the beginning of January of last year, when the index was higher.

Mining

Coal.—Increased activity was indicated in the British Columbian coal fields; in Alberta contractions were noted while in the Maritime Provinces the situation remained practically unchanged. The 90 operators whose statistics were received reported 26,995 employees as against 26,608 in their last report. Somewhat smaller gains were indicated on January 1, 1925; the level of employment than was almost the same as on the date under review.

Metallic Ores.—The trend of employment continued to be downward in metallic ore mines, as is usual at the time of year. The losses, however, were not as pronounced as on January 1, 1925, when employment was in greater volume. The majority of the workers let out were in British Columbia. Reports were compiled from 45 employers having 10,960 workers, as compared with 11,172 in the preceding month.

Non-metallic Minerals other than Coal.—Asbestos mines in Quebec, and quarries througout the country, reported curtailment of operations, principally of a seasonal character, that caused the release of 423 employees. The 71 co-operating firms had 5,596 workers. The contractions indicated on January 1, 1925, were much greater and the index number then stood at 75.5, as compared with 91.2 on that date of the present year.

Communication

Telegraphs and telephones reported reduced activity, 301 persons being laid off by the 180 communication companies and branches reporting, whose staffs aggregated 23,125. The former division of the group registered larger losses than the latter. Similar reductions were noted on the same date last year, when employment was in less volume.

Transportation

Street railways and cartage.—Further reductions in personnel were indicated by street railways and cartage companies, but the decreases were considerably smaller than on January 1, 1925. A combined working force of 18,529 persons was reported by the 113 firms making returns, who had 19,149 employees on December 1. Quebec and Ontario registered most of the decline.

Steam Railways.—The seasonal lay-off on steam railways also involved a smaller number of workers than on the same date a year ago; the index then stood at 93.8 as compared with 98.6 on January 1, 1925. The payrolls of the 100 firms and divisional superintendents whose statistics were received, declined from 76,880 on December 1 to 76,414 at the beginning of January. Substantial seasonal gains were noted in the Maritime Provinces, but elsewhere employment declined.

Shipping and stevedoring.—The re-opening of the winter ports caused important increases in employment in water transportation in the Maritime Provinces, but there were larger declines, also seasonal, in Quebec, as well as smaller losses in Ontario. Statistics were furnished by 57 firms having 10,363 employees on January 1, as against 15,149 in the preceding month. More pronounced contractions took place on January 1, 1925, when a smaller number of employees was recorded by the reporting employers.

Construction and Maintenance

Building.—The downward movement begun in October continued to be in evidence at the beginning of January, when 4,118 employees were released by the 292 building contractors making returns, who had 20,326 persons in their employ on January 1. All provinces shared to some extent in this decline, but the losses in Quebec and Ontario were largest. The situation was better than at the beginning of January of a year ago, the index number then being 91.3 as compared with 109.1 on the date under review.

Highway.—Continued losses were indicated in highway construction, according to 111 employers having 5,919 workers, or 4,725 fewer than in their last report. This seasonal decline was also distributed over the country as a whole, except that the Prairie Provinces registered much the smallest declines. The curtailment noted at the beginning of January, 1926, was less extensive.

Railway.—The construction departments of the railways reported further seasonal decreases in all provinces. Statements were tabulated from 34 employers having 26,411 persons on their payrolls, as compared with 30,171 in the preceding month. Rather greater declines were recorded on January 1 of last year and the situation then was less favourable.

Services

Hotels and restaurants employed a smaller number of persons, while little general change was shown in other branches of this group. The firms reporting, numbering 168, employed 13,130 workers, or 119 less than in the preceding month. Conditions are practically as on the same date of 1925.

Trade

Following the great activity of the holiday season, there were declines in employment in retail and wholesale trade at the beginning of January. Returns were tabulated from 551 establishments having 59,494 employees, or 1,048 less than on December 1. This reduction was smaller than that noted on January 1, 1925, when the index number was lower.

Table 3 gives index numbers of employment by industries as on January 1, 1926, as compared with December 1, 1925, and with January 1, 1925, 1924, 1923 and 1922. The column headed "Relative Weight" shows the proportion that the number of employees reported in the indicated industry bears to the total number of employees reported in Canada by the firms making returns on January 1, 1926.

NOTE.—The number employed by the reporting firms in Jan. 1920, is taken as 100 in every case. The "relative weight" in Tables I, II and III shows the proportion of employees in the indicated district or industry to the total number of employees reported in all districts and industries on the date under review. In Tables IV and V it shows the relative importance of the indicated industry within the specified area.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES (JAN. 1, 1920=100)

Industry	Relative weight	Jan. 1 1926	Dec. 1 1925	Jan. 1 1925	Jan. 1 1924	Jan. 1 1923	Jan. 1 1922
Manufacturing	55·6	83·2	88·1	75·5	80·1	78·1	68·7
Animal Products-edible	1·9	88·7	94·1	87·2	79·5	85·5	85·5
Fur and products	0·1	82·6	96·5	80·3	98·8	100·0	95·4
Leather and products	2·2	73·3	76·5	71·0	74·9	82·2	85·6
Lumber and products	5·2	77·7	86·6	70·4	74·8	80·1	62·7

NOTE.—The relative weight column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

UNEMPLOYMENT IN TRADE UNIONS DURING THE QUARTER ENDING DECEMBER 31, 1925, AS REPORTED BY UNIONS MAKING RETURNS

UNEMPLOYMENT as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades or who are idle because of illness, or as a direct result of strikes or lockouts are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variations in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The present article on unemployment among the members of trade unions deals with the situation reported during the quarter ending December 31, 1925, and is based on the returns of the locals reporting at the end of each month during the quarter. At the end of October the percentage of unemployment was 5.1 as compared with 5.7 per cent at the end of September. The seasonal industrial depression during the following two months brought the unemployment percentage on December 31 to 7.9. The situation during each month of the quarter under review, however, was more favourable than in the same month of the corresponding quarter of 1924.

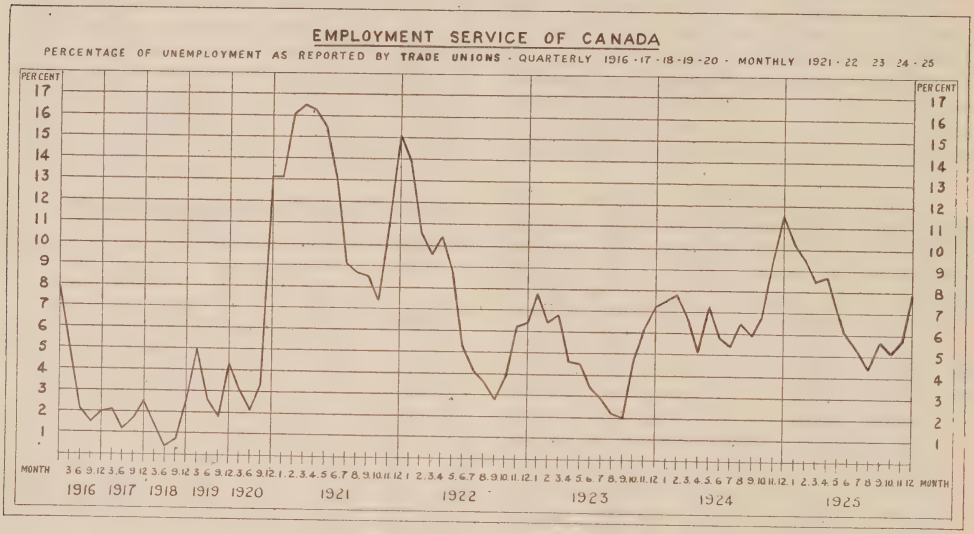
The accompanying chart shows the curve of unemployment as reported by trade unions by quarters from 1916 to 1920 inclusive, and by months from 1921 to date. The curve has shown a downward tendency from the beginning of 1925 to the end of August with one interruption at the close of April, and from then an upward trend to the end of the year, with the exception of the month of October when the situation improved slightly.

Employment in Manitoba, Saskatchewan and Alberta was in slightly lesser volume during October than in September, but in the remaining provinces conditions were somewhat better. The building trades and fishing and transportation industries were slacker. More work was afforded in the mining and manufacturing industries.

During November, Quebec and Alberta were the only provinces to register improvement over the previous month, and the gains were slight. Neither were the declines in the remaining provinces particularly noteworthy. Fishermen were much better employed than in October and miners also reported an improved situation. Lumber workers were much slacker, and lesser declines were indicated in the transportation and manufacturing industries and in the building trades.

Nova Scotia and New Brunswick reported nominal increases in employment during December as compared with November, but in the other provinces there were contractions, that of 4.4 in Quebec being the most substantial. Shutdowns over the holiday period affected materially the situation in the manufacturing industries, the reductions being particularly marked in the metal trades, though employment in the printing, textile and glass trades also declined. The building trades

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES



Month		N.S. and Pr. Edw. Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

Dec.	1925	4·3	3·0	14·2	6·4	3·8	3·5	4·4	6·9	7·9

afforded much less work as did also the lumber and logging industry. Transportation workers were slightly less active. Miners, on the other hand, reported some improvement.

Table I on page 165 summarizes the returns by provinces for each month from October, 1921, and Table 3 on page shows the percentages of unemployment reported in the different groups of industries also by months from October, 1921.

ier, and conditions were also better for lumber workers and loggers.

Nearly 8 per cent more employment was reported in the manufacturing industries during December than in the same month of 1924. Garment and textile workers were much better employed and lesser gains were indicated in the metal and printing trades and among glass workers and papermakers. The transportation industries as a whole were

During October, employment in the manufacturing industries increased 2 per cent in comparison with October, 1924, due to activity in the printing, textile and metal trades. Transportation workers and building tradesmen were also more fully engaged, but the percentage of idleness reported by fishermen was considerably larger than that registered in October, 1924.

Unemployment in the manufacturing industries during November was 8.3 per cent lower than in the corresponding month of 1924. The garment and glass trades were much busier, and improvement was also shown by papermakers, printing tradesmen and iron and steel workers. The situation in the building trades and in the transportation industry was slightly more favourable. Miners were decidedly busslightly more active, slackness in the shipping and stevedoring division being offset by greater activity in the steam railway division. Employment for unions in the building trades was brisker than during December, 1924, and the situation in the coal mines also improved. Lumber workers and loggers reported considerable slackness, but fishermen in both months under review registered no unemployment.

The accompanying tabulation (Table II) shows the percentages of unemployment for the months of October, November and December for all Canada, and also by provinces for the month of December. For this month reports were received from 1,556 locals with an aggregate membership of 148,922 persons, of whom 11,716 or a percentage of 7.9 were unemployed.

TABLE II—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Month	Fishing	Lumbering and logging	Mining	Manufacturing industries	Vegetable products	Pulp and paper products	Pulp and paper mills	Printing, publishing and lithographing	Wood products	Fibres, textiles and textile products	Textile and carpet workers	Garment workers	Hat, cap and glove workers	Animal products	Iron and its products	Non-ferrous metals	Clay, glass and stone products	Mineral products	Miscellaneous manufacturing industries	Building and construction	Transportation	Shipping and stevedoring	Steam railway operation	Local transportation	Communication	Telegraph operation	Telephone operation	Trade (retail shop clerks)	Services	Governmental	Miscellaneous	All occupations

and of almost 7 per cent in the placements effected in regular and casual employment. An able than during the corresponding period of analysis of the different industries shows that the groups in which the larger gains were registered were manufacturing, transportation, construction and maintenance, services and trade, while the only marked decline registered was in the farming industry, due to the fact that harvesting operations were carried on much later in the year 1924 than during the corresponding period of 1925. All provinces except New Brunswick and Manitoba registered gains in opportunities offered,

while Manitoba alone showed a slight decline in the number of placements effected. The accompanying table gives the vacancies and placements of the Employment Service of Canada by industrial groups in the various provinces during the period October to December, 1925.

From the chart on page 176 which accompanies the article on the work of the employment offices for the month of December, it will be noted that the trend of the curves representing the ratio of vacancies and placements to applications, though showing a sharp decline during the months of October and November, registered an upward trend during December and at no time reached the low level shown during the same period of 1924. During the period October to December, 1925, there was a ratio of 73.8 vacancies and 69.3 placements for each 100 applications for employment as compared with 67.8 vacancies and 62.6 placements during the corresponding period a year ago. The average number of applicants registered daily during October to December, 1925, was 1,607; of positions offered 1,185 and of placements effected 1,113 in contrast with a daily average of 1,666 applications, 1,130 vacancies and 1,042 placements in regular and casual employment during the last quarter of 1924.

During the three months, October to December, 1925, the offices of the Service reported that they had made 89,416 references to positions and had effected a total of 85,698 placements, of which 59,674 were in regular employment and 26,024 in casual work. Of the placements in regular employment 50,022 were of men and 9,652 of women, while casual work was found for 14,409 men and 11,615 women. A comparison with the same period of 1924 shows that 80,231 placements were then made, of which 55,930 were in regular employment and 24,301 in casual work. Applications for employment during the period under review were received from 94,759 men and 28,923 women, a total of 123,682 in contrast with the registration of 128,247 during the same period of 1924. Employers notified the Service during the fourth quarter of 1925 of 91,238 positions, of which 66,663 were for men and 24,575 for women, as compared with 86,981 opportunities for work offered during the corresponding period of 1924.

In another section of this issue will be found a report in detail of the transactions of the employment offices for the month of December.

EMPLOYMENT OFFICE REPORTS FOR DECEMBER, 1925

THE records of the Employment Service of Canada for the month of December, 1925, when compared with those of November, showed a decline of 26 per cent in the volume of business transacted, due to curtailment of operations in the farming, manufacturing and construction groups, and to the fact that the logging camps had, for the most part, received their quota of men during the previous month. A decline of 2 per cent was also recorded when the records were compared with those of December, 1924.

The accompanying chart shows the trend of employment since January, 1923, as represented by the ratio of vacancies offered and placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be noted that although the labour turnover during December, 1925, was somewhat less than that of the preceding period, the upward trend of the curve of vacancies and placements in relation to applications showed more opportunities offered in proportion to applicants looking for work, and that the situation generally was considerably better than that shown at the close of December, 1924. The ratio of vacancies to each 100 applications was 63.2 and 70.6 during the first and second half of December, in contrast to the ratio of 60.8 and 64.2 during the same period in 1924. The ratio of placements to each 100 applications during the period under review was 59.7 and 66.2, as compared with 55.3 and 58.9 during the corresponding month of 1924.

A summary of the reports from the offices showed that the average number of applications reported during the first half of December, 1925, was 1,409 as compared with 1,595 during the preceding period, and with 1,452 daily in the corresponding period of 1924. Applications for work during the latter half of the month registered 1,115 daily, in contrast with 1,408 during the latter half of December a year ago. Employers notified the Service of a daily average of 890 vacancies during the first half, and 787 during the latter half of the month under review, as compared with a daily average of 883 and 903 vacancies during the month of December, 1924. Vacancies offered to the Service during the latter half of Novem-

ber, 1925, averaged 1,010 daily. The Service effected an average of 841 placements during the first half of December, of which 575 were in regular employment and 266 in work of one week's duration or less, as compared with a total average placement during the preceding period of 934 daily, and with 803 daily during the first half of December, 1924. During the latter half of the month under review placements averaged 738 daily (444 regular and 294 casual), as compared with an average of 829 daily during the corresponding period of 1924.

During the month of December, 1925, the offices of the Service referred 21,390 persons to vacancies and effected a total of 20,523 placements. Of these the placements in regular employment were 13,239, of which 10,443 were of men and 2,796 of women, while the placements in casual work totalled 7,284. The number of vacancies reported by the employers numbered 14,510 for men and 7,287 for women, a total of 21,797, while applications for work totalled 32,802, of which 24,822 were from men and 7,980 from women.

The following table gives the placements effected to date in the offices of the Employment Service of Canada:—

Year	Placements.		Totals
	Regular	Casual	
1919 (10 months).....	268,001	37,904	305,905

1925.....	306,804	106,021	412,825

MARITIME PROVINCES

Orders listed at employment offices in Nova Scotia and New Brunswick during the month of December were nearly 3 per cent less than during the preceding month, and over 5 per cent less than during December, 1924. Gains of more than 2 per cent in comparison with November, and over 13 per cent when compared with December, 1924, were reported by Nova Scotia offices, but these gains were more than offset by losses of over 6 per cent and nearly 16 per cent respectively, reported by New Brunswick offices. Nova Scotia offices effected nearly 5 per cent less placements than during November, and recorded a nominal decrease only when compared with December, 1924. Placements by New Brunswick offices were about 8 per cent below November, and were more than one per cent higher than during December, 1924. There was a net gain of nearly one per cent in placements effected by both provinces during the month under review when compared with the corresponding month of 1924. Industrial groups in which employment was secured for most applicants in Nova Scotia were manufacturing, 165; logging, 62; construction and maintenance, 80; service, 182, and trade, 53; and in New Brunswick, logging, 109; and services, 467, of which 279 were household workers. During the month of December 187 men and 90 women were placed in regular employment through Nova Scotia offices, and 215 men and 96 women through offices in New Brunswick.

QUEBEC

Employment opportunities as listed at offices of the Service in the Province of Quebec were nearly 30 per cent less than in November, but over 80 per cent higher than during December, 1924. Gains under the latter comparison were recorded in all industrial divisions except trade, in which group the decline was nominal only. Placements were nearly 35 per cent below November and over 56 per cent higher than during December, 1924. Industrial divisions in which most of the placements were effected were manufacturing, 99; logging, 346; transportation, 134; construction and maintenance, 249; services, 597, and trade, 62. Regular employment was secured for 861 men and 562 women during the month under review.

ONTARIO

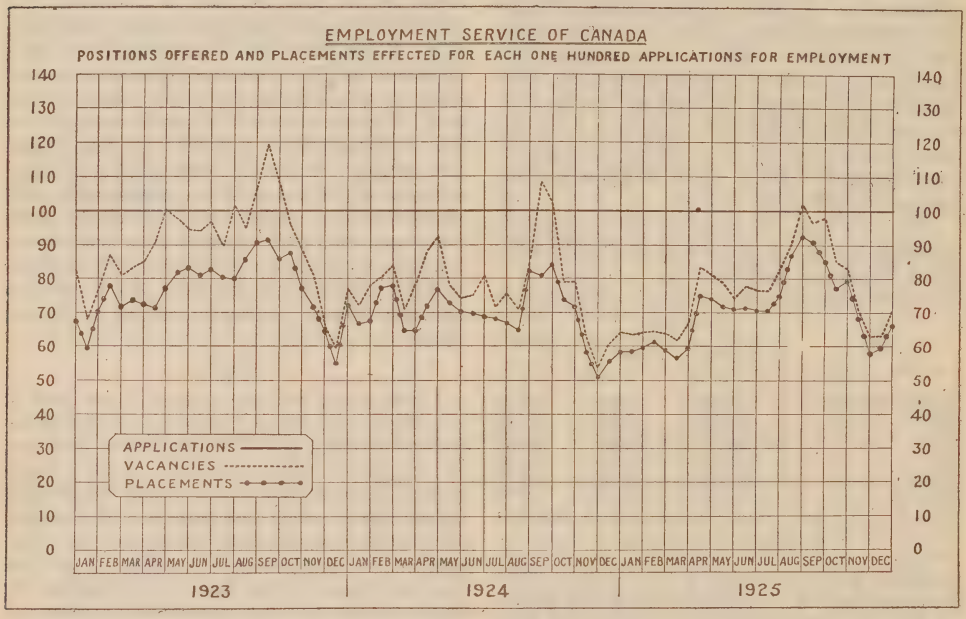
There was a decline of about 7 per cent in the number of orders received during December when compared with November, and also in comparison with December, 1924. Placements, however, were only about 2 per cent lower under each comparison. Placements in regular employment increased in comparison with December, 1924, but this increase was offset by a reduction in the demand for casual workers. Industrial groups in which employment was secured for most of the workers were manufacturing, 1,014; logging, 1,862; farming, 429; transportation, 483; construction and maintenance, 2,605; services, 3,221, and trade, 371. Placements in regular employment numbered 5,789 of men and 873 of women.

MANITOBA

Orders listed at Manitoba offices during December were 20 per cent below November and over 12 per cent less than during December, 1924. Placements were about 25 per cent lower than in November and 9 per cent less than in December, 1924. Declines in vacancies and placements were recorded in all industrial divisions except construction and maintenance, services and trade when comparing the month

under review with the corresponding month of 1924. Placements by industries included manufacturing, 52; logging, 462; farming, 421; services, 1,435, and trade, 153. Regular employment was secured for 969 men and 447 women during the month.

SASKATCHEWAN



There was a decline of nearly 40 per cent in the number of vacancies listed by Saskatchewan offices during December when compared with the preceding month, but an increase of over 8 per cent in comparison with December, 1924. Placements were nearly 44 per cent less than in November, but over 12 per cent in excess of December, 1924. Increased demand for bushmen, farm and household workers was was mainly responsible for the increase over December, 1924. Industrial groups in which most of the placements were effected during the month were logging, 207; farming, 614; construction and maintenance, 104, and services, 661. Regular employment was secured for 956 men and 260 women.

ALBERTA

Employment offered through Alberta offices during December was about 52 per cent less than in November and over 27 per cent less than during December, 1924. Approximately the same percentages of change were recorded in placements effected. Reductions in placements under both comparisons were general in all industrial groups, the most noteworthy change being the seasonal decline in the demand for farm workers from November to December. Placements by industries included manufacturing, 101; logging, 228; farm, 377; mining, 91; construction and maintenance, 68, and services, 544. There were 836 men and 255 women placed in regular employment during the month.

BRITISH COLUMBIA

Orders listed by British Columbia offices during December were nearly 14 per cent less than in November and nearly 22 per cent below December, 1924. Placements were over 12 per cent and 18 per cent lower respectively. Small gains over December, 1924, were recorded in farming, mining, transportation and construction and maintenance, but were offset by losses in the manufacturig industries, logging, services and trade. Industrial groups in which most of the placements were effected during the month were manufacturing, 185; logging, 238; transportation, 101; construction and maintenance, 277; services, 889, and trade, 97. There were 630 men and 213 women placed in regular employment during the month.

Movement of Labour

During December, 1925, the offices of the Employment Service of Canada made 13,239

*19 placements effected by offices since closed.

placements in regular employment, of which 6,720 were persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 1,317 were granted the Employment Service reduced transportation rate, 692 going to points within the same province as the despatching office and 625 to other provinces. The reduced transportation rate which is 2.7 cents per mile with a minimum fare of $4 is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

The transportation certificates issued by Quebec offices numbered 112, all to points outside the province. Of these, Hull despatched 109 bushmen to the lumber camps in the vicinity of North Bay and Cobalt, and Montreal 3 bushmen to Sault Ste. Marie. The offices in Ontario granted 514 certificates, 350 provincial and 164 interprovincial. The provincial movement included 295 bushmen going to points near Fort William, Port Arthur, Sudbury, Timmins, Pembroke and Peterboro. From Toronto 1 civil engineer, 1 chainman and 1 counter man were transferred to North Bay, 1 rod man to Pembroke and 1 baker to Sault Ste. Marie. To the Port Arthur zone 34 construction labourers were despatched by the Fort William and Port Arthur offices and to North Bay 8 construction labourers travelled from Pembroke. Timmins received 2 plasterers from North Bay and 4 hand drillers from Cobalt, and Kingston 1 loom fixer from Hamilton. Sudbury sent 1 cook within its own zone. The interprovincial movement was all to Hull from the Sudbury, North Bay, Pembroke, Cobalt and Port Arthur offices and included 58 bushmen, 28 station workers, 37 railroad labourers, 40 construction labourers and 1 plasterer. All Manitoba certificates were issued from Winnipeg. This office despatched 431 persons at the special rate, 72 farm workers going to various points throughout the province, 2 bushmen and 1 housekeeper to Dauphin, 1 housekeeper within the Winnipeg zone and 1 farm general, 2 waitresses, 4 housekeepers, 1 cook and 2 kitchen maids to Brandon. Of the 345 interprovincial transfers, 324 were bushmen, 320 going to Port Arthur and 4 to Timmins; 12 were farm labourers sent to points in Saskatchewan, 1 a farm hand sent to Prince George and the remainder hotel and household workers. Saskatchewan offices transferred 154 workers on the reduced transportation rate, 1 of whom was a farm hand sent from Regina to Brandon and the balance represented a provincial movement. Of the latter 104 bushmen, 7 lath bolt cutters, 3 sawyers, 1 engineer, and 2 cooks travelled at the reduced rate to the Prince Albert zone from the North Battleford, Regina, Saskatoon and Prince Albert offices, and 28 farm labourers, 3 hotel workers, 2 housekeepers, 1 domestic and 2 cooks were sent to various points within the province. In Alberta the transportation certificates numbered 71, of which 69 were for points within the province. Calgary sent 2 farm labourers and 3 bushmen to Edmonton, 2 miners and 1 bushman to Lethbridge, and 2 farm labourers to Drumheller. From Edmonton 20 miners, 11 bushmen, 6 farm hands, 5 labourers, 5 firemen, 3 engineers, 1 dairyman, 1 lather, 1 plumber, 1 waitress, 1 watchman, 3 cooks and 1 carpenter went to points within the Edmonton zone, and 2 farm labourers to employment in Saskatchewan. British Columbia offices issued 35 certificates, 34 provincial and 1 interprovincial. The latter was a seedsman sent from Vancouver to Brandon. In addition Vancouver transferred provincially 1 labourer and 1 blacksmith to Nelson, 1 engineer, 1 blacksmith and 1 dishwasher to Penticton, 1 farm hand to Kamloops, 1 engineer to Prince George and 8 miners, 1 logger and 1 engineer within its own zone. Prince George transferred 1 dredgemen, 1 cook, 5 tile makers and 2 general labourers, and Prince Rupert 3 bushmen and 3 miners to employment within their respective zones. New Westminster shipped 1 miner to Revelstoke, and Cranbrook 1 millwright to Prince George.

Of the 1,317 workers who benefited by the Employment Service reduced transportation rate, 944 were carried by the Canadian National Railways, 345 by the Canadian Pacific Railway, 23 by the Timiskaming & Northern Ontario Railway, and 5 by the Pacific Great Eastern Railway.

Over 24,000 employees of the Canadian Pacific Railway have received instruction in First Aid, since such training was first provided under the direction of the late Lord Shaughnessy. Company officials believe that more than one employee of the company would be ready and qualified to render assistance in the event of an accident anywhere on the system.

The Drumheller branch of the United Mine Workers of America passed a resolution in January asking the Dominion Government to grant a railway freight rate of $7 per ton from Alberta to Ontario. The resolution states that "there are hundreds of men, women and children in the coal fields of Alberta on the verge of starvation due to lack of employment."

REVIEW OF BUILDING PERMITS ISSUED IN CANADA DURING 1925

THE value of the building permits issued in 60 cities last year was practically the same as in 1924, but when the lower cost of building materials in 1925 as compared with the preceding year is considered, there is no doubt that the volume of building in the cities was greater than in 1924. The aggregate for the year, based upon revised statements from municipal officials, was $124,661,720; this was $634,126 or 0.5 per cent less than the 1924 total of $125,295,846. The average index number of building materials, however, declined from 159.1 in 1924 to 153.7 in 1925, or by over 3 per cent, while the index number of wages in the building trades, compiled by the Department of Labour, averaged 170.4 as compared with 169.7 in 1924, the base, or 100 per cent, in both cases being the 1913 costs[1].

While building permits issued in the 60 co-operating cities aggregated practically the same in 1925 as in 1924, the index number of employment in building construction, based upon returns from some 300 contractors employing an average pay-roll of 23,000 persons averaged 121.1 in 1925 as compared with 113.7 in 1924. According to the *MacLean Building Review* for January, 1926, the value of contracts awarded throughout Canada was $297,973,000 in 1925, as compared with $276,261,100 in the preceding year, an increase of 7.8 per cent. A large share of this gain was in industrial building such as power plants and pulp and paper mills and other construction work which would, generally, be outside city limits and therefore would not be reflected in these building permits.

The value of the building permits issued in 60 cities during the last six years is given below:—

Year.	Value.	Average index number of wholesale prices of building materials
	$	
1920	116,779,628	214·9
1921	116,361,720	183·2
1922	147,962,173	162·2
1923	133,201,347	167·0
1924	125,295,846	159·1
1925	124,661,720	153·7

[1] In connection with these index numbers, it may be noted that the average cost of all the materials used in building by a prominent construction company of Canada is estimated at 55·13 per cent and of all labour as 28·23 per cent of the total cost, the remaining 16.64 per cent being ascribed to overhead insurance, engineering, supervision, profit, etc. In the United States, according to the Monthly Labour Review for July, 1925, similar estimates based upon eight types of building, show that materials and labour there account for 42·88 per cent and 36·99 per cent respectively, of total costs.

During 1925 there were declines of 0.5 per cent, 6.4 per cent and 15.7 per cent as compared with 1924, 1923 and 1922, respectively, but increases of 7.1 per cent and 6.7 per cent over 1921 and 1920, respectively.

Building by Provinces

Nova Scotia, Ontario, Manitoba and British Columbia registered increases in the value of the building permits issued, as compared with 1924, but there were declines in the remaining provinces.

Maritime Provinces.—In Nova Scotia, with permits valued at $1,099,787, there was an increase of 22 per cent over 1924, which in turn had shown a gain as compared with the preceding year. The building authorized in New Brunswick, however, was estimated to cost $986,325, as against $1,492,364 in 1924, a decline of 33.9 per cent. The 1925 aggregate was also less than in 1923.

Quebec.—Authority was granted for construction estimated at $35,186,268 in Quebec; this was less by $7,376,068 or 17.3 per cent than the 1924 total, which was the highest since the record for the 60 cities was begun in 1920. As compared with the aggregate of $35,483,853 in 1923, there was a falling off of 0.8 per cent in the building permits issued, but the index number of wholesale prices of building materials then averaged over 13 points higher than in 1925. The six cities reporting in Quebec issued 28.2 per cent of the total value for the 60 cities in 1925, as compared with 34.4 per cent of the aggregate in the preceding year.

Ontario.—The 30 co-operating cities in Ontario issued permits valued at $59,888,867 as against $57,330,141 in 1924, or an increase of 4.5 per cent. The total was also greater than in 1921 or 1920 but it was lower than in 1923 or 1922. The proportion of the aggregate for Ontario to that for the 60 cities rose from 45.1 per cent in the preceding year to 48.0 per cent in 1925.

Prairie Provinces.—Building in Manitoba, as reflected in the permits issued in three cities, was at a higher level in 1925 than in 1924, the authorizations of $5,205,828 showing a gain of $1,338,726 or 34.6 per cent in that comparison. There was also an increase over the 1923 aggregate of $5,177,487, but declines in comparison with 1922, 1921 and 1920. In Saskatchewan, there was a decline of 11.4 per cent in the building authorized, which in 1925 was estimated at $2,531,380; with the exception of 1923 (than which it was 5.2 per cent higher), this was smaller than in any other of the post-war years, when building costs

were greater. The four cities included in Alberta reported building valued at $2,862,260 in the year under review, or 22.5 per cent less than the total of $3,695,604 in 1924, which included the permit for a grain elevator at Edmonton costing over a million. If the value of this authorization is taken from the 1924 aggregate, the 1925 total is 19.5 per cent higher than the preceding year's. The three Prairie Provinces together recorded 8.5 per cent of the total for the 60 cities.

British Columbia.—There was an increase over 1924 of $4,320,617 or 34.4 per cent in the building authorized by seven cities in British Columbia. The aggregate of $16,879,205, or 13.5 per cent of the 1925 total for the 60 cities, was greater than in any year since 1920, being 17.6 per cent in excess of the previous high level of $14,351,058 in 1922.

Building by Cities

Statistics of building permits issued by 60 cities since 1918 are given in Table I, while Table III is a record for the four largest centres since 1910.

Toronto.—The building permits issued by Toronto were valued at $25,797,196 or 7.8 per cent more than in 1924; of this total, which was the largest aggregate for any city during 1925, some 59 per cent was designed for the construction of dwellings. The Townships of York, which are adjacent to and practically form a residential suburb of Toronto, reported building authorized at an estimated cost of $6,611,440; this figure, added to the Toronto total, gives an aggregate for that metropolitan area of $32,408,636, of which $20,489,100 or 63.2 per cent was listed for the construction of dwellings.

Montreal.—This city reported the second highest total, $25,520,523, of which 56.6 per cent was for residential building. Of the aggregate of $2,904,524 recorded by Westmount, 58.9 per cent was for dwellings. These adjoining cities together authorized building valued at $28,425,047, of which 56.8 per cent was designed for dwellings. The Montreal total was 17.7 per cent less than in 1924 and 5.9 per cent less than in 1923, but it was higher than in any other year since 1910, with the exception of 1913.

Vancouver, with $7,964,375, showed the third greatest total, which since 1913, was only exceeded by the permits for 1922 and was 27.8 per cent greater than in 1924. The proportion of the value of building authorized for dwellings was only 42.3 per cent in Vancouver. This percentage is, however, increased to 55.6 when the Point Grey total of $5,080,000 is added to that of Vancouver, of which the former is practically a suburb. Permits for dwellings in Point Grey constituted 87.5 per cent of the total value of building authorized.

TABLE 1.—ESTIMATED COST OF BUILDING WORK AS INDICATED BY THE VALUE OF BUILDING PERMITS ISSUED IN 60 CITIES.

South Vancouver	1,032,690	618,662	712,275
*Vancouver	7,964,375	6,230,774	6,277,574
*Victoria	547,517	838,103	1,050,160
Total—60 Cities	124,661,720	125,295,846	133,201,347
*Total—35 Cities	101,021,798	105,070,284	111,174,325

Winnipeg issued permits valued at $4,156,690, an increase over 1924 of 2.5 but a decline of 7.3 per cent as compared with 1923. The aggregate was also smaller than in 1922, 1921 or 1920, although it exceeded that for any other year back to 1914. Residential building accounted for 55.7 per cent of this total. St. Boniface, just across the river from Winnipeg, authorized building estimated at $972,559 during the year. The building projected in this vicinity was, therefore, valued at $5,129,249 or 42.6 per cent more than in 1924. Only 21.7 per cent of the St. Boniface aggregate for last year was listed for dwellings.

In *Ottawa,* building to the value of $4,942,327 was authorized; this was 94.5 per cent higher than in the preceding year and 40.3 per cent greater than in 1923. *Windsor* issued permits valued at $4,333,945, while for the combined Border Cities—Windsor, Ford, Riverside, Sandwich and Walkerville—the total was $8,114,905, or 1.3 per cent less than in 1924. In Quebec city, building to the value of $3,274,371 was authorized, but this was a falling off of 55.3 per cent as compared with the preceding year; practically 40 per cent of the 1925 total was for dwellings.

In addition to the above, permits valued at over $2,000,000 were issued by Westmount, Hamilton, London and Three Rivers, while Kitchener, Edmonton, Prince Rupert, Sandwich, Regina, Calgary, Niagara Falls, Ford, Saskatoon, Sherbrooke, Halifax and South Vancouver reported building permits valued at over a million. The cities given above are in order of value authorizations, in all cases.

The following cities reported increases in the building authorized during 1925 as compared with 1924: Halifax, New Glasgow, Moncton, Shawinigan Falls, Sherbrooke, Three Rivers, Westmount, Guelph, Kitchener, London, Niagara Falls, Ottawa, Owen Sound, St. Thomas, Toronto, York Townships, Riverside, Sandwich, St. Boniface, Winnipeg, Regina, Calgary, Nanaimo, New Westminster, Prince Rupert, Point Grey, South Vancouver and Vancouver.

Building by Months

The building permits issued in April and May, $15,442,855 and $15,500,165, respectively, were higher than in any other month, together constituting 24.8 per cent of the total for 1925. During 1924 the aggregates for September and May were greatest, but on the average, the permits issued in May exceed those for any other month.

Building by Types of Buildings

Some 50 cities furnished detailed reports showing the number and value of permits granted for dwellings, other buildings and engineering contracts. Over 16,000 permits were issued for dwellings, valued at $6,565,000, an average of $4,096 per dwelling. This category includes houses and apartments, and in many, but not all cases, repairs and alterations to the same. The authorizations for other buildings, numbering approximately 26,000, were valued at over $50,500,000, or an average of $1,936 per building. Permits for garages form a considerable percentage of the total number, but their value is usually low.

Building since 1910

The value of the building permits issued in the 35 cities originally used in these compilations was $101,021,798, as compared with $105,070,284 in 1924; this was a decline of $4,048,486 or 3.9 per cent, as against a reduction of 0.5 per cent for the 60 cities in the same comparison. The growth of satellite cities and surburban areas, owing to the continually increasing ease of transportation and the desire of many persons to enjoy the benefits of less crowded districts as well as those of lower taxation, are reflected in this difference at the expense of the 35 cities. In 1920 the value of the permits issued in these original cities constituted 86.2 per cent of the total for the 60 cities, while in 1925 it was only 81.0 per cent; if statistics for the 60 areas now included were available as far back as 1910, no doubt the proportion reported by the 35 original centres would be considerably higher than in the last few years, which have seen an enormous expansion in the use of automobiles and suburban electric lines. (The number of motor vehicles registered in all provinces rose from 8,967 in 1910 to 652,121 in 1924.). The 1925 aggregate for the 35 cities was also lower than in 1923, 1922 and any of the pre-war years except 1910, but it exceeded the total for any year between 1921 and 1914. As was noted earlier in this review, the index number of wholesale prices of building materials (1913–100) declined from 159.1 in 1924 to 153.7 in 1925, or by more than 3 per cent, when it was lower than in any year since 1918.

Table II gives, by provinces, the value of the building permits issued in the 35 cities originally used in these compilations as well as index numbers of costs of building materials and of wages in the building trades.

The value of the building permits issued in Montreal, Toronto, Winnipeg and Vancouver together aggregated $63,438,784, a decrease of 1.4 per cent as compared with the 1924 total of $64,348,121. Of these centres, Montreal

alone registered a reduction in that comparison. The proportion of the building authorized in these cities to the total for the 35 cities, 62.8 per cent, was higher than in any other year of the record except 1910.

When the estimated cost of building authorized in the "satellite cities" in the immediate vicinity of the four leading cities is added, the value of building permits issued in the four metropolitan areas was $79,007,307 in 1925; this was an increase of 2.4 per cent over the 1924 total of $77,139,804.

TABLE II.—ESTIMATED COST OF BUILDING WORK IN THE YEARS 1918-1925, AS INDICATED BY BUILDING PERMITS ISSUED IN 35 CITIES.

Building Permits Issued in December, 1925

The value of the building authorized during December was seasonally, though only slightly lower than in the preceding month; it was however, higher than in the corresponding month of 1924. The aggregate was $7,191,830, or 6.6 per cent less than the November total of $7,696,099, but 13.6 per cent higher than the aggregate of $6,333,619 in December, 1924.

Detailed statements were furnished by some 35 cities, which issued permits for nearly 500 dwellings valued at almost $2,200,000, and for approximately 600 other buildings, estimated to cost some $2,100,000.

Nova Scotia, New Brunswick, Ontario and Saskatchewan registered increases in the value of the permits issued; that of $316,122 or 8.5 per cent in Ontario was the greatest absolute gain, but the proportional increase in New Brunswick was larger. Of the declines recorded elsewhere, those of $503,933 or 18.8 per cent in Quebec, and $140,141 or 76.3 per cent in Alberta were most pronounced. As compared with December, 1924, Alberta recorded a reduction of $8,985 or 17.1 per cent, while in the remaining provinces there were gains, of which Ontario and British Columbia reported the largest—$331,771 or 9.0 per cent and $314,720 or 82.1 per cent, respectively.

Montreal and Winnipeg showed decreases in the value of the building permits issued as compared with November, 1925, but increases as compared with December, 1924, while Toronto and Vancouver registered improvement in both comparisons. Halifax, Sydney, Moncton, St. John, Sherbrooke, Chatham, Galt, Knigston, Kitchener, London, Sarnia, Regina, Saskatoon, Lethbridge, Nanaimo, Prince Rupert and South Vancouver also recorded increases as compared with November, 1925, and December, 1924.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Printing and Publishing

OTTAWA.—THE CITIZEN PUBLISHING COMPANY AND INTERNATIONAL STEREOTYPERS' AND ELECTROTYPERS' UNION, No. 50.

Agreement in effect from August 1, 1922, until August 1, 1924, and from year to year with ninety days' notice of change prior to August 1 of any year.

Wages per week, day or night work, journeymen, $36.

Overtime, time and one-half. Sundays and holidays, when no paper is published, double time.

One apprentice to each shift; term of apprenticeship, five years.

Scale for apprentices, per day or night: first year, $1.50; second year, $2; third year, $2.50; fourth year, $3; fifth year, $3.50.

Foreman in dismissing a man shall give him one week's notice or one week's pay. A man wishing to leave shall give one week's notice.

In case of any misunderstanding about the agreement the question shall be settled by arbitration, each party to appoint a man, and these two to appoint a third. If this is impossible the Minister of Labour shall appoint a third. The majority decision of the Board shall be binding on both parties.

The union agrees to furnish sufficient and competent help.

Present conditions and hours of work to continue as long as hours do not exceed forty-eight per week.

OTTAWA.—OTTAWA NEWSPAPER PUBLISHERS AND INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, No. 5.

Agreement in effect from September 2, 1923, to September 2, 1925, and thereafter.

Salary of foremen and flyboys to be arranged with employer.

Wages per week, journeymen pressmen, from September 2, 1923, to September 2, 1924, $39; thereafter, $40.

Nothing in the agreement shall prevent superior workmen from getting higher wages. Everyone who has served five years at web press work shall receive at least this scale and must be a union member.

Apprentices' wages per week: 3rd year, $17; 4th year, $20; 5th year, $22. An apprentice who has completed his time and received certificate and cannot find employment may continue as an apprentice.

Hours per week, 48. Overtime, time and one-half. Work on legal holidays for evening papers, between 7 a.m. and 6 p.m., double time.

Present conditions as to hours and arrangements of work are to continue as long as staff does not work on both night and day shift.

Principle of interchanging of positions of men on web machines is to be adhered to so they may become qualified pressmen.

The contract prohibits strikes or lockouts so long as the terms of the agreement are carried out. In case of any misunderstanding the question must be settled by arbitration, the board consisting of one member appointed by each party and a third chosen by them. The award shall be binding.

If a proposition to renew the agreement is made and matter is not settled it shall be referred to arbitration.

Manufacturing: Vegetable Foods, Drink, and Tobacco

EDMONTON, ALBERTA.—THE EDMONTON BREWING AND MALTING COMPANY LIMITED, AND THE INTERNATIONAL UNION OF THE UNITED BREWERY, FLOUR, CEREAL AND SOFT DRINK WORKERS OF AMERICA.

Agreement to be in effect from August 1, 1925, to July 31, 1926, with thirty days' notice of change.

Employees must become members of the union within two weeks of date of employment. No member shall be discharged or discriminated against for upholding union principles, or for working on a committee or under the instruction of the union. No union member shall be laid off without just cause.

Extra men engaged during the busy season shall not be counted as permanent men, nor be taken into the union if working less than three months, and must be laid off after work is finished.

Engineers, firemen, and general mechanics should be members in good standing of their unions. Company may hire extra help from April 1 until September 30, hiring returned soldiers when available, provided no union men are out of work.

In reduction of staff during dull season, men shall be laid off not longer than one week at a time.

There may be an apprentice in the brewing, bottling and malt-house departments; apprentices shall be not more than twenty years of age when beginning and shall serve for two years.

Upon recovery after sickness men shall be reinstated if sickness has not lasted longer than three months, and provided employee was employed for six months.

Hours, eight per day for five days, and five on Saturday, during October to March inclusive. During remainder of year, hours, nine, and five on Saturdays. This shall apply to all except engineers, firemen, truck drivers, teamsters and malt-house men.

Engineers and firemen, 8 hours per day, 7 days per week. Overtime time and one-half. Engineers to do their own repairing.

Truck drivers, teamsters and helpers shall care for their horses Sundays and holidays. Route drivers shall be responsible for their routes.

Hours for beer peddlers, teamsters and helpers and truck drivers, nine hours, six days per week. Overtime, time and one-half.

Union to furnish union label free.

Subject to legal requirements, free beer will be allowed to employees four times per day. Any man drinking to excess will be liable to immediate discharge.

Employees shall receive beer at special prices, as specified in the agreement.

Differences about interpretation of the agreement shall be referred to a Board of Arbitration of two from the union and two from the firms concerned. Should these four fail to agree they shall elect a fifth disinterested party. The decision of a majority shall be binding.

The brewery is to give preference to union-made material and machinery where obtainable.

Overtime, time and one-half; Sundays and holidays, unless otherwise specified, double time.

Men employed two years shall have one week's holiday per year with pay.

Wages per hour: second engineer, 68 cents; third engineer, 63 cents; firemen, 58 cents; coopers, tight, 65 cents; coopers, slack, 62 cents; truck drivers, 60 cents; filler man, soakerman, labelling man, 58 cents washhouse man, first, 60 cents; first brewhouse man, first cellar man, 65 cents; cellar and brewhouse helpers, after 6 months, 55 cents; labourers, temporary, 45 cents; labourers, permanent, 52 cents; apprentices, 1st year, 40 cents; 2nd year, 45 cents; women, 30 cents.

Transportation: Water

VANCOUVER, BRITISH COLUMBIA.—SHIPPING FEDERATION OF BRITISH COLUMBIA AND VANCOUVER AND DISTRICT WATERFRONT WORKERS' ASSOCIATION.

Wage sch dule effective December, 1924, and revised December, 1925. This schedule is attached to the agreement between the above parties, summarized in the LABOUR GAZETTE for April, 1925.

Base wages, per hour—dock men, straight time, 80 cents; overtime, $1.20; shipmen (5 per cent increase in wages from December 1, 1925) straight time, 84 cents; overtime, $1.26.

Ten cents per hour above base wages is paid to double winch drivers and donkey drivers and to men handling 25 tons or over of caustic soda, cement, green hides or animal fertilizer; lime in single sacks; sulphur; coal or coke, ore, ballast and grain in bulk; and to men loading, ship only, on sacks weighing 125 pounds or over, truckers excepted. This applies to men loading lumber in the following instances: creosoted products, working on lumber and piles from the water; hatch tenders and side runners.

Twenty cents per hour above the base rate to: double winch drivers, hatch tenders, side runners, boommen and sling men when working on lumber and piles from the water; hatch tenders and side runners on creosoted products.

In none of the above items shall the employer pay a double penalty.

Ten cents per hour above the base wage to men in refrigerators or below deck in connection with refrigerators when cargo is being discharged from or loaded into refrigerators, containing commodities frozen for preservation.

High explosives, $1.20 per hour straight time; $1.80 per hour overtime.

Damaged cargo, $1.20 per hour straight time and $1.80 per hour overtime, for handling part of cargo badly damaged or offensive.

Men shifting cargo, $1.50 per hour while working; 75 cents per hour when travelling or standing by. Free transportation and free meals on board when not permitted to go ashore.

Hours—straight time between 8 a.m. and 5 p.m. except Sundays and holidays. Work to be arranged on election day so that men shall be enabled to vote.

Work during any meal hour, time and one-half (of straight time or overtime).

The employer may pick his own employees. The employers are to give one hour's notice before picking gangs. For 8 a.m. gangs on Sundays and holidays, notice to be given at or before 5 p.m. on previous day.

Special provisions are made for standing by when no work is provided.

When men are on a job between 8 a.m. and 5 p.m. and such is suspended, time continues except when shifting ship, when ship is allowed one hour's time.

Minimum working time: If work begins but does not last two hours, and men are released, they shall be allowed two hours' pay. For any work between 1 a.m. and 5 a.m., not less than four hours' pay at overtime rate. No less than two hours' pay for work performed in any one day. When men have worked two hours or more before the noon meal hour, not less than one hour's pay to be received if ordered back after meal hour. When men have worked less than two hours before noon meal hour and are ordered back, they shall receive not less than two hours' pay after meal hour.

Travelling time (half rate) and transportation both ways to be allowed to men furnished from Vancouver. Men shall furnish their own meals and lodging.

Men provided from Vancouver to work at outports, to have fare paid both ways and half the cost of board and lodging, men's share not to exceed one dollar per day. At outports, half time to be allowed for standing by during work hours. Employer or his foreman shall decide size of gangs.

Instant dismissal for pilferage.

In case of question arising as to the interpretation of this schedule, there shall be no stoppage of work, and should dispute not be satisfactorily adjusted, the Federation will be prepared to appoint a committee to meet a committee representing the men, to discuss and adjust the dispute.

Communication—Telephones

WINNIPEG, MANITOBA.—MANITOBA TELEPHONE SYSTEM AND INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, NOS. 1037 AND 435.

Agreement in effect from May 1, 1925, until May 1, 1926, and thereafter, unless changes proposed on thirty days' notice.

No discrimination for union membership or activity.

Each local shall appoint three to act as a standing grievance committee. Grievances shall be stated in writing to the committee, which shall have right of appeal to the Superintendent on behalf of the employee. If it is decided employee has been unjustly dealt with he shall be reinstated and paid for time lost. If decision is unsatisfactory to the committee appeal may be made to the Commissioner.

When new employees are engaged preference shall be given to union members.

Hours per week: on city and exchange work, 44; for provincial construction and maintenance employees, 48. (This does not apply to district men and trouble men).

On shift work, any eight consecutive hours, except one hour intermission for meals shall constitute a day, as required, inclusive of Saturday afternoons and Sundays. Employees working Saturday afternoons and Sundays will be allowed time off on other days consistent with 44-hour week.

Employees held awaiting orders four hours or less shall be paid for four hours, and waiting over four hours, for eight hours, except when relieved due to their own request or to weather conditions. Employees who are to report on Sundays and holidays shall receive not less than two hours' pay, regular or overtime.

The Telephone Department shall furnish tools and badges. In case of loss of same due to negligence, employees will be held responsible.

Overtime after eight hours, time and one-half. From midnight till 8 a.m. and Sundays and holidays, double time. Overtime shall not apply when coming in regular shift.

Travelling time is to be paid straight rates when occurring during normal working day.

Employees on monthly salary shall be paid overtime only on emergency order.

Employees after twelve months' service, one week's holidays with pay; after two years, two weeks. Holidays shall not be accumulated unless by mutual arrangement.

In out of town work, transportation and allowance of $2.50 per day shall be allowed up to 30 days, this not to apply to men transferred or to travelling gangs.

In case of lay-off, the last men employed shall be first laid off and so on. If more men are required, the last man off shall be given preference of re-employment.

A journeyman shall have served three years at outside work or four years at inside work or shop work.

Except where journeymen are not to be obtained the rate of apprentices to journeymen shall not exceed one to four.

The Manitoba Telephone Commission shall assume all responsibility for and pay loss of wages and costs due to infectious or contagious diseases, contracted by employees or dependents as a result of authorized performance of duties.

New positions will when possible be filled from present employees as agreed upon by the Commission and a committee of employees, having regard for seniority with efficiency.

Employees on monthly schedule must give two weeks' notice of resignation.

Wages per hour: order gang foremen, 94 cents; (journeymen, city), cable splicers, 94½ cents; linemen, 89 cents; troublemen, 94 cents. Foremen (province), 81 cents; sub-foremen, 76½ cents. Journeymen (province), cable splicers, 79½ cents; linemen, 74 cents. Wire chiefs: switchboard men, 92 cents; switchboard men (travelling), 80 cents; installers, 87 cents. Apprentices (inside plant), 1st year, 35 cents; 2nd year, 45 cents; 3rd year, 58 cents; 4th year, 70 cents. Linemen (city outside plant), 1st year, 60 cents; 2nd year, 67 cents; 3rd year, 80 cents. Splicers, 1st year, 60 cents; 2nd year, 70 cents; 3rd year, 85 cents; 4th year, 89 cents. Linemen—outside plant, province, 1st year, 45 cents; 2nd year, 53 cents; 3rd year, 62 cents. Cable splicer helper, 2nd year apprentice, 70 cents. Other employees are paid by the month.

Services: Personal and Domestic

VANCOUVER, BRITISH COLUMBIA.—LOCAL FIRMS AND SOFT DRINK DISPENSERS' UNION, No. 676.

Verbal agreement in effect from May, 1925.

Weekly rate, floormen, $24—48 hours, minimum; tap men $5 per shift of 8 hours minimum.

Any short shift man has the right to work in more than one house on the same day, but he may not work more than 8 hours in any one day.

Proprietors may employ and discharge at will. Help is to be employed at the office of the local when possible.

Complaints are to be made in writing and to be referred to the secretary.

Services: Recreational

PORT ARTHUR AND FORT WILLIAM, ONTARIO.—FAMOUS PLAYERS CANADIAN CORPORATION, LIMITED, AND THE PORT ARTHUR AND FORT WILLIAM THEATRICAL FEDERATION, COMPOSED OF LOCAL 489 OF THE AMERICAN FEDERATION OF MUSICIANS, AND LOCAL 467 OF THE INTERNATIONAL ASSOCIATION OF THEATRICAL STAGE EMPLOYEES.

Agreement to be in effect from September 1, 1925, until August 31, 1926.

The union is to provide competent employees.

Rules and regulations may be made by the employers providing such do not conflict with terms of the agreement.

In case of discharge of any member, the cause may be investigated by the executive of the union, and if decision is reached that member has been discharged unjustly, he shall be reinstated and reimbursed.

Members employed by the week shall give two weeks' notice of leaving employment, except in case of non-payment of salary.

If the party of the first part, lessee, manager or owner, disposes of interest in the business previous to the termination of the agreement, services of the party of the second part are to be retained.

Special stipulations for the Orpheum Theatre are not to be used as a precedent for any of the other theatres.

Nothing in the agreement will prevent the parties conferring regarding special considerations which might increase efficiency and good will.

Musicians, Local 489

Wages, weekly engagements: Picture houses, miscellaneous picture, vaudeville, stock or kindred class of performance, leader, $55; side musicians, $42.50. Six matinees and six nights per week. In theatres playing all vaudeville for entire week, $5 extra for leader; $3 extra for side musicians.

Work evenings only, to augment regular orchestra, not more than three and one-half hours, terminating not later than 11 p.m., six nights per week, $30.

In theatres not employing regular orchestras: Picture houses, matinees, $4; stock, vaudeville, etc., $5; leader, $2 extra. Six consecutive engagements of matinees or evenings same as "evenings only". Rehearsals, $2 extra.

Solos, duos, trios, etc., and jazz acts, with all necessary rehearsals, side men, $2 each; leader, $3; extra musicians, $3; solos, $5. Members of orchestra playing behind the scenes, $1 extra per performance, chargeable to company or vaudeville act and not to the theatre.

No deduction from salaries of musicians on account of theatre being closed any part of a week.

Any member or members of a regular theatre orchestra displaced by travelling musicians shall receive full salary.

Overtime: half hour or less, $1. Extra rehearsals, one hour and a half or less, in connection with weekly engagements, $2. Over one and a half hours, overtime rates. Dress rehearsals, up to three hours, $5; thereafter, overtime rates.

Free rehearsals: pictures—one free rehearsal for each special score or special act; for vaudeville, road shows, special acts, etc., one free rehearsal for each change of show. Over 1½ hours, overtime rates.

Music rehearsals, once a week, 1½ hours.

Members substituting in case of sickness, pro rata; other occasions, $5.

Orpheum theatre: regular orchestra, five members, nights; three in afternoons. Side musicians, $30 per week; leader, $40. Matinees, $12.50 for side musicians; $15 for leader. Nights, 3½ hours; matinees, 1¾ hours.

The leader is to be in full charge; if side musicians are not satisfied they may appeal to the local. New members may have one week's trial and either side may terminate the agreement on 24 hours' notice.

Motion Picture Projectionists, Local 467

Minimum wage, per week of up to six days, projectionist, $42.50; second, $32.50.

Hours per day, maximum of 7, in not less than 2 shifts. Overtime, outside of regular hours, not less than $1.25 per hour. After 12, midnight, double time.

Annual leave, projectionists, two weeks each year. Competent substitutes to be supplied by the local.

One free rehearsal if required provided house is open between 1 p.m. and 11 p.m., and provided rehearsal is held after 9 a.m. and before regular opening hour.

Night rate, 4 hours, 6 days, $37.50 per week. Matinees extra, *pro rata*.

Terms for unspecified engagements will be set by the executive board of the local.

Engagements for less than two weeks, not less than $5 per performance of up to three hours.

Members discharged shall have two weeks' notice or two weeks' salary (except in case of drunkenness or dishonesty).

Employer may make rules as long as they do not conflict with terms of the agreement.

Weekly employees shall give two weeks' notice if leaving their employment, except in case of non-payment of salaries.

Screening is classed as overtime; inspecting film and repairing machines not classed as overtime.

Theatrical Stage Employees, Local 467

Overtime scale, week days, between 9 a.m. and 12 midnight, 90 cents per hour; from 12 midnight until 9 a.m., $1.35 per hour. Sunday work $1.35 per hour, not less than four hours. Broken time, covering a period of less than two weeks, *pro rata* of prevailing rate.

Overtime: all time except performance time.

In a theatre working combination crews, when there is building of scenery, etc., for stock companies, hours, 10 a.m. to 12 noon, and 1.30 p.m. to 5 p.m., at stock scale of wages.

No employee shall perform work of janitor's, furnaceman's or housecleaning department.

Hours for stock hands: Monday from 9 a.m.; other days, 10 a.m. Matinee and evening performances, thirty minutes before rise of the curtain until striking of last act. Other time, overtime rate.

Regular hands, 10 a.m. except when taking in a show when work shall start at 9 a.m.

Extra hands, eight hours per day.

Regular stage crews: salaries per week—carpenters, property man, electrician, flyman, $42.50; assistant property man, assistant carpenter; third hand, assistant flyman, $40. Nights, $37.50.

Extra men, union members, $3 per performance; non-members, $2 per performance. Overtime, 90 cents per hour; Sunday work, $1.35; Sunday concerts, lectures, etc., $8.

When men are employed 3 days or half the week, scale shall be $21.25. When less than half the week, hourly rate shall be paid.

When only one man—maintenance man—is employed, salary shall be $37.50 for pictures and $42.50 for road shows.

Employees under this agreement shall not work in a theatre where any labour trouble exists.

For extra performance, regular crew shall receive one day's pay, *pro rata* of weekly salary.

The employer is to retain union musicians and union operators during life of this agreement, otherwise, agreement will be null and void.

Matters relating to the mechanical department as well as doubtful or obscure clauses shall be settled by executive board of the union and the house manager. In case of failure to agree the parties shall name a disinterested person.

Rehearsals to be paid at regular overtime rate, not less than four hours accepted. For dramatic stock, one rehearsal by regular crew gratis each week.

Road attractions, eight performances per week; for extra matinees on legal holidays, regular crew to receive double time. Other matinees, regular rate.

Regular time, eight hours per day.

Weekly employees, two weeks' notice of dismissal or two weeks' pay (except in case of drunkenness or dishonesty).

The employer may make rules and regulations provided they do not interfere with union rules.

The union agrees to furnish competent men.

Weekly employees shall give two weeks' notice of leaving employment except in case of non-payment of salaries.

AMENDMENT TO THE AGREEMENT BETWEEN UNITED MINE WORKERS OF AMERICA, DISTRICT 18, AND CERTAIN COAL MINE OPERATORS IN ALBERTA

THE agreement as to wages and working conditions in coal mines between the United Mine Workers of America, District 18, and certain operators, members of the Red Deer Valley Operators Association, taking effect June 1, 1925, was given textually in the LABOUR GAZETTE for December, 1925, pages 1211-1214. Similar agreements were also entered into by the union and certain operators individually while some of the agreements between operators and committees of the employees or between operators and independent unions were somewhat similar in form and wage scale. Toward the end of November in the Red Deer Valley many of the miners (including some who had left the union and gone on strike in June, returning to work in September and not working under any agreement) demanded an increase in wages. Some of these went on strike but were mainly unsuccessful (LABOUR GAZETTE, January, 1926, p. 15). District 18 of the United Mine Workers of America and those operators, members of the Red Deer Valley Coal Operators Association, whose mines remained union, entered into an agreement to amend the agreement in force from June 1, 1925, the wage scale being increased by approximately 5 per cent. The rates for drivers were advanced from $4.90 per day to $5.25. This last change was noted in the wage schedule to the agreement printed in the December issue, it not having been reported at that time that the schedule was changed for other classes. The

new schedule, in effect from December 1, 1925, is as follows, the rates of the June agreement being given for comparative purposes:—

INSIDE DAY WAGES

Occupation	Agreement June, 1925	Agreement Dec., 1925
Rock miner	$ 5.85	$ 5.97
Machineman, electric	7.00	7.00
Machineman's helper, electric	5.45	5.67
Radial machineman	5.40	5.57
Radial machineman's helper	4.45	4.67
Mine carpenter	5.50	5.77
Driver boss	5.40	5.67
Pipe fitters	5.40	5.57
Stableman	5.40	5.57
Driver, spike team	5.40	5.57
Miner	5.40	5.57
Shotlighter	5.40	5.57
Bratticeman	5.40	5.57
Tracklayer	5.40	5.57
Timberman	5.40	5.57
Main and tail rope rider	5.40	5.57
Clutchman	5.40	5.57
Cagers, shaft	5.40	5.57
Hoistman	5.40	5.57
Timber handler	5.10	5.35
Motorman	4.90	5.15
Driver	4.90	5.25
Rope rider	4.90	5.15
Locomotive engineer	4.90	5.15
Bratticeman's helper	4.45	4.67
Timberman's helper	4.45	4.67
Tracklayer's helper	4.45	4.67
Motorman's helper	4.45	4.67
Locomotive switchman	4.45	4.67
Couplers	4.45	4.67
Pushers	4.45	4.67
Buckers	4.45	4.67
Loaders	4.45	4.67
Cagers, slope and incline	4.45	4.67
Pumpman	4.45	4.67
Grippers	4.45	4.67
Pipe fitter's helper	4.45	4.67
Rollerman	4.45	4.67
All other labour not classified	4.45	4.67
Boys' Rates—		
Outside	3.00	2.30–3.15
Inside	3.50	2.62–3.65

OUTSIDE DAY WAGES

Occupation	Agreement June, 1925	Agreement Dec., 1925
Powerhouse engineer	$ 4.90–5.70	$ 5.15–5.98
Hoisting engineer	5.55	5.82
Tail rope engineer	5.70	5.87
Blacksmiths	5.50	5.77
Carpenters	5.50	5.77
Machinists	4.90–5.50	5.15–5.77
Endless rope engineers	5.40	5.57
Incline engineer	4.90	5.15
Boxcar loader engineer	4.90	5.15
Tipple engineer	4.90	5.15
Locomotive engineer	4.90	5.15
Car repairer	4.90	5.15
Breaker engineer	4.90	5.15
Timber framer	4.90	5.15
Motor truck driver	4.90	5.15
Locomotive switchman	4.50	4.72
Electrician's helper	4·45	4·67
Blacksmith's helper	4·45	4·67
Carpenter's helper	4·45	4·67
Machinist's helper	4·45	4·67
Bottom man	4·45	4·67
Fireman	4·45	4·67
Tipple Dumper	4·45	4·67
Breaker picker boss	4·45	4·67
Teamsters	4·45	4·67
Box car shoveller	4·45	4·67
Lampman	4·45	4·67
Railway car handler	4·30	4·51
Screen engine tender	4·20	4·41
Fireman's helper	4·20	4·41
Tipple dumpers helper	4·20	4·41
Top cager	4·20	4·41
Timber sawyer	4·20	4·41
Water tender	4·20	4·41
Breaker oiler	4·20	4·41
Washer or tipple oiler	4·20	4·41
Stable men	4.20	4.41
Slate pickers	4.20	4.41
Car oilers	4.20	4.41
Ashmen	4.20	4.41
Wiper	4.20	4.41
Coupler	4.20	4.41
Rock bank man	4.20	4.41
Dirt bank man	4.20	4.41
Finisher after box car loader	4.20	4.41
Fanman	4.20	4.41
All other labor not clasisfied	4.20	4.20

FUEL SUPPLY AND SETTLEMENT OF THE ANTHRACITE COAL MINING STRIKE IN THE UNITED STATES

THE events in connection with the cessation of mining of anthracite coal in Pennsylvania on September 1, 1925, and conditions as to the supply of fuel for households ordinarily dependent upon anthracite coal have been dealt with in the Labour Gazette each month (January, 1926, p. 78 and preceding issues). The principal points in dispute were a demand for a wage increase and the check-off by the miners and insistence on arbitration by the operators.

During January negotiations were carried on from time to time but without result, a settlement being reached, however, in February. The joint scale committee of operators and miners had met in New York on December 29, the first time after the adjournment on August 4, and broke up on January 12. On January 26 the committee met again at Philadelphia to consider a plan proposed by the publisher of the *Scranton Times*, proposing a five-year agreement providing for the wages and working conditions in force preceding the cessation on September 1, unless changes were mutually agreed upon. The operators insisted upon some provision for arbitration and the conference broke up on February 2.

There were, however, intermittent conferences from that time on. Many appeals and resolutions were introduced in the Pennsylvania Legislature seeking to end the strike, but all were either killed in committee or failed of passage when reported. The U.S. Senate took a hand by adopting a resolution appealing to the President to bring about a resumption of mining. The President, however, made it known that his policy of non-intervention remained unchanged.

On February 12th it was announced that an agreement had been reached in Philadelphia at a conference of the anthracite operators and the representatives of Districts 1, 7 and 9 of the United Mine Workers of America covering wages and conditions of employment, subject to ratification by the rank and file. the following are the terms of the agreement:—

1. Work shall be resumed at once under the terms of the expired contract, which, subject to modification as hereinafter provided, shall be in force and effect until August 31, 1930.

2. At any time after January 1, 1927, but not oftener than once in any year, either party may, in writing, propose modifications in the wage scales of said contract. The parties agree within fifteen days after receipt of such written proposals to start conferences in the usual manner in an effort to agree upon such modifications.

3. If within thirty days after starting such negotiations the parties have not agreed, all issues in controversy shall be referred to a board of two men with full power and without reservation or restrictions, and the parties agree to abide by any decision or decisions of such board, either on the merits of the controversy or as to procedure to be followed. Such board shall be appointed as follows:

The operators shall name three men and the miners shall name three men. The operators shall select one man from the miners' list and the miners shall elect one man from the operators' list, and the two men so approved shall constitute said board. Unless agreed, the men named by the parties shall not be connected with the United Mine Workers of America or the business of mining coal. The board shall be obligated, within ninety days after appointment, to arrive at a decision on all issues in controversy, and to that end shall formulate their own rules and methods of procedure and may enlarge the board to an odd number, in which event a majority vote shall be binding.

4. The demands of the operators and the mine workers on the question of co-operation and efficiency are referred to the Board of Conciliation, exclusive of the umpire, which shall work out a reciprocal programme of co-operation and efficiency.

5. The Board of Conciliation shall proceed to equalize wages, etc., in accordance with clause 12 of the agreement, dated September 19, 1923.

6. Except as modified herein, the terms and provisions of the award of the Anthracite Coal Strike Commission and subsequent agreements made in modification thereof or supplemental thereto, as well as the rulings and decisions of the Board of Conciliation, are hereby ratified, confirmed and continued during the term of this contract, ending August 31, 1930.

The legislative proposals for regulation in the United States Congress, the State of Pennsylvania and the State of New Jersey had not been finally dealt with, being referred to committees, with little indication that any of them would be passed into legislation. On the result of the settlement being announced it was stated that Congress would probably proceed with the President's proposals to give effect to the recommendations for legislation made by the United States Coal Commission, 1922-1923.

During January, as in previous months, prices of substitutes for anthracite coal varied with the weather and the reports as to the possible settlement of the strike. A cold spell at the end of December caused increases in prices and the breaking down of the negotiations on January 12 caused a further increase. Coke which had risen to $6 per ton at the ovens at Connellsville, but eased off as the negotiations proceeded, rose to $7.50-$8.50. Coke prepared for household furnaces rose to $10.50-$11 and later to $11-$13. At the end of January crushed coke was up to $12-$13. There was a good market for low-volatile or "smokeless" bituminous coal but the high prices tended to curtail its use. The demand for screened bituminous coal also improved, especially when prices of coke and low volatile bituminous coal were high.

In Canada the supplies of coke and of anthracite coal from Wales and Scotland were reported to be good, but that stocks of anthracite coal from the United States were practically exhausted at the beginning of the year although some dealers in most of the cities had a small supply for emergencies for householders who might be in serious difficulties. Prices were not up substantially. Supplies of coke were not large and prices rose slightly with the advance in prices in the United States where most of it is produced. Gas companies in the various cities experienced a good market for coke but were not sold out continually as in the winter of 1922-1923, when blast furnace and foundry coke from the United States was not available in any large quantity at the time as a result of the bituminous miners' strike in 1922. The production of by-product coke in Canada as well as in the United States has also been greatly increased since that time. Retail dealers in Ontario reported that supplies of low volatile bituminous coal were fairly good and also supplies of semi-anthracite coal and at prices somewhat lower than anthracite usually commands. By-product coke the best substitute for anthracite coal, rose from about $13 in most Ontario cities in the autumn to $16 by the end of January, semi-anthracite was available in most of the cities at $14-$15 and smokeless bituminous at about $12-$15. In Quebec and the Maritime Provinces supplies of Welsh anthracite were good at about $18-$20 per ton for screened sizes and this coal was sold extensively in cities in Ontario as far west as Toronto. In the western provinces anthracite coal is so little used that the strike has not created any problem.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

DURING January the department received information regarding fourteen contracts executed by the Government of Canada, which included among their provisions the fair wages conditions sanctioned by Order in Council for the protection of the labour to be employed. In twelve of these contracts the general fair wages clause is inserted as follows:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may fom time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Each of the remaining two contracts contained a schedule of rates and hours based on the current standards of the districts in these respects. These schedules are given below.

The following general labour conditions sanctioned by the Fair Wages Order in Council appear in the fourteen contracts above referred to:—

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

2. The Contractor shall post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the Fair Wages Clause or Schedule inserted in his contract for the protection of the workmen employed, also any decision of the Minister of Labour under the preceding paragraph.

3. The Contractor shall keep proper books and records showing the names, trades, and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, and the books or documents containing such record shall be open for inspection by the Fair Wage Officers of the Government at any time it may be expedient to the Minister of Labour to have the same inspected.

4. The Contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of the contract in respect of work and labour performed in the execution of the contract unless and until he shall have filed with the Minister in support of his claim for payment a statement attested by statutory declaration, showing (1) the rates of wages and hours of labour of the various classes of workmen employed in the execution of the contract; (2) whether any wages in respect of the said work and labour remain in arrears; (3) that all the labour conditions of the contract have been duly complied with; or, in the event of notice from the Minister of Labour of claims for wages, until the same are adjusted. The Contractor shall also from time to time furnish the Minister such further detailed information and evidence as the Minister may deem necessary in order to satisfy him that the conditions herein contained to secure the payment of fair wages have been complied with, and that the workmen so employed as aforesaid upon the portion of the work in respect of which payment is demanded have been paid in full.

5. In the event of default being made in payment of any money owing in respect of wages of any workmen employed on the said work and if a claim therefor is filed in the office of the Minister and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of the moneys at any time payable by His Majesty under said contract and the amounts so paid shall be deemed payments to the Contractor.

6. These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payments for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

7. With a view to the avoidance of any abuses which might arise from the sub-letting of contracts it shall be understood that sub-letting other than such as may be customary in the trades concerned is prohibited unless the approval of the Minister is obtained; sub-contractors shall be bound in all cases to conform to the conditions of the main contract, and the main Contractor shall be held responsible for strict adherence to all contract conditions on the part of sub-contractor; the contract shall not, nor shall any portion thereof be transferred without the written permission of the Minister; no portion of the work to be performed shall be done at the homes of the workmen.

8. All workmen employed upon the work comprehended in and to be executed pursuant to the said contract shall be residents of Canada, unless the Minister is of opinion that Canadian labour is not available or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Department of Public Works

Contracts containing schedule of wages and hours

Construction of a Grain Inspector's Office at Vancouver, B.C. Names of contractors, Robertson Brothers, Limited, Vancouver, B.C. Date of contract, December 21, 1925. Amount of contract, $4,960.95. A fair wages schedule is inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours per day
	$ cts.	
Bricklayers and masons	9.00 per day	8
Carpenters and joiners	7.00 "	8
Concrete workers	0.55 per hour	8
Electrical workers	7.50 per day	8
Labourers	0.45 per hour	8-9
Lathers	0.07 to 0.09 per yard	8
Lathers	8.00 to 10.00 per day (according to efficiency	8
Painters and glaziers	6.50 per day	8
Plasterers	9.00 "	8
Plumbers	8.00 "	8
Plumbers (helpers)	5.00 "	8
Roofers	6.50 "	8
Sheet metal workers	8.00 "	8
Teamsters, one horse and cart	7.00 "	9
Teamsters, two horses and wagon	9.00 to 10.00 per day	9

Construction of a Postal Station, St. Denis Division, Montreal, P.Q. Name of contractors, Concrete Construction Limited, Montreal, P.Q. Date of contract, December 18, 1925. Amount of contract, $41,806.

Trade or class of labour	Rates of wages not less than	Hours per day
	$ cts.	
Bricklayers	1.00 per hour	9
Masons	1.00 "	9
Carpenters	0.65 "	9
Joiners	0.65 "	9
Electrical workers	0.65 "	9
Plasterers	1.00 "	8
Structural steel workers	0.70 "	9
Plumbers	0.65 to 0.75 per hour	8-9
Steamfitters	0.65 to 0.75 per hour	8-9
Marble setters	0.75 per hour	9
Terrazzo floor layers	0.75 "	9
Painters and glaziers	0.65 to 0.70 per hour	8-9
Lathers (wooden)	0.65 per hour	9
Lathers (wooden)	4.00 per thousand	
Sheet metal workers	0.65 per hour	9
Roofers	0.60 "	9
Concrete workers	0.35 "	10
Carters (single)	7.00 per day	10
Carters (double)	11.00 "	10
Building labourers	0.35 per hour	9
Ordinary labourers	0.30 "	10

Contracts containing the general Fair Wages Clause.—Wharf repairs and improvements at Ste. Petrouille, I.O. county of Quebec, P.Q. Names of contractors, Ludger Lemieux of Lauzon, Levis, P.Q., and Odilon Roberge of Ste. Marie de Beauce, P.Q. Date of contract, November 7, 1925. Amount of contract, unit prices, approximate expenditure, $4,171.

Construction of a rubble wall between the outer end of the West Pier and inner end of the West Breakwater in Port Burwell Harbour, Elgin County, Ontario. Names of contractors, William Bermingham and C. J. Bermingham, "William Bermingham and Son," Kingston, Ontario. Date of contract, December 15, 1925. Amount of contract, $5 per ton of stone (core and armour), in place. Approximate expenditure, $11,500.

Construction of one warehouse at Leamington, Ontario, (for Department of Agriculture). Name of contractor, J. A. E. Burrows, Leamington, Ontario. Date of contract, December, 17, 1925. Amount of contract, $12,500.

Alterations to the Armoury at Brampton, Ontario. Name of contractor, Percy Warr, Brampton, Ontario. Date of contract, December 22, 1925. Amount of contract, $890.

Construction of an extension to the existing public wharf at Victoria Beach, Lake Winnipeg, Springfield County, Manitoba. Names of contractors, Arthur Macaw and Robert J. Macdonald, "Macaw and Macdonald," Winnipeg, Manitoba. Date of contract, December 21, 1925. Amount of contract, unit prices. Approximate expenditure, $15,385.40.

Conversion of Red Cross Building into Officers' Mess Rooms, Fort Osborne Barracks, Winnipeg, Manitoba. Names of contractors, A. Macaw and R. J. Macdonald "Macaw and Macdonald" Winnipeg, Manitoba. Date of contract, January 5, 1926. Amount of contract, $3,700.

Construction of a wharf and for dredging in the approaches thereto at Midland, Ontario. Name of contractors, MacDonald Engineering Company of Canada, Limited, Toronto, Ontario. Date of contract, December 21, 1925. Amount of contract, unit prices. Approximate expenditure, $92,786.73.

Construction of 2 Leper Huts at the Bentinck Island Lazaretto, B.C. Name of contractor, James Smethurst, Victoria, B.C. Date of contract, December 26, 1925. Amount of contract, $4,950.

Construction of a pile bent and timber decking wharf at False Bay, Lasqueti Island, B.C. Name of contractor, William Greenlees, Vancouver, B.C. Date of contract, 11 January, 1926. Amount of contract, $5,458.

Department of Railways and Canals

Contracts containing general Fair Wages Clause.—Erection of bridges at Mile 53.5 Caraquet S/D, and Mile 72.4 Caraquet S/D, Canadian National Railways. Name of contractors, MacGregor and McIntyre Limited, Toronto, Ontario. Date of contract, October 22, 1925. Amount of contract, $5.75¼ per 100 lbs., sales tax included.

Erection of a steel highway swing bridge over Chambly Canal at Riley's Crossing. Name of contractors, Dominion Bridge Company, Limited, Montreal, P.Q. Date of contract, January 7, 1926. Amount of contract, $25,058.

Erection of a highway swing bridge over the Welland Canal at Queenston Street, St. Catharines, Ontario. Name of contractors, The Hamilton Bridge Works Company, Limited. Date of contract, January 7, 1926. Amount of contract, $66,967.

Post Office Department

The following is a statement of payments made in January, 1926, for supplies ordered by the Post Office Department, under contracts which are subject to the Fair Wages policy:—

Nature of orders	Amount of orders
	$
Making metal dating stamps and type, also other hand stamps and brass crown seals	1,081 61
Making and repairing rubber stamps, daters, etc.	220 68
Making up and supplying letter carriers' uniforms, etc.	21,459 28
Stamping pads, ink, etc.	206 43
Mail bag fittings	18,840 57
Scales	556 96
Repairs to letter boxes, etc.	260 39
New letter boxes	459 68

"FAIR WAGES" IN SASKATCHEWAN GOVERNMENT CONTRACTS

THE *Saskatchewan Gazette* of January 30, 1926, published the following Order in Council:

SASKATCHEWAN GOVERNMENT CONTRACTS

Regina, Monday, January 18, 1926.

His Honour the Lieutenant Governor by and with the advice of the Executive Council has been pleased to order that in order to more effectively further the purposes of the Fair Wage Resolution of the Legislative Assembly of Saskatchewan of January 7, 1913, that hereafter all government contracts to which the said resolution applies shall contain the following clauses:

1. Contractors shall post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen:
   (*a*) a copy of the Fair Wage Clause, inserted in his contract; and
   (*b*) the schedule of wages to be paid to his workmen, employed on the work.

2. Contractors shall keep a proper record showing the names, trades and addresses of all workmen in his employ, and the wages paid to and the time worked by such workmen, and the books and documents containing such record shall be open at all times to inspection by a Fair Wage Officer of the Government.

3. Contractors shall employ none but skilled workmen, and their apprentices, and as far as possible none but Canadian workmen shall be employed on the work.

4. The rates of wages shall be the standard rates of wages for the same trades in the district in which the work is carried out; if there is no standard rate in the district, then a fair and reasonable rate. In the event of any dispute arising as to the rate of wages to be paid it shall be determined by the Fair Wage Officer of the Provincial Government whose decision shall be final.

5. Subcontractors shall be bound in all cases to conform to the conditions of the main contract, and the main contractor shall be held responsible for strict adherence to all contract conditions on the part of the subcontractor.

6. These conditions shall extend and apply to moneys payable for the use and hire of horses or teams and the persons entitled to the payments for the use or hire of horses or teams shall have the like rights in respect to moneys so owing them as if such moneys were payable to them in respect of wages.

7. The contractor shall not be entitled to payment of any moneys which would otherwise be payable under the terms of the contract in respect of work and labour performed in the execution of the contract, unless and until he shall have filed with the Minister in support of his claim for payment, a statement attested by statutory declaration showing (1) the rates of wages and hours of labour of the various classes of workmen employed in the execution of the contract; (2) whether any wages in respect of the said work and labour remain in arrears.

His Honour further orders that for the enforcement of the Fair Wage Resolution, above referred to, Thomas M. Molloy be appointed Fair Wage Officer, the said appointment to take effect on, from and after the first day of January, 1926.

His Honour also orders that Order in Council No. 275, dated March 15, 1913, be rescinded.

J. W. McLEOD,
Clerk Executive Council.

The Manitoba Association of Graduate Nurses, at their twelfth annual meeting held at Winnipeg in January, decided to establish a Provincial Nurses' Sick Benefit Memorial Fund, in memory of the nurses who lost their lives while in service during the war. The Association promoted an extension course of lectures and clinics for nurses last year so that members might secure special training within the province.

PRICES, RETAIL AND WHOLESALE, IN CANADA, JANUARY, 1926

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was again towards somewhat higher levels, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being slightly higher.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities, was $11.63 at the beginning of January, as compared with $11.56 for December, 1925; $10.77 for January, 1925; $10.78 for January, 1924; $10.52 for January, 1923; $11.03 for January, 1922; $14.48 for January, 1921; $16.92 for June, 1920 (the peak); $12.42 for January, 1918; and $7.73 for January, 1914. The most important advances occurred in the prices of milk, bread, flour, beef, veal, mutton and pork, with smaller increases in evaporated apples, potatoes, bacon and lard. Slight declines occurred in the prices of eggs, dairy butter, cheese, beans and coffee. Including the cost of fuel and rent with that of foods, the total budget averaged $21.96 at the beginning of January, 1926, as compared with $21.87 for December 1925; $21.09 for January 1925; $21.23 for January 1924; $21.13 for January 1923; $21.52 for January 1922; $25.30 for January 1921; $26.92 for July 1920 (the peak); $19.80 for January 1918; and $14.49 for January 1914. Slightly higher prices for coal and hardwood caused an advance in the cost of fuel. Rent was practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the commercial importance of the commodities, advanced slightly to 163.8 for January, 1926, as compared with 163.5 for December 1925; 165.5 for January 1924; 151.4 for January 1923; 151.7 for January 1922; 200.6 for January 1921, and 256.7 for May 1920 (the peak). Forty prices quotations were higher, thirty-nine were lower and one hundred and fifty-seven were unchanged.

In the grouping according to chief component material, four of the eight main groups were higher, three were lower, while one was unchanged. The Vegetables and their Products group advanced substantially, slightly lower prices for grains, flour and other milled products, rubber and sugar, being more than counterbalanced by the much higher levels for potatoes. The Fibres, Textiles and Textile Products group, and the Iron and its Products group were slightly higher, the former because of increases in the prices of cotton and silk, and the latter because of an advance in the price of pig iron. The Wood, Wood Products and Paper group also advanced slightly. The Animals and Their Products group was lower, mainly because of declines in the prices of live stock, eggs, butter, cheese and lard. Declines in the prices of silver and zinc caused a slight decrease in the Non-Ferrous Metals group, in spite of advances in the prices of copper, lead and tin. The Chemicals and Allied Products group showed a very slight decline, while the Non-Metallic minerals group was unchanged.

In the grouping according to purpose, consumers' goods were slightly higher, due to higher prices for potatoes, meats, tea, coffee and spices, which more than offset the lower prices for butter, cheese, sugar and eggs; while producers' goods declined, due to lower prices for materials for the milling, the leather and the chemical using industries, as well as for the miscellaneous producers' materials. Materials for the fur industry, for the textile and clothing insustries, and for the meat packing industries advanced.

In the grouping according to origin, domestic farm products and articles of marine origin were slightly lower, while articles of forest origin and of mineral origin were practically unchanged. Raw or partly manufactured goods were higher, while fully or chiefly manufactured goods were somewhat lower. The advance in the former group was due mainly to higher prices for potatoes, tea, coffee, spices, live stock, meat, furs, smelted products, copper, lead and tin. These increases more than offset declines in sugar, eggs, jute, hessian, silver and zinc. The decline in the latter group was due to lower levels for flour, sugar, butter and cheese.

The index number of whoesale prices in Canada published by the United States Federal Reserve Board, including thirty-three raw materials, twenty-eight semi-manufactured or producers' goods, and thirty-eight finished or consumers' goods based upon prices levels in 1913 as 100, continued to advance, being 154 for December 1925; 152 for November; 145 for October, and 149 for December 1924. Grouped by stage of manufacture, raw materials and consumers' goods were higher, while producers' goods were unchanged. Grouped by origin domestic goods advanced, while imported goods declined substantially. Export goods were higher.

Prof. Michell's index number of forty articles, with prices during 1900-1909 as 100, declined substantially, being 181.3 for January 1926, as compared with 185.2 for December 1925; 182.3 for January, 1925; 265.1 for January 1920 and 117.3 for January 1914. The index number of twenty foods was down from 206.6 for December, 1925, to 201.1 for January, 1926. That for manufacturers' goods declined from 163.8 for December, 1925, to 161.5 for January, 1926.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. This index number has been calculated by years back to 1890, being unweighted, however, for the period 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925, January, 1926, and in greater detail in the Report on "Prices and Price Indexes 1913-1924," issued by the Bureau. A description of the methods used in the construction of the index number appears in the LABOUR GAZETTE for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of January of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE *resident* in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods; laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholsale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Cost of Electric Current for Householders*

With rates in 1913 at $100, index numbers of electric light rates were: 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1919, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5.

* LABOUR GAZETTE, December 1923, page 1442.

Retail Prices

Beef prices, which had declined steadily for the last five months, showed a general upward movement. In January sirloin steak averaged 28.2 cents per pound, as compared with 27.4 cents in December 1925; round steak 23 cents per pound, as compared with 22.1 cents in December; shoulder roast 15.3 cents per pound in January and 14.7 cents in December, and stewing beef 11.8 cents per pound in January and 11.3 cents in December. Veal and mutton also averaged slightly higher, the former being 18.5 cents per pound in January, as compared with 18.2 cents in December and the latter 28.9 cents per pound in January and 28.6 cents in December. Fresh pork advanced from an average of 28 cents per pound to 28.5 cents in January. Salt pork was also slightly higher at 26.9 cents per pound. Bacon and lard showed little change, increases in some localities being offset by declines in others. In fresh fish cod steak and halibut were slightly lower. Salt herrings and salt cod were somewhat higher. Lard rose ¼ cent per pound, averaging 24.9 cents.

Eggs showed a slight seasonal decline, fresh averaging 62.8 cents per dozen in January, as compared with 64.7 cents in December and 57.2 cents in November. Prices were somewhat higher in the Maritime provinces and Quebec but declined in most other localities. Milk prices averaged slightly higher, being 12.3 cents per quart in January, as compared with 12 cents in December. Higher prices were reported from Sorel, St. Hyacinthe, Belleville, Woodstock, St. Thomas, North Bay, Timmins, Port Arthur, Fort William, Prince Albert, New Westminster and Vancouver. Little change occurred in butter prices in the average, dairy averaging 46.0 cents per pound and creamery 50.7 cents. Cheese was slightly lower at an average of 33.4 cents per pound.

Lower prices for bread were reported from Amherst, Halifax and Brandon, while increases occured in Fredericton, Chatham, Port Arthur, Fort William and Victoria. Soda biscuits showed little change. Flour rose from an average of 5.2 cents per pound in December to 5.4 cents in January. Increases occurred in most localities. Tapioca was slightly lower, averaging 13 cents per pound. Little change occurred in canned goods. Potatoes averaged $2.64 per ninety pounds in January, as compared with $2.62 in December. Evaporated apples were up from an average of 19.8 cents per pound to 20.3 cents. Prunes showed little change, while raisins were slightly higher. The price of sugar was unchanged in the average.

Anthracite coal was up in the average from $18.02 per ton in December to $18.35 in January. Higher prices were reported from Quebec, Sherbrooke, St. John's, Thetford Mines, Montreal, Belleville, London and St. Thomas. Bituminous coal was also slightly higher, averaging $10.53 per ton. Hardwood rose from $12.16 per cord to $12.30. Higher prices were reported from Charlottetown and Kingston. Coal oil was slightly lower, averaging 30.1 cents per gallon, as compared with 30.3 cents in December. Little change occurred in rent.

Wholesale Prices

The following is a summary of a statement on prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices moved within narrow limits, the monthly averages showing little change as compared with December, 1925. No. 1 Manitoba, Northern cash wheat, Fort William and Port Arthur basis, averaged $1.56½ per bushel, as compared with $1.57 in December. The high price for the month was $1.60⅝ near the beginning, and the low $1.52⅞ about the 22nd. The decline in the prices was said to be due to the lack of European demand. Coarse grains also moved to lower levels, Western barley declining from 63c. per bushel to 61c.; oats from 48c. per bushel to 47¼c., and flax seed from $2.26 per bushel to $2.13. Flour was slightly lower, being $9.14¼ per barrel, as compared with $9.20 in December. Lemons at Toronto fell from $4-$5 per box to $4, and oranges from $5.50-$6 to $5.25-$5.50. Rubber was again somewhat lower, a grade of Ceylon declining from 99c. per pound to 83½c. Raw sugar was down from $3.71½ per hundred to $3.68, and granulated from $5.98½ to $5.89. Coffee advanced ½c. per pound to 28½c. Potatoes again advanced, the price at Montreal being up from $2.66 per ninety pounds to $3.06, and at Toronto from $2.50-$2.75 per ninety pounds to $3.40-$3.50. Linseed oil fell from $1.13 per gallon to $1.08. Choice steers at Toronto advanced from $7.17 per hundred to $7.25, while western cattle at Winnipeg remained steady. Hogs were again higher, the price advancing from $13.25 per hundred to $13.82. Sheep at Toronto were up from $6.75 per hundred to $6.87½. White fish and halibut at Toronto were slightly higher. Salt mackerel advanced from $7.50 per barrel to $8. Mink skins advanced $2 per skin to $15. Dressed hogs at Toronto rose from $16.50 per hundred to $17.30; mutton from $10 per hundred to $12; bacon from 32½-33½c. per pound to 33½-34½c. Finest creamery butter at Montreal was 1c. per pound lower at 46c. Cheese at Montreal fell from 28c. per pound to 27c. Eggs were substantially lower, fresh declining from 72-75c. per dozen to 50-52c., and storage from 43½c. per dozen to 38½c. Raw cotton at

New York averaged slightly higher, being 20.8c. per pound, as compared with 20.1c. in December. Raw jute was down from $15.90 per hundred to $15.66. Pig-iron at Montreal advanced from $28.75 per ton to $29.25, and square steel bars from $2.29 per hundred to $2.32. The following non-ferrous metals advanced, copper from $15.80 per hundred to $15.90; lead from $8.85 per hundred to $9.10; and tin from 64c. per pound to 64⅝c. Silver declined from 69½c. per ounce to 68¾c., and zinc from $10.30 per hundred to $10.15.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movement of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. Wholesale prices tended to continue the movements, noticed at the end of the year, falling in Great Britain and various Europeau countries. In Italy there was a sudden upward turn in December and prices in France continued to rise. There were declines shown by the index numbers of the United States and a tendency to rise by those of South Africa, India and New Zealand. In Great Britain the cost of living rose slightly at the beginning of the year, as it did, according to the lastest reports received, in France, Italy, Poland, India, New Zealand, and the United States.

Great Britain

Wholesale Prices.—The Board of Trade index number, on the base 1913=100, was 153.2 in December as against 153.7 in November. This was a total decline of 10.5 per cent below the average for January, 1925. During December, foods and meat and fish rose in price, 31 of the 53 items in the food group showing increases. "Other food" declined, and "total food" rose 1.1 per cent to 166.7. In materials, iron and steel and other metals and minerals showed very slight changes, cotton and other textiles declined, cotton falling 4.1 per cent. "Other articles" fell slightly and the total change of the non-food groups was a decline of 1.2 per cent.

The *Statist* index number (in continuation of Sauerbeck's figures) displayed a reaction of 1.9 per cent to 130.4 at the end of December, the lowest recorded since October, 1923, with the exception of October last. Foodstuffs declined for the month 0.3 per cent, vegetable food showing an advance while animal food and sugar, coffee and tea declined. Materials declined 2.8 per cent, the textile section dropping 7 per cent, following a rise of 7.4 per cent in November.

The *Economist* index number for December, on the base 1901-05=100, stood at 193.2, at the end of December, showing a decline of 1.6 per cent from the November level. During the year 1925, the trend of the index was downward, owing to declines in certain commodities hitherto standing at exceptionally high levels. During the month under review there were increases in wheat and flour, a sharp decline in butter, a decline in cotton, especially Egyptian, and reductions in wool and silk. At the end of January the index was 190.4. Cereals and meat had declined 4.7 per cent, and the miscellaneous group 3.7 per cent. Textiles and minerals both showed slight declines and other foods rose slightly.

Cost of Living—The index number of the Ministry of Labour, on the base July, 1914=100, fell two points to 173 on February 1. Foods stood at 168; rent, 148; clothing, 225; fuel and light, 185; sundries, 180.

Austria

Wholesale Prices.—The official index number of the Federal Statistical Office, on the base first half of 1914=1, was 18,063 in December, a rise for the month of 0.6 per cent. Foods rose 1.1 per cent to 16,467 and materials showed almost no change at 21,637.

Belgium

Wholesale Prices.—The index number compiled by the Ministry of Industry and Labour, on the base April, 1914=100, fell from 577 in September to 575 in October and 569 in November. In the two months period net declines were shown by the following groups: food products, fuels, metal products, petrol and products, clay products, fertilizer, fats, textile products, and construction materials. Net increases were shown by the following: tar and products, glass products, chemical products, resin products, hides and leather products, and raw rubber. No change was shown by paper products and tobacco.

Cost of Living.—The index number of cost of living for a working class family of the lowest category, on the base 1921=100, rose from 140.56 in November to 142.27 in December, or 1.2 per cent. Foods rose 1.8 per cent and the other groups showed little or no change. The cost of living of a middle class family with moderate income rose 0.8 per cent in December to 144.15. This was due to a rise in the food group of 1.3 per cent, other groups being practically unchanged.

Denmark

Wholesale Prices.—The official index number published in *Statistiska Efterretninger*, having as base prices in 1913=100, declined 1.7 per cent from the October level to 176 in November and December. In December vegetable foods, fodder, and fuel and lighting materials rose in price; animal foods, metal and metal products, textiles and textile products, and chemicals declined, and other groups remained unchanged.

France

WHOLESALE PRICES.—The index number of *Statistique Générale*, on the base July, 1914 =100, was 618 in November, an increase of 5.8 per cent. The increase in foods was 4.2 per cent, the index reaching 500. Industrial materials rose 7.2 per cent to 722, the chief change being a rise of 11.9 per cent in textiles, the index in this group reaching 875.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913 =100, was 121.5 in December, as against 121.1 in November. Farm products rose slightly and industrial materials declined slightly. Goods produced rose about one per cent and goods imported declined 1.7 per cent.

COST OF LIVING.—The official index number of gold prices, 1913-14=100, was 141.2 in December, as against 141.4 in November. Food and clothing both fell slightly. Heat and light, rent and sundries all rose slightly.

Poland

WHOLESALE PRICES.—The index number of the Central Statistical Office, on the base January, 1914=100, stood at 124.1 in August, 127.2 in September, 127.7 in October and 136.5 in November. In the last month there was an increase of 13.7 per cent in wheat and vegetable foods; one of 12.3 per cent in colonial products and sugar; one of 21.7 per cent in raw and finished textiles; and one of 4.9 per cent in metals and coal. There were slight increases in animal products, hides and leather and chemicals, and no change in construction materials.

COST OF LIVING.—The official index number of cost of living of a family of four at Warsaw, on the base 1914=100 was 151.4 in August, 152.0 in September, 155.1 in October, 158.1 in November, and 173.1 in December. Foods rose from 172.6 in August to 203.6 in December; clothing rose in the same period from 248.4 to 291.7; fuel and light rose from 153.0 to 173.2; lodging and rates from 60.2 to 66.1; and sundries from 178.4 to 184.5. In all groups there were marked increases in December over November except in the case of lodging and rates, which showed no change.

Sweden

WHOLESALE PRICES.—The official index number of the Department of Commerce, on the base respective months of 1913=100, was 156 in December, having risen one point in each of the two previous months. The principal change during December was a rise of 7 points or 5.1 per cent. Animal foods fell 3 per cent. Slighter declines were shown by metals and metal products, lumber, hides and leather, and chemicals. Feed and forage and pulp and paper rose slightly and other groups showed no change. Raw materials rose 1.4 per cent; semi-manufactured goods rose 3.4 per cent; and completely manufactured goods fell 1.2 per cent.

Japan

WHOLESALE PRICES.—The index number compiled by the United States Federal Reserve Board, 1913=100, was 195 in June and July, 197 in August and September, 194 in October and 187 in November. Goods imported fell more sharply than goods produced, the former falling 5.6 per cent during the six months, and the latter 3.1 per cent. Goods exported rose 5.6 per cent and fell again 4.3 per cent. Raw materials fell 7.2 per cent, producers' goods rose slightly and then fell 3.6 per cent and consumers' goods fell 2.6 per cent.

New Zealand

WHOLESALE PRICES.—The index number of the Census and Statistics Office, on the base 1909-13=100, was 1812 in November, one point lower than the October level. The only marked change was a decline of 2.7 per cent in the groups, wool, hides, tallow, butter and cheese.

RETAIL PRICES.—The official index number of the Census and Statistics Office, of retail prices of food in 25 towns, on the base prices in 4 chief centres in 1909-13=1000, was 1667 in November as against 1656 in October. Prices of groceries and meat rose somewhat while dairy produce declined.

United States

WHOLESALE PRICES.—Bradstreet's index number of commodity prices (showing the cost of a list of 106 commodities) was $13.7229 on February 1, as against $14.0146 on January 1, a decrease of 2.1 per cent. Seven groups of commodities, including breadstuffs, live stock, fruits, hides and leather, metals, oils and miscellaneous products, showed decreases, while five groups, including provisions, textiles, coal and coke, building materials and naval stores showed increases. The chemical and drugs group was unchanged. The fall in rubber caused the decline in the miscellaneous group.

COST OF LIVING.—The index number of the National Industrial Conference Board, on the base July, 1914=100, rose from 170 in October to 172 in November and fell to 171 in December. In December the index numbers by groups were as follows: foods, 166, shelter, 177; clothing, 177; fuel and light, 166; sundries, 176.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1925

ACCORDING to reports received by the Department from various sources the number of fatal industrial accidents in Canada during the last three months of 1925 was 296. Of this total 72 occurred in the Transportation and Public Utilities group, 51 in Mining and Quarrying, 44 in Manufacturing, 42 in the Construction Industries, 30 in Agriculture, 29 in Logging, 11 in Service, 6 in Trade, 2 in Fishing, and 8 in miscellaneous industries. The corresponding total for the fourth quarter of 1924 was 312; while the number of fatalities in each of the first three quarters of 1925 was 202, 240 and 262 respectively. These figures do not include the fatalities noted in the supplementary list, appended to the present report, of accidents which occurred earlier in the year. Fuller tabulations covering the year 1925 will be given in the next issue of the LABOUR GAZETTE.

The following table does not necessarily include all the fatal industrial accidents that may have occurred during the period covered.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1925

Trade or Industry	Locality	Date	Age	Cause of Fatality
AGRICULTURE—				
Farm employee	Carnegie, Man.	Oct. 1	.....	Caught in belt of threshing machine.
Farmer	Dauphin, Man.	" –	.....	Crushed by rock under which he was digging.
Farmer	Sussex, N.B.	" 2	51	Shot in back while working in field.
Farm labourer	Moose Jaw, Sask.	" 6	18	Gun exploded.
Chicken rancher	Steveston, B.C.	" 7	56	Fell from scow and drowned.
Farmer	Solina, Ont.	" 12	77	Fell from ladder while picking apples.
Farmer	Aultsville, Ont.	" 13	.....	Crushed by overturned tractor.
Farmer	Near Brandon, Man.	" 15	.....	Injured while threshing.
Farmer	St. Louis, P.E.I.	" 19	60	Thrown when horse ran away.
Farmer	Thornton, Ont.	" 24	82	Fall of tree while cutting.
Farmer	Forbesville Ferry, Alta.	" 30	.....	Struck by capstan arm.
Farmer	St. Louis, P.E.I.	Nov. 4	55	Horse bolted and threw the driver to the ground.
Farm labourer	near Huntingdon, P.Q.	" 5	59	Crushed while felling tree.
Farmer	Camrose, Alta.	" 11	46	Explosion while preparing charge for well excavation.
Labourer on threshing gang	near Chinook, Alta.	" 13	25	Caught in drive belt.
Farmer	Castor, Alta.	" 21	.....	Trampled by horses.
Farmer	Orwell, P.E.I.	" 21	50	Injured in burning stable.
Labourer	Niagara Falls, Ont.	" 26	.....	Premature blast in removing stumps.
Farmer	near Rainy River, Ont.	" 27	.....	Truck hit by train at crossing.
Farmer	Hanna, Alta.	" 27	29	Slipped while mounting wagon and run over.
Farmer	Island of Orleans, P.Q.	" 28	.....	Tree crashed while felling.
Farmer	Broad Valley, Man.	" 29	.....	Accidentally shot while at work.
Farmer	Weyburn, Sask.	Dec. 2	55	Fell on pointed fence stake.
Farmer	Guelph, Ontario.	" 3	22	Caught in belt of gasoline engine.
Farmer	St. Peter's Road, P.E.I.	" 6	.....	Thrown from wagon.
Farmer	near Foremost, Alta.	" 17	51	Coal slide while loading at pit mouth.
Farm labourer	Elgin, Man.	" 18	.....	Fell from top of load.
Farmer	East Bideford, P.E.I.	" 22	45	Broke through ice and was drowned.
Farm employee	Elora, Ont.	" 24	22	Caught in belt from wood saw engine.
Farmer	Inglewood District, Ont.	" 25	77	Killed by cow while milking.
FISHING AND TRAPPING—				
Fisherman	Tabusintac, N.B.	Dec. 2	.....	Fell while carrying smelt pole.
Cook on Trawler	Canso, N.S.	" 24	.....	Body found in water. Cause unknown.
LOGGING—				
Bolt chuter	Powell River, B.C.	Oct. 1	.....	Hit by bolt flying from chute.
Logger	Theodosia Arm, B.C.	" 3	24	Crushed by rolling log.
Logger	Canoe Pass, B.C.	" 6	60	Killed by falling tree.
Labourer	Egan, Ont.	" 8	69	Struck by tree.
Labourer	Stratton, Ont.	" 12	16	Struck by tree.
Logger	Ladysmith, B.C.	" 21	35	Crushed by rolling log.
Bucker	Extension, B.C.	" 22	38	Jumped from logging train.
Labourer	Brennen, Ont.	" 22	45	Struck on head by tree.
Logger	near Nanaimo, B.C.	" 22	35	Leaped from runaway train.
Teamster	Verdun, Que.	" 22	.....	Crushed by wheel of cart.
High rigger	Port McNeill, B.C.	" 26	38	Line hauling him up tree broke.
Employee	Vancouver, B.C.	" 27	35	Clothing caught in machinery.
Employee	Alico, B.C.	" 29	.....	Crushed by falling chimney stack.
Logger	Three Rivers, B.C.	Nov. 9	67	Crushed by tree while felling.
Woodsman	Northumberland Co., N.B.	" 9	45	Fell into river.
Labourer	Bigwood, Ont.	" 21	.....	Drowned.
Lumberman	Bowsman, Man.	" 25	31	Head crushed when felling tree.
Labourer	Thor Lake, Ont.	Dec. 1	20	Struck by log.
Labourer	near Beauceville, Que.	" 5	39	Crushed by falling tree.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1925—Con.

Trade or Industry	Locality	Date	Age	Cause of Fatality
LOGGING—*Con.*				
Woodsaw operator	near Guelph, Ont.	Dec. 7	22	Caught in belt from gasoline engine.
Bushman	Collins Inlet, Ont.	" 7	55	Struck by tree.
Logger	Thurlow Island, B.C.	" 10	.....	Fell off pile driver.
Labourer	Whitefish, Ont.	" 14	.....	Crushed.
Labourer	McDougall Mills, Ont.	" 15	25	Struck by tree.
Logger	Amqui, Que.	" 15	36	Lost in woods and frozen.
Logger	St. Raymond, Que.	" 18	40	Caught under capsized load of logs.
Grading foreman	Port Renfrew, B.C.	" 28	49	Premature explosion of stumping powder.
Log loader	Fanny Bay, B.C.	" 29	.....	Crushed by falling log.
Labourer	Blind River, Ont.	" 29	56	Drowned.
MINING, SMELTING AND QUARRYING—				
Metalliferous mining:				
Labourer	Coniston, Ont.	Oct. 6	27	Fell off tank.
Labourers (2)	Ingonish Beach, N.S.	" 11	.....	Crushed by gypsum ore while making repairs on ore pocket.
Employee in lead mine	Galetta, Ont.	" 15	39	Drilled into explosive.
Labourer	Kimberley, B.C.	" 21	55	Slipped and fell into ore bin.
Mucker	New Denver, B.C.	" 24	18	Fell down ladder in mine.
Hoistman	Gowganda, Ont.	" 25	31	Gassed.
Miner	Stewart, B.C.	" 26*	30	Crushed between ore cars.
Loader	Timmins, Ont.	" 29	28	Crushed by car.
Labourer	Timmins, Ont.	Nov. 5	41	Leg crushed.
Trimmer	Schumacher, Ont.	" 7	24	Fell off trestle over dump.
Miner	Schumacher, Ont.	" 9	32	Fall of rock in slope.
Miners (2)	North Cobalt, Ont.	" 24	19 26	Drilled into live explosive.
Miner	Copper Mountain, B.C.	" 25	34	Fell down incline.
Miner	Coniston, Ont.	Dec. 1	27	Back broken while at work.
Labourer	Schumacher, Ont.	" 9	38	Explosion.
Machine runner	Little Bras d'Or, N.S.	" 10	.....	Struck by fall of stone—crushed.
Miner	Timmins, Ont.	" 26	25	Fell down shaft.
Coal mining:				
Stableman	New Aberdeen, N.S.	Oct. 7	33	Found dead under fuel box.
Coal miner	Bienfait, Sask.	" 8	30	Projected material from blasting.
Miner	Diamond City, Alta.	" 18	38	While timbering, roof caved in.
Driver	Nacmine, Alta.	" 26	37	Fell off top of cars and crushed.
Miner	Drumheller, Alta.	" 21	42	Fall of rock.
Coal miner	South Wellington, B.C.	" 28	35	Fall of rock.
Loader	Burch Grove, N.S.	" 2	50	Struck by falling material.
Miners (2)	Stellarton, N.S.	" 6	33	
Miner	New Waterford, N.S.	" 7	41	Fall of coal from roof.
Miner	West Saunders, Alta.	" 11	38	Struck on head by falling timber.
Miners (3)	Kirkpatrick, Alta.	" 13	44 47 47 30	Crushed by falling material. Delayed shot, men entombed in debris.
Mechanic's helper	Onoway, Alta.	" 13	58	Fell off tipple.
Tally boy	New Waterford, N.S.	Nov. 14	.....	Foot caught between rope wheel and rope.
Carpenter	Acadia, No. 3, Thorburn, N.S.	" 16	49	Struck by piece of wood from saw.
Miner	Foothills, Alta.	" 20	.....	Fall of coal.
Miner	Near Redcliff, Alta.	Dec. 2	.....	Drowned on way to work when boat capsized.
Pipeman in coal mine	Glace Bay, N.S.	" 3	37	Struck by fall of stone.
Miner	No. 1 colliery, N. Sydney, N.S.	" 4	.....	Fall of coal.
Miner	Nordegg, Alta.	" 10	24	Buried under slide of coal.
Timber packer	Coleman, Alta.	" 19	28	Hit by car in mine.
Miner	Coleman, Alta.	" 21	57	Struck by fall of roof rock.
Miner	Acadia, No. 3, Thorburn, N.S.	" 21	50	Fall of roof.
Miner	Drumheller, Alta.	" 28	42	Fall of rock from roof.
Miner	Drumheller, Alta.	" 28	25	Fall of rock.
Non-metallic mineral mining and quarrying:				
Employee at quarry	Winnipeg, Man.	Oct. 9	23	Clothing caught while oiling machinery.
Quarry worker	Montreal, P.Q.	" 28	32	Fall of rock.
Foreman	Powell River, B.C.	Nov. 8	43	Fell into gears of gravel washing machine.
Gravel pit helper	Onoway, Alta.	" 13	58	Fell from conveyor shaft at pit.
Mine foreman	Thetford Mines, Que.	" 12	42	Fell between cars on railway.
MANUFACTURING—				
Food, drink and tobacco:				
Employee at sugar refinery	Montreal, P.Q.	Oct. 2	27	Fell off building.
Driver for packing company	Ottawa, Ont.	" 6	.....	Fell under wheels of cart.

*Died Nov. 1.

Grain buyer	Oakville, Man.	" 25	.....	Caught in machinery of grain elevator.
Logger	Langworth, B.C.	" 25	39	Caught by falling tree after felling same.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Limit of Compensation for Dismissal from Employment

A sales manager employed by a motor company at a salary of $250 a month was dismissed by the company after a week of employment. He brought action against the company, claiming damages in addition to the wages actually due. This claim was allowed by a magistrate, who awarded the plaintiff an additional four weeks' wages under the Masters and Servants Act, Revised Statutes of Alberta, 1922, chapter 180, section 5 (2) which reads:

"In the event of the justice determining that the servant or labourer has been improperly dismissed from the service of the master or employer he may in addition to directing the payment to him of any wages found to be due (not exceeding two months wages as aforesaid) direct such master or employer to pay such servant or labourer such further amount as to him may seem reasonable, but not exceeding in any event four weeks' wages."

The company appealed against the magistrate's decision and the District Court at Edmonton set it aside, dismissing the plaintiff's claim with the costs of the appeal. The court found that the employee had made no effort to obtain any employment for the remainder of the month after his dismissal; that for ten years prior to the trial he had never been out of employment, and had no trouble in obtaining equally remunerative employment at the end of the month. The plaintiff was therefore held to be out of court on the ground that he was bound so to conduct himself as to minimize the damages, and that he would have had no trouble in obtaining other employment on his dismissal if he had made any effort to get it.

Interpreting the section 5 (2), quoted above, the court held that the meaning of the words "such further amount as to him may seem reasonable, but not exceeding in any event four weeks' wages," especially when so strongly in contrast with the words in the preceding subsection "may direct the payment to him of any *wages* found to be due," was that such amount should be such as would reasonably compensate the servant for any damages he might suffer for the wrong done him.

—(*Alberta–McLean versus Alberta Canadian Motors Limited*).

Examination of an Employee for Discovery

The Supreme Court of Alberta, in a recent action for malicious prosecution resulting from a charge of theft, gave an interpretation of rule of court number 234 which regulates the calling of an employee as a witness in an examination for discovery. The plaintiff had been employed as a bartender by the defendant, and sought to examine a fellow bartender employed by the defendant at the same hotel. The rule in question provides as follows:—"A judge may order any party to an action, or any person who is or has been employed by any party to an action and who appears to have some knowledge touching the questions in issue acquired by virtue of such employment, whether such party or person be within or without the jurisdiction, to be orally examined before the trial touching the matter in question by any person adverse in interest."

The court ruled that the foregoing rule is not applicable unless the employee whom it is proposed to call has been directly connected with the transaction in question.

—(*Alberta–Weiss versus Schiescel*).

Employer is Bound to Provide Safe Conditions of Work

The coroner's jury which investigated the circumstances surrounding the death of a workman who was fatally injured in the course of his employment in a gravel pit at Eardley, Quebec, on January 27, brought in a verdict of negligence on the part of those in charge of the pit. The workman was buried under a fall of gravel caused by the collapse of an overhanging ledge beneath which he was shovelling gravel into a cart. The jury found that the ledge, which had been loosened by a charge of dynamite the evening before, should have been pulled down, although the sub-foreman in charge of the operations testified that all workers had been warned to keep away from the ledge. He stated that the dynamite had done nothing but loosen the overhanging material; and as he had no more dynamite he was obliged to leave it in that condition. On the following morning he set the men to work cleaning up loose gravel in the bottom of the pit, instructing them to keep clear of the overhang. He stated that he had warned the deceased workman twice.

Railwaymen's Hours of Service in United States

The United States Supreme Court, in a recent judgment, set aside the decision of lower courts which had imposed a fine of $600 on the Atchison, Topeka and Santa Fé railroad. The railroad had been found guilty of working two yardmasters twelve hours each in its Chicago yards.

The duties of these workers include telephoning to a tower man when trains cross the company's tracks. The lower courts held that the railway violated the federal Hours of Service Act, which provides that any employee engaged in the movement of trains shall not be employed more than nine hours in any 24-hour period. The Supreme Court ruled that the yardmasters' duties did not fall within the meaning of the act in regard to "exacting" labour, the act being intended to promote safety in operating trains by preventing excessive mental and physical strain which usually results from remaining too long at an exacting task.

Decision Affecting Hours of Labour of Seamen

The United States Supreme Court, in a recent decision, enforced section 2 of the Seamen's Act, which provides that a ship's sailors (the men on deck) must be divided into at least two watches, and firemen, oilers and water tenders into at least three watches, these to be on duty successively. The decision reverses two lower federal courts which ruled that a seaman was guilty of desertion if he left a vessel that did not observe the law. Prior to the passage of the law shipowners operated their vessels at night with one or two seamen and an officer on deck. Shipowners would risk dangers at night, because they are protected by insurance and limited liability, thus enabling the crew to be worked in the day time. Recognizing that this system menaced life and property, Congress provided that a portion of the crew must be on deck at all times, ready to obey orders. To enforce the law, Congress further provided that a violation would nullify the shipping contract between the vessel and workers.

Fair Wages Law Invalid in Oklahoma

The United States Supreme Court has set aside an Oklahoma law providing that contractors on State work shall pay the rate of wages that prevails in the locality where the work is performed.

The Supreme Court held that the current wage provision presented a double uncertainty "fatal to its validity as a criminal statute." The court said that the law, in attempting to prescribe wages, did not take into consideration the amount of work done, the efficiency of workmen and other considerations, and that interpretation of the words "current rate of wages" depended, in the main, upon the probable "varying expressions" of juries in different localities.

THE LABOUR GAZETTE

PREPARED AND EDITED IN
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 26] MARCH, 1926 [NUMBER 3

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

EMPLOYMENT on February 1 as reported by employers in industry (except in agriculture, fishing and hunting) showed partial recovery from the losses in employment recorded at the beginning of January. The revival, like the decline from which it was a reaction, was less extensive than on the corresponding date of 1925, but the resulting situation was decidedly more favourable this year. The Dominion Bureau of Statistics tabulated returns from 5,817 firms, whose payrolls included 744,860 persons, as compared with 738,115 in the preceding month. The index (the base 100 representing the number of employees of the same firms in January, 1920) stood at 90.7, while on January 1 it was 89.6. On February 1 in the years 1925, 1924, 1923, 1922 and 1921, it was 86.1, 90.6, 89.5, 78.9 and 90.1, respectively.

The Employment Service of Canada reported practically no change in the average daily number of placements in January as compared with the previous month, but a considerable reduction was noted in the comparison with January, 1925, owing to the smaller demand for casual workers, such as snow shovellers, in the present year. At the beginning of February the percentage of unemployment among members of trade unions was 8.1 as compared with percentages of 7.9 at the beginning of January, and 10.2 at the beginning of February, 1925. These percentages are based on returns received by the Department of Labour from 1,547 local trade unions, with an aggregate membership of 146,999.

The average cost of a weekly family budget of twenty-nine staple foods was $11.50 at the beginning of February, as compared with $11.63 for January; $10.93 for February, 1925; $10.75 for February, 1924; $10.53 for February, 1923; $10.61 for February, 1922; $14.08 for February, 1921; $16.92 for June, 1920 (the peak); $12.54 for February, 1918, and $7.75 for February, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, declined to 162.2 for February, as compared with 163.8 for January; 164.8 for February, 1925; 156.8 for February, 1924; 153.6 for February, 1923; 153.5 for February, 1922; 191.1 for February, 1921; 256.7 for May, 1920 (the peak); 200.5 for February, 1919; and 192.0 for February, 1918.

The time loss caused by industrial disputes in February was greater than in January, but less than in February last year. Eleven disputes were in progress at some time during the month, involving 2,433 employees, and resulting in a time loss of 22,966 working days. Corresponding figures for January were as follows: Six disputes, 357 employees, and 9,102 working days; and for February, 1925, fourteen disputes, 3,066 employees, and 27,013 working days.

Combines Investigation Act, 1923

Before this issue of the LABOUR GAZETTE went to press, word was received from Vancouver that a verdict of "guilty" was returned on March 13 by the jury in the case of four of the eleven individuals and four of the forty-two companies charged with conspiracy in connection with the marketing of fruits and vegetables in British Columbia and the prairie provinces. Mr. Justice D. A. McDonald thereupon imposed fines to the amount of $200,000 on the convicted parties. J. A. Simington, of Nash-Simington, Limited, Minneapolis; S. P. Lloyd, supervisor of credits for the Nash organization, Winnipeg; William Colquhoun and W. E. Carruthers, supervisors for Saskatchewan and for Alberta and British Columbia respectively; and the four companies, Mutual, Vancouver, Limited; Mutual Brokers, Limited, Calgary; Mutual Brokers, Limited, Regina; and Mutual Brokers, Limited, Winnipeg, were each fined $25,000.

Particulars of the case will be given in the next issue of the LABOUR GAZETTE.

Old Age Pension Bill to be introduced

Reference was made in the February issue of the LABOUR GAZETTE (p. 82) to the announcement which was made by the Government leader in the House of Commons on January 28, that it was the intention of the Govern-

ment to submit a bill to the House for the establishment of a system of old age pensions for Canada. It was added that these pensions would be based on the recommendations of a special committee of the House of Commons of 1924 (LABOUR GAZETTE July, 1924, p. 580).

Notice was given by the Acting Minister of Labour (the Honourable Dr. J. H. King) on March 15 of a proposed resolution dealing with this subject in the terms following:—

Resolved, That it is expedient to bring in a measure respecting Old Age Pensions, and to provide,—

1. That the Governor in Council may make an agreement with the Lieutenant-Governor in Council of any province for the payment to such province quarterly of an amount equal to one-half of the net sum paid out during the preceding quarter by such province for pensions pursuant to a provincial statute authorizing and providing for the payment of such pensions to the persons and under the conditions hereinafter specified and regulations made under the proposed legislation.

2. That every agreement so made shall continue in force so long as the provincial statute remains in operation or until after the expiration of ten years from the date upon which notice of an intention to determine the agreement is given by the Governor General to the Lieutenant-Governor of the province with which the same was made.

3. That before any agreement so made comes into operation, the Governor in Council shall approve the scheme for the administration of pensions proposed to be adopted by the province, and no change in such scheme shall be made by the province without the consent of the Governor in Council.

4. That all sums payable to any province in pursuance of any such agreement shall be payable from time to time on the certificate of the Treasury Board out of any monies belonging to the Consolidated Revenue Fund of Canada not otherwise appropriated, and the Governor in Council may borrow from time to time such sums as may be required for the purpose of making such payment.

5. That provision shall be made for the payment of a pension to every person who, at the date of the proposed commencement of the pension:—

(*a*) is a British subject, or, being a widow, was such before her marriage;
(*b*) has attained the age of seventy years ;
(*c*) has resided in Canada for the twenty years immediately preceding the date aforesaid;
(*d*) has resided in the province in which the application for pension is made for the five years immediately preceding the said date;
(*e*) is not an Indian as defined by the Indian Act;
(*f*) has not made any voluntary assignment or transfer of property for the purpose of qualifying for a pension.

6. That the receipt of a pension shall not by itself constitute a disqualification from voting at any provincial or municipal election.

7. That the maximum pension payable shall be two hundred and forty dollars yearly, which shall be subject to reduction by the amount of the income of the pensioner in excess of one hundred and twenty-five dollars a year.

8. That provisions be made as to the credit to the pension authority of the annual value of a pensioner's residence, and the recovery of pension payments out of deceased pensioner's estate, and for the distribution of pension burden among provinces by proportionate reimbursement or proportionate reduction where the pensioner resided in more than one province or transfers his permanent residence to another province, and for ceasing of payments where he transfers his residence to some place out of Canada, and the revival of his rights upon again becoming a resident of Canada.

9. That no pension shall be subject to alienation or transfer by the pensioner, or to seizure in satisfaction of any claim against him.

10. That on or before the thirtieth day of April in each year, the Minister of Finance shall make a full report to Parliament of the operation of the agreements made pursuant to the proposed Act, and of the monies of Canada paid to the provinces under each of the several agreements entered into pursuant thereto.

11. That the Governor in Council shall have power from time to time, on the recommendation of the Minister of Labour ,and with the approval of the Treasury Board, to make regulations, not inconsistent with the provisions of the proposed Act, with regard to the pensions herein provided for, and such regulations shall be published in the *Canada Gazette*, and be laid before Parliament.

Old age pension systems in various countries

A supplement is issued with the present number of the LABOUR GAZETTE containing information on old age pension laws in countries outside Canada. Many of these laws are of recent date, but some were enacted many years ago, the older laws being mostly of the voluntary type creating facilities for individual insurance, supplemented in several countries by Government subsidies. Pensions on a compulsory basis fall into two classes, those under which the individual beneficiary makes a contribution, and those which are supported entirely by the State. Non-contributary systems are in force in several States in America, and in Australia and New Zealand, as well as in several European countries.

Order in Council on workers' leisure

The text of an Order in Council defining Canada's position in regard to proposals for the utilization of workers' spare time is given on another page of this issue. The Order deals with the question of Dominion and provincial jurisdiction in reference to the Recommendation on this subject which was adopted by the International Labour Organization at its session in 1924.

In a recent article on the effects of the greater leisure now enjoyed by workers as compared with the past, Professor Paul H. Douglas, of Chicago, states that the standard working week has been shortened in the United States by nearly 20 per cent during the period of the past generation.

In 1890 the workday in industrially advanced countries was close to ten hours. Today it is close to eight hours. This reduction has implications beyond the economic field and is a social factor of the first order. Many millions of labouring men and women have won, since the year 1890, two additional hours of daily

respite from toil, two hours a day available for rest, recreation and education. The gain is actually greater than is indicated by these numbers for after an eight-hour workday the body and mind should be fresher for the advantages of leisure than after a ten-hour day.

Commenting on Professor Douglas' paper, the New York *Times* finds that there is plenty of evidence that the new leisure is not entirely frittered away. "For the younger workers it is safe to correlate the new leisure with the extraordinary increase in the extension work and night sessions of the colleges and universities. The museums, the libraries, the free public school lectures have profited."

"Save the Forest week," April 18 to 24

By a proclamation published in the *Canada Gazette* on February 13, the week commencing on April 18 and ending on April 24, has been appointed as "Save the Forest Week." Loggers, sawmill operators and others interested in timber operations should see that all equipment and appliances designed to prevent the origin or spread of fires are overhauled and placed in a state of thorough repair; such persons should review with care the fire protection requirements of the legislation under which they operate; and they should see that all employees working under their direction are properly instructed as to the danger of fire.

The proclamation states that "the tremendous economic loss through forest fires continues year by year without appreciable diminution; and Canada's future prosperity is seriously menaced by these recurrent holocausts."

"The experience of all forest authorities in Canada" the proclamation proceeds," has abundantly demonstrated that the forest fire problem can be solved only with the full sympathy, assistance and active support of all the people, practically expressed by increased individual care with fire in the woods, and an insistant public demand for proper precaution against fire on the part of all workers or travellers in or adjacent to the forest."

B.C. Male Minimum Wage Act

The "Board of Adjustment" which is in charge of the administration of the Male Minimum Wage Act of British Columbia, has been engaged during the past three months in conducting investigations with a view to the establishment of a standard wage rate for men in the Province. The text of this act was given in the January issue of this GAZETTE in an article outlining the labour legislation enacted at the recent session of the provincial legislature. The Board of Adjustment is the same Board as was appointed under the Hours of Work Act of 1923, establishing a legal 8-hour working day. It consists of three members, the Deputy Minister of Labour being chairman, and the other two members representing the employers and employees respectively. The act applies to adult male employees in practically all industries in the Province with the exception of certain seasonal occupations and domestic employment. It is stated that about seventeen per cent of these employees receive less than 40 cents an hour, those with the lowest rates of pay including many Chinese workmen. The lumber industry and retail business and offices are mentioned as the occupations most likely to be affected by the new law. The suggestion was made to the Board that the standard minimum wage rate should be 40 cents an hour, but labour organizations contend that 50 cents would be the lowest amount that would fulfil the purpose of the act, which is to secure that employees shall receive at least a living wage. To allay the apprehensions of labour that a minimum rate would tend to become a maximum rate for the classes to which it applies, it may be mentioned that Minimum Wage Boards in several provinces have frequently denied that such a result has followed from women's minimum wages. In every class of female labour the average wage is higher than the scale fixed by the various orders.

Physical examination of workers

Since January, 1924, the men and the management of the Spanish River Pulp & Paper Mills, Ltd., have been studying and discussing the value to the individual and to the company of periodic physical examinations. By invitation, representatives of the management attended meetings of the thirteen local unions to which Spanish River employees belong, for the purpose of presenting the benefits of such examinations. Information on the subject was also distributed by the Department of Industrial Relations maintained by the Spanish River Company. As a result of this study and by an unimous vote of the Mutual Interest Board, composed of representatives of the Company management and employees, a system of periodic physical examinations was inaugurated early in March at the company's mills in Espanola, and as soon as the system is working well there a similar arrangement will be made for examinations at the mills in Sault St. Marie and Sturgeon Falls. All expenses are being borne by the company. The examinations will therefore be free of charge

to all at present employed. None of the present employees is compelled to take the examination, but all who so desire may do so. Every person entering the service hereafter will have first to pass a physical examination to ensure that his employment will not be a danger to himself, a menace to his mates, or a danger to Company property. Approximately 10,000 working days are lost annually by the employees of this company through sickness. This is more than three times the amount lost through accidents. It is the hope of the Spanish River management that by the adoption of these examinations the lost time will be materially reduced, to the benefit of the men, their families and the Company.

Principles of factory inspection

The chief inspector of Factories of Nova Scotia, in his annual report reviewed on another page, states the purpose of safety inspection as now conducted in Nova Scotia and other Canadian provinces. This purpose is "by education, persuasion and helpfulness to elevate the standard of working conditions, to make people realize their responsibilities, to give service, and to enlist the co-operation of all interested in the safety and welfare of our industrial workers."

Factory inspection has now passed the "prosecution" stage, and the efficiency of a factories department is no longer measured by the number of persons brought into court in the course of a year. The small number of prosecutions at the present time for violation of the factory laws throughout Canada is evidence that officials and employers have now reached the stage of mutual understanding. For example, the last annual report of the Chief Factory Inspector of Ontario, who has a staff of twenty sub-inspectors, shows that informations were laid against only four employers in the course of the year. Some examples of the working of the policy of co-operation and friendly advice are given in the report of the Chief Inspector for Nova Scotia. During the past year he assisted in promoting local safety organizations "beyond the scope of any legislative enactment on the subject," and the establishment of several plant committees and safety groups was the direct result of the inspector's activity in this direction. The report concludes with the following paragraph which sums up the results of recent factory legislation:—

"There is evidence in the factories that factory inspection is serving a useful purpose in this province. If the older employees in the factories will look back to about eighteen years ago, when the factory laws were put into operation, and compare conditions then with those of the present time, they cannot fail to note many improvements beyond their fondest hopes at that time. The old order of dangerous conditions and unsanitary workrooms has gradually disappeared, and there has been established, slowly perhaps, but permanently, the general principle of safeguarding and a higher standard of factory hygiene, which will continue to develop and expand because what has been accomplished will increase the desire for something better."

Protection of electrical linemen

Among the legislative amendments recently proposed by The Ontario Executive of the Trades and Labour Congress of Canada (LABOUR GAZETTE, February, 1926, page 122), was a suggestion that regulations should be made by the Ontario Government for the protection of electrical linemen similar to those in force in Alberta. The Alberta regulations referred to were made by the Workmen's Compensation Board under the authority of the Electrical Protection Act (Statutes of Alberta, 1919, chapter 27). The act provides that "the Board shall with regard to the generation, transmission, transformation, distribution and use of electrical energy in any place or class of places, from time to time, make and enforce such regulations as appear to it to be reasonable and practicable, or necessary to provide safety and protection for the workers engaged therein."

The regulations now in force in Alberta became effective on October 15, 1920, after joint conferences had been held between representatives of employers and workmen of public and privately owned electric light and power plants. It was found that considerable alterations in electrical plants were necessary to secure conformity with the new requirements. During the first year the work of the inspector was largely of an educational character, but much reconstruction work was carried out, and a desire for co-operation with the Board on the part of the majority of the plant owners, both municipal and private as the work proceeded.

The regulations contain full specifications as to the proper installation of overhead lines, jointly-used pole lines carrying supply circuits, underground lines, supply stations, miscellaneous installations, methods of grounding and safety devices, and conclude with a series of general safety rules for workmen.

Problems of adolescent education

Dr. J. H. Putman, senior inspector of Ottawa Public Schools, in his annual report for 1925, calls attention to difficulties that are experienced in enforcing the provisions of the Ontario Adolescent School Attendance Act. The Canadian Council of Child Welfare, as stated in a note in the January issue (page 4), have protested against recent attempts in Toronto and elsewhere to render this act inoperative, declaring that its defeat would have a serious effect on the welfare movement throughout Canada. Dr. Putman disclaims any intention of discrediting the act and suggests that the difficulties that have arisen in its administration are due to weaknesses in the existing system of secondary education "that would have been revealed in no other way." He commends the intention of the act, which is to assert the right of the State to some reasonable supervision over adolescents. However, the present provision for secondary education is, he states, inadequate for the instruction of the large number of new adolescent students, and the courses are too narrow for young people of the more advanced age. Moreover, the act "never can work smoothly until some provision is made to allow complete exemption from the provisions in those cases where the economic needs of the family have a natural precedence over the further school training of the adolescent, and also in those cases where, because of low mental power, the best possible education for the adolescent is the discipline and training of some form of industry under adequate supervision.

Dr. Putman believes that the necessary state supervision of adolescents may be carried out as effectively in connection with industrial pursuits as in school classes, whether part-time or whole-time. "The discipline and positive instruction of the class-room is only one of many methods or forms of education, and no man can prove that in every case the class-room is superior to the workshop or the potato-patch, the kitchen or the laundry. Class-rooms for the education of every kind of human being are extremely modern inventions. In another century they may be largely superseded by something better."

Quebec Commission on Sunday Work

A commission to study the problem of Sunday labour in the Province of Quebec was appointed under an order in Council signed by the Lieutenant Governor on March 3. The commissioners are as follows:—Judge Aimé Marchand, chief magistrate of the Province; Reverend A. Vachon, Quebec, Reverend A. G. Wilen, Kenogami, and François Faure, Shawinigan Falls. (The last issue of the LABOUR GAZETTE contained a note on the situation arising out of the non-observance of the Sunday rest in the pulp and paper industry in Quebec, stating that the Government had announced that the law was to be strictly enforced).

The Order in Council sets forth that the Lord's Day Act (Revised Statutes of Canada, 1906, chapter 153) forbids Sunday work except under certain special circumstances, but that notwithstanding this law a number of manufacturers in the province, principally those in the pulp and paper industry, have made their employees work on Sunday, despite repeated notices given to them, claiming that certain work done on Sundays is urgent and necessary, and therefore comes under the exemptions mentioned in the Lord's Day Act.

The commission will commence its investigations at once, and will report the results to the Lieutenant Governor in Council. It may be noted that the Lord's Day Act of the Dominion provides in section 17 that "no action or prosecution for a violation of this Act shall be commenced without the leave of the Attorney General for the province in which the offence is alleged to have been committed, nor after the expiration of sixty days from the time of the commission of the alleged offence."

Rest pauses in routine work

The Industrial Fatigue Research Board of Great Britain have issued a report on recent investigations conducted by them into repetitive work with special reference to rest pauses.

The investigations related to handkerchief folding and hand ironing, carried on in the same room but by different sets of workers; and to the stamping out of cigarette tin lids from strips of tin sheet. In each case the output was recorded, at short intervals, both before and after a definite rest pause of 10 minutes had been introduced in the middle of a long spell of continuous work. The general result of the investigation was to show an increase in the net rate of working, varying from 1.5 to 8.0 per cent. The increase was shown in the period preceding as well as in that following the rest. In the hankerchief folding and ironing there was an increase not only in the rate of working but in the total output, amounting to 2.3 per cent in the case of handkerchief folding and to 1.6 per cent in handkerchief ironing. In the stamping process there was an increase of 0.7 per cent in the morning spell, but a decrease of 2.4 per cent in the afternoon spell.

In a prefatory note, the Board reviews generally the evidence now available on the subject of rest pauses. This evidence, they observe "strongly suggests that the experimental introduction of rest pauses, at least for processes involving light repetitive work, will have a successful issue. . . . There is no reasonable doubt that, in a working spell of 4 to 4½ hours, the beneficial effects of a short rest pause emerge through the many other factors present in industrial work, and cause a genuine increase in output as well as greater comfort and satisfaction for the workers." They add that employers who have adopted the practice, which is far commoner in the United States than in this country, have seldom discontinued it after trial; and they conclude from this that it has proved almost universally successful.

Naturalization of aliens in Canada

The Annual Report of the Secretary of State of Canada for the year ended March 31, 1925, contains a chapter dealing with the administration of the Naturalization Acts, 1914 and 1920. The total number of persons naturalized under these Acts during the year ended March 31, 1925, was 13,288. This includes the wives of the persons to whom certificates were issued, also the minor children whose names are shown on the certificates. Five certificates were revoked and cancelled by the Governor in Council during the year. The following are the countries of origin, and the number of persons from each, to whom naturalization certificates were granted: Albania, 12; Austria, 1,647; Belgium, 289; Bulgaria, 104; China, 128; Cuba, 1; Czecho-Slovakia, 188; Danzig (citizens of), 2; Denmark, 158; Finland, 250; Esthonia, 2; France, 140; Germany, 592; Greece, 426; Holland, 143; Hungary, 194; Iceland, 10; Italy, 2,037; Japan, 15; Luxemburg, 1; Montenegro, 1; Norway, 286; Persia, 4; Poland, 1,498; Roumania, 936; Russia, 1,559; Serb-Croat-Slovens State, 172; Spain, 5; Sweden, 448; Switzerland, 70; Turkey, 15; Turkey (Armenia) 54; Turkey (Greece), 4; Turkey (Syria), 117; United States (citizens of), 1,745; Unknown, 5; Doubtful, 2; Total, 13,288.

Ontario training farm for boy immigrants

The Honourable G. H. Ferguson, premier of Ontario, announced in the Legislature in February that the Provincial Government had bought "Vimy Ridge Farm" for the training of boys to be brought from Great Britain to the Province. Vimy Ridge Farm is situated three miles from Guelph in a fine agricultural district. After the war it was chosen as a vocational training farm for wounded soldiers, and later it was used as a retreat for girls from the Toronto Industrial School. *The Guelph Mercury* commented on the purchase of the farm as follows: "It is a plan which should work out well in the interest of the Province. There has been a great scarcity of farm help for some years. These lads, who will be selected for migration on account of their suitability for the work and the promise of becoming good, useful citizens, will on their arrival undergo a course of training at Vimy Ridge in Canadian agricultural methods. They will then be capable of giving such help in farm work as should create a demand for their services by farmers all over Ontario. With further experience gained in this way, many of them will in a very few years be enabled to undertake farming on their own account, and thus help to fill the vacant spaces of the Dominion and to annually contribute new wealth to the national credit in the form of farm crops."

An account of the work carried on in Canada in connection with juvenile immigrants is given on another page of this issue.

Police pension fund in Toronto

Some account was given in the LABOUR GAZETTE for May, 1924, of the provision made by various municipalities throughout Canada for superannuation of their employees. Among these mention was made of the Toronto Police Fund, to which each member of the force was required to contribute seven per cent of his salary. The fund at one time was practically self sustaining, but the city came to its aid with occasional subventions and has recently been contributing $10,000 each year. The Police Fund was declared lately by local actuaries to be insolvent. A readjustment was discussed in February by the Board of Police Commissioners and a committee of the contributors, who subsequently made the following recommendations for the reorganization of the Fund:—That in future the maximum pension be $2,000; that all ranks contribute 9 per cent instead of 7 per cent to the fund; that the 5-90th salary added to the chief's pension be struck off; that the period of service be raised from 25 to 30 years before a man is eligible for pension, and that the city council be asked to increase its annual contribution to the fund.

Retiring pensions are now provided for policemen in Montreal and Westmount, Que., Winnipeg, Man., Vancouver, B.C., Toronto, Ont., London, Ont., and Hamilton, Ont.

Municipal pensions in Montreal

The Montreal City Council is now considering the question of establishing a general pension fund for the benefit of civic employees. The City has already a special pension fund on a non-contributory basis, for certain classes of employees, about $100,000 being paid out annually from this fund. The City Council having passed a by-law in 1917 providing that employees compelled through incapacity or illness to resign from the service after ten years' of employment should receive a pension amounting to one-fifth of their salary; after 20 years, one-third and after 35 years, one-half their salary, but the amount of the pension must in no case exceed $3,000 in a year. No provision has been made as yet for employees in the lower grades of the service, but an actuary is now engaged, it is stated, in classifying the employees, and will shortly present a report to the Council with a view to the establishment of a general pension plan.

Pensions for Street railway employees at Montreal

Unaminous approval was given by fifteen hundred employees of the Montreal Tramways Company on February 27 to a pension plan offered by the Company and approved by the City Council. The plan was to take effect as soon as some minor details were further considered. In the negotiations with the Company the men were represented by Messrs. Gerard Gagnon, president of the Amalgamated Association of Montreal Tramway Employees, Henry Champagne, agent, and Raoul Trepanier, secretary-treasurer. The pension contract will be for a five-year period expiring on December 31, 1930. In order that the period of the existing working agreement might be made to coincide with the pension period, a further proposal was made to extend the working agreement from July 31, 1927, when it would otherwise expire, until December 31, 1930. This extension was sought by the employees themselves, to protect them against the possible risk that the pension plan might involve a lower rate of wages when the next working agreement comes under discussion. Ratification was given to this proposal also. The consent of the City Council of Montreal was necessary before a pension fund could be instituted, the city having been a party to the agreement under which the company received its charter from the Provincial Legislature. This consent was obtained early in February, when the Executive Committee of the City Council passed a resolution approving the proposal.

The provisions of the new pension plan are as follows:—Approximately $120,000 is to be set aside by the Company annually as its contribution to the pension fund; the employees to contribute $2 a month. The benefits will be as follows:—Sickness, $45 a month after the first seven days; accident necessitating more than seven days absence from work, $45 a month; disability, $45 a month. If the disability is permanent and the man can never work again he is entitled to receive during his lifetime the death benefit of $1,000; pension, $45 a month when the employee has reached the age of 65 years. An employee if able to continue his work is not however, obliged to retire at that age. All employees of the Company will be admitted under the pension scheme without medical examination.

Alberta teachers and conciliation

The Edmonton Public School Teachers' Alliance once more call attention to alleged defects in the Alberta School Ordinance Act in regard to the provision respecting the appointment of a board of conciliation in cases of disputes between school boards and teachers. The Labour Gazette for May, 1924, contained a note on the same subject. The recent action of the Alliance was suggested by a dispute at Blairmore, where the members of the local board failed to reach an understanding with their teaching staff. The section of the Act referred to was added by an amendment of 1921 as follows:—

"151a. (1) Whenever it is made to appear to the minister that any disagreement or dispute between any board of trustees and their teacher or teachers has arisen or may arise, where such disagreement or dispute in the opinion of the minister relates to the proper carrying out of the contract entered into between the board of trustees and such teacher or teachers, the minister may appoint a board which shall be known as a 'Board of Conciliation' to inquire into and investigate any such disagreement or dispute, and to make such report thereon as is just and reasonable, and in the conduct of such investigation said board may take evidence under oath or upon affirmation.

"Provided, however, that no board of conciliation shall have power to intervene in connection with negotiations between any teacher and a school board with respect to any new contract or any extension or amendment or renewal of any contract already in existence.

"(2) Every such board of conciliation shall consist of three members, one representing the school trustees of the province, one representing the school teachers of the province, and the chairman of the board who shall be neither trustee nor teacher."

The Edmonton Alliance takes the position that the foregoing section is ineffective as it expressly excludes intervention by the board in connection with disputes regarding new contracts.

The Alberta Teachers' Alliance, according to its general secretary, Mr. John W. Barnett, is asking that a permanent board be appointed to which all disputes would automatically come. "At the present time the minister has the power to appoint a board only if he sees fit, and it is felt that with a permanent board appointed the disputes would get quicker consideration and at the same time be settled as any new legislation passed would have provision for enforcing the decision of the board when reached. At the present time there are no provisions for enforcing any awards, even if a board is appointed. As a safeguard against frivolous complaints taking up the time of the board the Teachers' Alliance proposes that a fee of $25 be deposited with each complaint, to be forfeited if the complaint is decided to be frivolous. That such a board would not often be called on to function is shown by the experience in Manitoba, where in two years the board has only been called into action six times."

South African "Social and Industrial Review"

The *South African Labour Gazette,* which was first issued in April, 1925 (LABOUR GAZETTE, June, 1925, page 549), is now appearing in an enlarged form under the title of the *Social and Industrial Review.* An introductory note in the first issue of the new series states the objects of an official labour review as follows:—

"Seeing that the functions of the Department of Labour bring it into close contact with the work and life of the people whose welfare is its particular concern, a means of publishing authoritative information bearing on the industrial, economic, and social questions of the day is not only desirable—it is vital. Nothing is more easy than for a Department of State to acquire the spirit of bureaucracy and aloofness from the public whom it is constituted to serve, but in the case of a Department charged with the primary duty of promoting social welfare the existence of such a spirit would be supreme folly. A certain degree of contact can, it is true, be maintained with sections of the population by means of the staff, particularly the senior headquarters staff and the field staff of the Department; but touch on a wide scale can only be secured through the pages of this *Review. . . . The Social and Industrial Review* as the means of securing publicity and maintaining contact should command the interest and support of a public wider even than South Africa, including as it will that world-wide public which is coming to realize that no country can any longer stand alone and that the good health of one is the essential concern of all."

Wage pooling and efficiency

The Shipping Federation of Canada, at their annual meeting held at Montreal in February, issued a statement to the effect that the system under which pilots in the Montreal pilotage district pool their wages "destroys initiative and militates against efficiency." This allegation was strongly denied by C. B. Hamelin, secretary of the Pilots' Union. The pooling arrangement referred to was fully described in the LABOUR GAZETTE, November, 1924 (page 1016), in connection with a decision of the Supreme Court of Canada in the case *Angers versus Gauthier.* This case involved the question of the right of the pilots to enter into a binding agreement to pool their wages, the Supreme Court maintaining the validity of such an agreement. The appellant in the case, a pilot who had refused to pool his wages as required by the terms of the agreement, was declared by this decision to have been unjustified in his refusal. The Federation, however, in their recent statement, still assert that the pooling system is contrary to public policy and tends to impair efficiency. "Originally," they say, "the pilots paid their earnings into their corporation, to be distributed, but the government ruled against this. Then the pilots formed a union and still persist in pooling their earnings. Furthermore, the union reserves the right to fix hours after which pilots will not be permitted to take ships out; this interferes with the discretion of the commander. There are two classes of pilots—those who handle the line ships and the "tour de role" navigators. The former do more work than the latter, but under the system in vogue they are compelled to share their earnings with less efficient men and such an agreement must destroy the initiative of the better class of navigators. If, as the shipping companies suggest, pay depended on ability, this would encourage incentive and it would be much better for all concerned."

Group system of wage payment

The Westinghouse Electric and Manufacturing Company lately introduced at its factories at Pittsburgh group system of wage payment, the purpose of this system being to correct the faults associated with the individual incentive plan. The new policy is described in an article contributed by officials of the company to *Industrial Management* (New York). The fault of most incentive plans of wage payment, it is stated, is that they often stimulate individual effort on the part of the employee at the expense of co-operative team work. "Although the results obtained from

incentive systems have been remarkable, there are, at the same time, some disadvantages which occur from having a number of workers concentrating only on their own individual production. Each worker realizes that he is paid only for what he produces, and it is but natural that he should strive to increase his own output, regardless of all else." The group system is designed to meet this difficulty. Generally workers on the same class of work possess different abilities, and the greater producer is not willing to enter into an agreement with the lesser producer. Groups are therefore organized by the management, and a payment system devised whereby each man shares in the earnings of the group in proportion to the amount of time he works in the group, and in proportion to his ability. A "group" is thus formed of a number of workers doing the same class of work, who pool their entire output, and the method of distributing the earnings of the group among the workers is known as the Group System of Wage Payment.

Among the British acts of 1925 which affect labour was the Mining Industry (Welfare Fund) Act, 1925, which continues for a further five years the period during which a levy of a penny a ton is made on the output of each coal mine to provide a welfare fund, to be devoted to purposes connected with the social well-being, recreation, and conditions of living of workers in and about coal mines, and with mining education and research.

The forty-four hour working week was inaugurated on January 4 in New South Wales. A large number of unions applied to the Arbitration Court for a variation in existing awards in order to give effect to the new rule. A constitutional question has arisen as to the priority as between state legislation and federal awards. Already the Arbitration Court has decided that workers in the metal trades, who are governed by a federal award, are shut out from the benefits of the state legislation in regard to a forty-four hour week.

A Bill providing for establishment of an old age pension has been introduced in Rhode Island. Under its provisions persons 70 years of age or over who have resided in state continuously for 15 years would be eligible provided they have not been imprisoned for four months or more during 10 years immediately preceding request for pension and have not an income of $300 or more or property worth $3,000 inclusive of a homestead.

The Legislature of British Columbia at the recent session authorized the loaning of money by the province for the construction of dwellings on property purchased from the government in the University tract at Point Grey, Vancouver. This loan will, it is stated, further the sale of lots and stimulate building operations in the coming spring. The Government is to make regulations for the administration of the district, but there is no intention of creating elaborate and expensive administrative machinery. Plans will be of the simplest character, just sufficient to handle the affairs of the district efficiently. The government is to proceed immediately with the completion of Unit One of the University area and push the sale of lots. It is intended to make the subdivision attractive in its physical features.

Organized carpenters of the Vancouver City and New Westminster District met in an open mass meeting in February, approved the policy of a five-day week by a majority vote. The carpenters' unions have for some time been discussing the subject of a five-day week for the summer months, arguing that such practice would not interfere with the progress of building construction and would also tend to spread work more generally throughout the full year, removing an idle period previously experienced each winter. The question was to be taken up with the master builders.

The Ontario Workmen's Compensation Board awarded during the month of February $493,164.58 in benefits, $412,176.28 of this being for compensation and $80,988.30 for medical aid. The total benefits awarded during January were $425,349.23 and the total for February a year ago was $381,677,88. During the month of February 11,405 compensation cheques were issued to injured workmen and widows and other dependents throughout the province, and 5,213 cheques were issued in payment of medical aid. The accidents reported during February numbered 4,642, of which 26 were fatal, as compared with 4,465 during January and 4,096 during February a year ago.

The number of workpeople, other than seamen, reported as killed in the course of their employment in Great Britain and Northern Ireland during January, 1926, was 213, as compared with 266 in the previous month, and with 210 in January, 1925. Fatal accidents to seamen numbered 95 in January, 1926, as compared with 56 in the previous month; comparable figures for January, 1925, are not available.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

THE employment situation as reported by the local superintendents of the Employment Service of Canada at the end of February was as follows:—

From the Province of Nova Scotia activities in the fishing industry were reported as fair. Owing to the fact that some of the snow in the woods had been thawed, logging camps in some cases were re-opening and activities generally were more brisk in this industry; in some cases men were being taken on. Generally speaking manufacturing was normal for the season. The iron and steel industry was fairly active, while the biscuit and confectionery manufacturers were seasonally active in anticipation of the spring trade. Although some small casual work was being carried out, the construction industry was quiet. Fair activity was reported in the coal mining industry. Trade showed an improvement, while transportation was brisk.

In New Brunswick preparations were being made for the spring fishing, but at this particular time this industry was quiet. The deep snow in the woods was interfering with logging operations, although a fair amount of activity was reported in this industry. Manufacturing was rather busy with the pulp and paper and lumbering industries noticeably so. Except for small repair jobs construction was quiet, but the prospects for the spring were good. While trade, both wholesale and retail, was quiet, freights were reported as heavy.

Farm placements in the Province of Quebec reached their minimum for the year. With the season for river driving in the logging industry approaching, preparations were being made to that end, but few men were being taken on by this industry. The reports from this province on manufacturing were very satisfactory. Both Montreal and Quebec reported improvements in boots and shoes; the metal trades were more active; in Sherbrooke cottons and silks were busy, but woollens quiet; the pulp and paper industry in and around Three Rivers was busy; the tobacco trades and printing were not very active in Montreal, though other centres reported fair winter activity. Building and construction were quiet, but spring prospects seemed good. Trade was reported as slow, but transportation was about normal. Quite a lot of casual work was assisting in relieving unemployment.

In the southern portions of the Province of Ontario orders for farm help were increasing and had attained a rather large volume. As in other provinces the prospects for spring construction work were rather promising in Ontario, although work of this nature progressing at the end of February was in rather small volume. Some improvements in manufacturing were noticeable, particularly as affecting the iron and steel industry in southwestern Ontario. The pulp and paper industry continued its steady activity. Although some placements in the logging industry were reported from the northern section of the province, the customary slackening in this line was beginning to be noticeable. Mining remained busy, but there were no demands of any consequence for additional workers; some extensions in this industry were in prospect and awaited the milder weather before realization.

Farm orders received by the Manitoba employment offices were showing very considerable increase, while applicants were sufficiently numerous to care for all of them. The construction industry was quiet in this Province. Placements of workers in lumbering camps continued, although they were not so numerous as earlier in the season. Taken all in all opportunities for steady work presenting themselves were not very numerous.

Farm orders were increasing in all districts of Saskatchewan, but applicants were equal to the demand. The call for bush workers in the Prince Albert district was declining. Construction work was rather quiet, though here again the prospects were reported as fair. There was a small demand for casual help, and though some unemployment was reported from nearly every centre, the volume was not exceptional for the season of the year.

As in Saskatchewan, the demand for farm help in the Province of Alberta was showing a considerable increase, though the supply of men was ample. With the approaching end of the winter logging operations were decreasing, and consequently placements were few. Owing to the fact that spring-like weather was in evidence somewhat earlier than usual, the prospect of an earlier start on building and construction was good. The coal mining industry was slack. Some unemployment was in evidence, but the prospects for spring work were good and it appeared that the surplus of workers should be absorbed into industry if the work projected for execution in milder weather materialized.

Both the logging and metal mining industries were quiet in British Columbia, although in the latter this statement refers more to the fact that not many additional workers were being taken on. Construction was seasonally quiet. The coal mining industry in the Nanaimo district was fairly active. Manu-

facturing industries in and around Vancouver showed some slight improvement and in other districts remained about normal. While the demand for labour received at the various offices was not large, it would appear that the volume of unemployment was somewhat less than was the case at this time of year for some years preceding.

Employers' Reports.

According to employers' reports on employment, there was partial recovery on February 1 from the losses registered at the beginning of the year, but the revival, like the decline from which it was a reaction, was less extensive than on the corresponding date last year. The situation this year was, however, decidedly more favourable than at the beginning of February, 1925. The index was slightly higher than at that time in any other year of the record except 1924, when it was practically the same.

Recovery was noted in all except the Prairie Provinces; Ontario recorded the largest increase. In the Maritime Provinces, there were further gains that exceeded those registered on February 1 of last year. Logging, manufacturing, transportation and railway construction afforded greatly increased employment, but coal mining and highway construction were slacker. In Quebec, manufactures showed considerable gains and logging, construction, mining, services and wholesale trade also reflected improvement. On the other hand, retail trade and transportation afforded less employment. In Ontario, manufacturing and logging reported heightened activity, while continued decreases were indicated in construction, trade, and transportation. In the Prairie Provinces, there were further large losses in transportation and construction; trade, manufacturing and coal mining also reported reductions. In British Columbia, manufacturing, logging and shipping registered the greatest improvement, while construction showed a falling off.

Hamilton, Windsor and Vancouver registered increases in employment; in Ottawa there was a decline, while in Montreal, Quebec, Toronto, and Winnipeg very little general change was shown. In Montreal, there was substantial recovery in manufacturing, while trade and construction were seasonally slacker. In Quebec, manufacturing was more active, but construction and trade showed decreases. In Toronto, pronounced gains in manufacturing were almost entirely offset by losses in retail trade. In Ottawa, curtailment in construction and trade caused employment to decline. In Hamilton, manufacturing recorded considerable recovery, while construction was slacker. In Windsor and the other Border Cities, the resumption of operations in automobile factories temporarily closed down caused pronounced improvement in employment. In Winnipeg, gains in the printing and some other industries were offset by reductions in construction. In Vancouver, lumber and iron and steel works employed larger payrolls and shipping was also more active.

Within the manufacturing division the greatest increases were in iron and steel. The textile, lumber, pulp and paper, leather, tobacco, non-ferrous metal and vegetable food groups also showed considerable improvement. Seasonal declines, however, continued to be shown in fish, meat and dairy product establishments and in building material works. Logging camps registered decidedly heightened activity. Mining, transportation, construction and retail trade, on the other hand, released a large number of workers, the losses being chiefly of a seasonal character.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of February, 1926.

Trade Union Reports

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month, with consequent variations in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The trade union situation at the end of January, as indicated by returns from 1,547 local trade unions, with an aggregate membership of 146,999 persons was slightly less favourable than in the previous month, 8.1 per cent of the members being unemployed on January 31st as compared with 7.9 per cent in December. Improvement was, however, recorded over January of last year when the unemployment percentage stood at 10.2. In comparison with December the most substantial reduction was reported in Nova Scotia owing to lessened activity in the coal mines. Considerable short time continued to be registered in the mining areas. Ontario, Manitoba and Saskatchewan unions were less fully engaged although the contractions were much smaller than those in Nova Scotia. Employment in Quebec increased to some extent, due principally to better conditions in the garment trades, and in New Brunswick and Alberta there were nominal gains. The British Columbia situation remained unchanged. Returns from 409

unions in the manufacturing division with 40,932 members showed an unemployment percentage of 7.9 at the end of January, as compared with percentages of 13.9 in December and 14.3 at the close of January, 1925. Garment leather and textile workers, metal polishers and cigarmakers were better employed than in December, and more work was also afforded hat and cap makers, iron, steel and wood workers. Paper makers and glass workers however, were slacker. Employment was at a considerably lower level in the coal mines of Nova Scotia than in December, but in Alberta practically no change occurred, and British Columbia miners again registered no idleness. Quarry workers in Nova Scotia reported a large percentage of their members unemployed. The percentage out of work in the building and construction group as indicated by 168 unions having a combined membership of 12,963 persons was 26.6 as compared with 21.0 per cent in December, and 27.5 per cent in January, 1925. All tradesmen in the group with the exception of electrical workers and tile layers, lathers and roofers were slacker than in December. In comparison with Janu-

*Figures for end of previous months. †Bradstreet. ‡*MacLean Building Review*. §For group figures see articles elsewhere in this issue. **Figures for four weeks ending February 27, 1926, and corresponding previous periods. ***The index of the physical volume of business includes, forestry, mining, manufacturing, employment in wholesale and retail trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes, forestry, mining, manufacturing and construction. Manufacturing includes consumers' goods and producers' goods.

ary last year, steam shovel and dredgemen, painters, decorators and paperhangers, and plumbers and steamfitters registered declines, and employment in the remaining trades increased. Transportation workers were slightly less active than in December, the gain in the shipping and stevedoring division being more than offset by the contractions in the steam and electric railway divisions. The situation in the transportation group was also slightly less favourable than in January, 1925. Retail shop clerks were not quite so active as in December. Hotel and restaurant employees and barbers were also not so fully engaged, but more employment was afforded theatre and stage employees and stationary engineers and firemen. Reports covering 779 fishermen showed that there was less activity than in either December or January, 1925. Lumber workers and loggers reported no unemployment.

Employment Office Reports.

The reports of the Employment Service of Canada for the month of January, 1926, showed 20,258 references to positions and a total of 19,009 placements. Of these the placements in regular employment were 12,805, of which 9,987 were of men and 2,818 of women, while placements in casual employment were 6,204. Vacancies offered by employers to the Service numbered 20,699, of these 13,628 were for men and 7,071 for women, while applications for employment were registered from 26,442 men and 9,546 women, a total of 35,988. A slight decrease was shown in the volume of business transacted when the above figures are compared with those of the preceding month and a somewhat greater reduction when a comparison is made with the records of January of last year, the reports for December 1925 showing 21,797 vacancies offered, 32,802 applications made and 20,523 placements effected, while in January 1925, there were recorded 26,807 vacancies, 42,059 applications for work and 24,908 placements in regular and casual employment. A report in detail of the work of the offices for the month of January 1926 will be found elsewhere in this issue.

Production in certain industries

Some figures indicating the movement of trade and industry in February and in previous months are given in the table on page 224.

The Dominion Bureau of Statistics reported that January production of coke pig iron in Canada amounted to 56,644 long tons, an increase of 3 per cent over the 54,889 tons of December and more than double the 28,302 tons reported for January of a year ago.

Basic pig iron accounted for 44,749 tons or 79 per cent of the total, foundry iron 10,538 tons and malleable iron 1,357 tons as compared with the December output of 38,320 tons of basic iron, 1,972 tons of foundry iron and 14,597 tons of malleable iron. In January, 78 per cent of the total output was made for the further use of the producers. Nova Scotia produced 43 per cent of the total output and 55 per cent of the basic iron.

Blast furnace charges consisted of 102,792 long tons of imported iron ore, 63,478 short tons of coke and 34,560 short tons of limestone. For each long ton of pig iron made the materials charged to blast furnaces included 4,065 pounds of imported iron ore, 2,241 pounds of coke and 1,220 pounds of limestone.

On January 31, there were five furnaces in blast, the same number as in December. The active furnaces had a daily capacity of 1,825 tons per day or about 36 per cent of the total Dominion capacity and were located as follows: 2 at Sydney, N.S.; 2 at Hamilton, Ont., and 1 at Sault Ste. Marie, Ont.

Production of ferro-alloys at 2,224 tons was 26 per cent under the 3,008 tons of December but showed little change from the average monthly production in 1925 of 2,142 tons. The January output consisted mostly of the grade having a high manganese content, but small quantities of ferrosilicon were also produced.

At 68,536 long tons, the January production of steel ingots and castings in Canada showed an increase of 10 per cent over the 62,353 tons of December and a similar increase over the average monthly output of 63,000 tons in 1925.

Steel ingots made for the further use of the producers accounted for 66,221 tons as compared with an output of 60,699 tons of this grade in December, an increase of 9 per cent. Steel castings at 2,315 tons rose 40 per cent over the 1,654 tons of the preceding month and consisted of 1,224 tons of basic open hearth castings, 114 tons of bessemer castings and 977 tons of electric castings.

Pig iron prices at Montreal were higher in January, both No. 1 and No. 2 foundry being quoted at $29.25 as compared with $28.75 in December. At Toronto, prices were unchanged, No. 1 foundry being quoted at $26.85 and No. 2 at $26.35. The Bureau's index number for iron and its products (prices in 1913=100) was slightly higher, having risen from 147.3 in December to 147.5 in January.

Full statistics of coal production during January are not yet available. The output of coal from Canadian mines during December was 7 per cent less than the production for the preceding month, and 2 per cent higher than the average for December in the past five

years. The figures were 1,557,415 tons in December as against 1,663,078 tons in November and an average of 1,520,353 tons for the month during the five preceding years.

New Brunswick was the only coal-producing province of the Dominion which showed a gain in output in December over the preceding month, but Nova Scotia and Alberta showed increases over the average for the month in the five preceding years. Saskatchewan's production of coal was just equal to the average for the month in the five preceding years.

Men employed in the coal mines of Canada during December, numbered 29,732, of whom 22,944 worked underground and 6,788 on surface, as compared with a total of 29,321 in November of whom 22,603 worked under ground and 6,718 on surface. Production per man was 52.3 tons in December as against 56.2 tons per man in November. During December, the production per man-day was 2.5 tons, as compared with 2.6 tons in November. The tonnage lost (Table No. 5) was largely due to "lack of orders," "absenteeism," and "other causes."

EXTERNAL TRADE.

The summary of Canadian trade prepared by the Department of Customs and Excise shows that in January, 1926, the merchandise entered for consumption amounted to $69,736,042, as compared with $58,375,502 in January, 1925. The domestic merchandise exported amounted to $84,718,819 in January, 1926, as compared with $175,555,228 in December, 1925, and $75,347,012 in January, 1925. Foreign merchandise exported amounted to $997,012 in January, 1926, and $652,263 in January, 1925.

The chief imports in January, 1926, were: Fibres, textiles and textile products, $16,525,037; iron and its products, $12,372,719, and non-metallic minerals and products, $9,147,206.

The chief exports in the same month were in the groups of agricultural and vegetable products, mainly foods, $31,324,178; wood, wood products and paper, $19,587,928; animals and animal products, $13,076,404. In the ten months ending January, 1926, exports of agricultural and vegetable products, mainly foods, were valued at $469,681,687, wood, wood products and paper at $229,638,115, and animals and animal products at $168,337,101.

BUILDING PERMITS.

According to a report prepared by the Dominion Bureau of Statistics, the value of the building permits issued in sixty cities in Canada during the month of January, 1926, again indicated a decrease of 37.2 per cent as compared with the preceding month. In comparison, however, with the corresponding month of 1925, the decrease was 15.3 per cent less. The total value for January, 1926, was $4,608,688; for December, 1925, $7,341,752, and for January, 1925, $5,440,770.

The *Maclean Building Review* estimates the total value of the contracts awarded in Canada in February at $13,477,600 as compared with $12,669,000 in January and $11,047,600 in February, 1925. Of the contemplated new construction in Canada in February, 1926, $11,284,100 was for residential building; $15,756,000 for business building; $21,238,600 for industrial building, and $4,043,400 for engineering construction (including bridges, dams and wharves, sewers, watermains, roads and streets and general engineering).

During the first two months of this year construction contracts to the value of $26,146,600 have been awarded. This is an increase over the same period last year of 25 per cent. By classifications, the construction contracts awarded during this period were divided as follows: Industrial, 30.4 per cent; business building, 29.9 per cent; residential, 27.1 per cent, and engineering 12.6 per cent. The apportionment by Provinces was, Quebec, 35.6 per cent; Ontario, 35.4 per cent; Prairie Provinces, 20.3 per cent; British Columbia, 8 per cent and the Maritime Provinces, 7 per cent.

Strikes and Lockouts

The time loss due to industrial disputes in February was greater than during January, 1926, but less than in February, 1925. There were in existence during the month 11 disputes, involving 2,433 employees, and resulting in a time loss of 22,966 working days, as compared with six disputes in January, involving 357 workpeople and resulting in a time loss of 9,102 working days. In February, 1925, there were recorded 14 disputes, involving 3,066 workpeople, and a time loss of 27,013 working days. Three of the strikes and lockouts commencing during February, terminated during the month. At the end of the month, therefore, there were eight strikes and lockouts affecting 368 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

Prices

Retail food costs were somewhat lower, due mainly to substantial seasonal declines in the prices of eggs, and in spite of considerably higher prices for potatoes. The cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities was $11.50 at the beginning of February, as compared with

$11.63 for January; $10.93 for February, 1925; $10.75 for February, 1924; $10.53 for February, 1923; $10.61 for February, 1922; $14.08 for February, 1921; $16.92 for June 1920 (the peak); $12.54 for February, 1918; and $7.75 for February, 1914. Besides the decline in prices of eggs, decreases also occurred in butter, cheese, bread, lard and evaporated apples. Potatoes were substantially higher, while less important advances occurred in beef, veal, mutton, fresh and salt pork, and in bacon. Including the cost of fuel and rent with that of foods, the total budget averaged $21.87 at the beginning of February, as compared with $21.96 for January; $21.19 for February, 1925; $21.18 for February, 1924; $21.17 for February, 1923; $21.07 for February, 1922; $24.85 for February, 1921; $26.92 for July, 1920 (the peak); $19.80 for February, 1918; and $14.54 for February, 1914. Fuel was somewhat higher, due to advances in prices of anthracite and bituminous coal. Wood was slightly lower. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics declined slightly, being 162.2 for February, as compared with 163.8 for January; 164.8 for February, 1925; 156.8 for February, 1924; 153.6 for February, 1923; 153.5 for February, 1922; 191.1 for February, 1921; 256.7 for May, 1920 (the peak); 200.5 for February, 1919; and 192.0 for February, 1918. In the grouping according to chief component materials six of the eight main groups declined, one advanced and one was practically unchanged. The Vegetables and their Products group, and the Animals and their Products group showed the greatest declines, that in the former due mainly to lower levels for grains, flour and milled products, potatoes and rubber; and in the latter due to declines in the prices of eggs, which more than offset somewhat higher prices for hogs and butter. The other groups which declined were: The Fibres, Textiles and Textile Products group, due to lower prices for cotton, wool, flax, fibre, jute and hessian; the Non-Ferrous Metals and their Products group, due to declines in the prices of silver, lead, spelter and aluminum; the Chemicals and Allied Products group, due to declines in shellac and glycerine; and the Iron and its Products group. The Non-Metallic Minerals group advanced slightly, due to a rise in the price of gasoline. The Wood and Wood Products group was practically unchanged.

STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1926

THE number of strikes and lockouts in existence during February was 11, as compared with six in January. The time loss for the month was less than during February, 1925, being 22,966 working days, as compared with 27,013 working days in the same month last year.

Date	Number of disputes	Number of employees involved	Time loss in working days
February, 1926.....	11	2,433	22,966
January, 1926.....	6	357	9,102
February, 1925.....	14	3,066	27,013

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees at its commencement and lasting more than one working day. Disputes of only one day's duration, or less, and disputes involving less than six employees, are not included in the published record unless at least ten days' time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

17003—2

Five disputes, involving 197 employees were carried over from January. Three of the strikes and lockouts commencing during February terminated during the month. At the end of February, therefore, there were on record eight strikes and lockouts as follows: boot factory employees at Toronto; fur workers, Montreal; moulders, Owen Sound; stage hands, Vancouver; musicians, Vancouver; rubber factory employees, Montreal; boot factory employees, Montreal, and millinery workers at Toronto.

The record does not include minor disputes as described in the previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected thereby, although the unions or organizations concerned have not yet called them off. Information is available as to four such disputes, namely, cigarmakers, Montreal, commencing March 24, 1925; moulders at Galt, August 2, 1922; moulders at Guelph, June 2, 1924, and upholsterers at Montreal, June 27, 1925.

Of the strikes and lockouts commencing during February, three were against a reduction in wages, while the other three were to

secure or to maintain union wages and working conditions. Of the strikes and lockouts which terminated during February, all ended in favour of employees.

Information was received in the Department, too late for the February issue of the LABOUR GAZETTE, of three strikes which commenced during January. A strike of men's clothing factory workers occurred at Montreal, January 28, involving 195 employees and resulting in a time loss of 535 working days, and was caused owing to an alleged violation of the agreement on the ground that the contractors had been sending work to non-union shops. Negotiations were carried on which resulted in work being resumed. February 1, the employees winning their demands. The two other strikes, one of stage hands, the other of musicians, at Vancouver, remained unterminated at the end of January, and are included in the table as commencing prior to February.

The following notes give particulars in re-

STRIKES AND LOCKOUTS DURING FEBRUARY, 1926.

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and lockouts commencing prior to February, 1926.			
MANUFACTURING—			
Boots and shoes (other than rubber and felt)			
Boot factory employees, Toronto, Ont.	56	1,344	Commenced January 13, against changes in wages and working conditions alleged to be in violation of the agreement. Unterminated.
Fur and leather products (other than boots and shoes):			
Fur workers, Montreal, Que...	120	1,440	Commenced April 1, 1925, failure to renew agreements and proposed substitution of individual agreements. Unterminated.
Clothing (including knitted goods):			
Women's clothing factory workers, Montreal, Que.	.....	.....	Commenced December 9, 1925, against alleged violation of agreement. Information received indicates strikers secured work elsewhere and employment conditions no longer affected.
Iron, steel and products:			
Moulders, Owen Sound, Ont...	9	216	Commenced January 19, 1925, against a reduction in wages. Unterminated.
SERVICE—			
Recreational:			
Stage hands, Vancouver, B.C.	7	168	Commenced January 9, against alleged violation of agreement. Unterminated.
Musicians, Vancouver, B.C.....	5	120	Commenced January 11, in sympathy with strike of stage hands. Unterminated.
(b) Strikes and lockouts commencing during February, 1926.			
MANUFACTURING—			
Rubber products:			
Rubber factory employees, Guelph, Ont.	475	950	Commenced February 11, against a reduction in wages. Settled by negotiations and work resumed February 13; in favour of employees.
Rubber factory employees, Montreal, Que.	80	160	Commenced February 26, against a reduction in wages. Unterminated.
Boots and shoes (other than rubber and felt):			
Boot factory employees, Montreal, Que.	59	1,239	Commenced February 4, against reduction in wages. Unterminated.
Clothing (including knitted goods):			
Men's clothing factory employees, Montreal, Que.	1,500	16,500	Commenced February 2, to secure or to maintain union wages and working conditions. Settled by negotiations and work resumed February 13; in favour of employees.
Embroidery workers, Toronto, Ont.	90	405	Commenced February 4, to secure union wages and working conditions. Settled by negotiations and work resumed February 9; in favour of employees.
Millinery workers, Toronto, Ont.	32	424	Commenced February 12, to secure a signed agreement. Unterminated.

gard to certain disputes in addition to information given in the tabular statement.

Fur Workers, Montreal, Que.—In connection with the strike of fur workers at Montreal, which commenced April 1, 1925, thirteen of the strikers who had been arrested during the fall of 1925, and were allowed out on bail until February, were each fined $10 and costs, or one month in jail. There were charged with intimidating employees of one company, in May last, who had remained at work. At the end of February, it was claimed, 120 fur workers were still on strike.

Women's Clothing Factory Employees, Montreal, Que.—This dispute, which resulted in a cessation of work of 40 clothing workers on December 9, 1925, at Montreal, was due to an alleged violation of the agreement when the employer opened a non-union branch in the factory under separate management. The employer replaced the strikers to a great extent and information received during February indicated the strikers had secured work elsewhere, but the union had not called off the strike.

Stage Hands, Vancouver, B.C.—A strike of seven stage hands occurred at Vancouver on January 9, owing to the discharge of two employees. This was an alleged violation of the agreement which provided that seven stage hands were to be engaged during the theatrical season, but the manager decided to employ only five. Two weeks' notice was given the two to be discharged but when that time had expired all the stage hands ceased work. Conferences were held but no settlement was reached, although the manager claimed to have replaced the strikers by non-union workers.

Musicians, Vancouver, B.C.—On January 11, six musicians ceased work in sympathy with the strike of stage hands in the above mentioned theatre. At the end of February this strike remained unterminated.

Rubber Factory Employees, Guelph, Ont.—A strike occurred on February 11, of 475 rubber workers against a reduction in wages of ten per cent, which had been put into effect during January. Conferences were held and work was resumed February 13, at the rates in effect prior to the strike.

Rubber Factory Employees, Montreal, Que.—Eighty rubber factory employees ceased work at Montreal on February 26, against a reduction in piece work rates of ten per cent with a bonus according to production. The piece rates prior to the strike were estimated to afford average earnings of about 46 cents per hour. This strike remained unsettled at the end of February.

17003—2½

Boot Factory Employees, Montreal, Que.—A cessation of work occurred at Montreal on February 4, when 59 boot factory employees stopped work against a reduction in wages from two per cent to 20 per cent. This strike remained unterminated at the end of February.

Men's Clothing Factory Employees, Montreal, Que.—A strike occurred at Montreal on February 2, involving some 1,500 clothing workers in a number of establishments, who went on strike to establish union conditions and to secure wage adjustments. Negotiations were carried on and work was resumed at dates varying from February 5 to 13, the demands of the strikers having been granted.

Embroidery Workers, Toronto, Ont.—This strike occurred at Toronto on February 4, and involved 90 embroidery workers in the employ of five establishments. The embroidery workers had recently joined a union and demanded increased wages and a signed agreement. When this request was refused the cessation of work occurred. Negotiations were carried on and work was resumed February 9, the workers securing a signed agreement which provided for a 44-hour week, time and one-quarter for overtime until July, and time and one-half for overtime until January. They also obtained a closed shop and a fixed scale of wages for all workers, and in many cases secured increases in wages.

Millinery Workers, Toronto, Ont.—A strike of 32 millinery workers in the employ of four establishments, occurred at Toronto on February 12, when a request for a signed agreement was refused by the employers. On February 26, one employer signed the agreement, but at the end of the month three establishments were still involved in the strike.

The Bank of Montreal recently arranged with the Sun Life Assurance Company of Canada for insuring about 3,000 members of their staff under the group insurance plan. The Canadian Bank of Commerce put group insurance into effect for their employees in April, 1925 (Labour Gazette, August, 1925). Each employee of the Bank of Montreal who chooses to avail himself of the new arrangement is covered by a life policy ranging from $1,000 to $3,000, according to age. In the event of the insured person being totally or permanently disabled before the age of 60 years, the insured would himself receive the value of the policy. One of the inducements of the group scheme is that employees are not obliged to pass a medical examination in order to qualify.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

A NEW decision of the Canadian Railway Board of Adjustment No. 1 has been received by the Department. This board was established under an Order in Council dated July 11, 1918, while the war was still in progress, its purpose being to secure uninterrupted service on the railways. The board consists of six representatives of the railway companies and six representatives of labour, one for each of the railway brotherhoods.

Case No. 266. — Canadian Pacific Railway (western lines) and Order of Railroad Telegraphers.

In September, 1925, a station agent was informed by the company that 45 demerit marks had been placed against his record for having allowed a car on which charges had not been cleared to proceed beyond its destination, knowing that it was to be unloaded between stations without proper authority, and for not applying the tariff charges on the additional service. The company stated that the conductor in charge of the car in question, which contained a load of hay, accepted a bribe from the consignee, and informed the agent that he intended taking the car to a point beyond the station for unloading. The agent acquiesced, and no additional charge was made. The conductor subsequently returned the bribe money to the consignees through the agent as medium. The agent did not report the movement of the car, and did not hand over the bribe money to the consignees for more than a month. The employees contended that the discipline was excessive as no dishonesty had been proved against the agent, who had, however, been guilty of an error of judgment.

The Board denied the claim of the employees.

CANADIAN NATIONAL RAILWAY EMPLOYEES' BOARD OF ADJUSTMENT No. 2

THE Canadian National Railway Employees' Board of Adjustment No. 2 was established towards the end of 1925 for the purpose of adjusting disputes arising between the management of the Railways and the clerks and certain other office and station employees. The classes of employees coming under the Board are those given in the schedule of rules governing these classes which is contained in the existing agreement between the Railways and the Canadian Brotherhood of Railway Employees.

Board of Adjustment No. 2 is composed of the following members:—

Representing the railway—Mr. H. Morton, Moncton, N.B.; J. F. Aichison, Toronto, Ontario; D. Turney, Toronto, Ontario; W. A. Kirkpatrick, Saskatoon, Sask.

Representing the employees—Mr. A. R. Mosher, Ottawa, Ont.; M. M. Maclean, Ottawa, Ont.; N. L. Preston, Winnipeg, Man.; and C. H. Minchin, Calgary, Alta.

An outline of cases 1 to 9 which were dealt with by the Board was given in the LABOUR GAZETTE for December, 1925.

Supplement to case No. 6. — Sleeping, Dining and Parlour Car Department

In this case, which concerned the claim of the employees to have sleeping car conductors on certain sleeping cars between Halifax, N.S., and St. John, N.B., in conformity with article 14 of the agreement, the Board at the first hearing referred the case back to the parties concerned for further conferences. Failing a settlement the case was to be referred back to the Board within 30 days. At a further hearing on February 16 the Company submitted the following additional statement:—

"The assignment of sleeping car conductors, as set forth in article 14 in the present agreement, was put in the schedule for the purpose of showing the number of sleeping car conductors which would be required for each specified run in order to give each employee a reasonable amount of rest at their home terminal after the completion of their run, but the inclusion of this article in the schedule does not in any way obligate the railway company to use sleeping car conductors on any run. The use of sleeping car conductors on sleeping car runs is in the nature of a supplementary or super-service to that given by the sleeping car porters, and it is the railway's right and privilege to decide, at all times when sleeping car conductors are, or are not to be used. . . . . The present schedules were negotiated with employees of this department for the purpose of outlining the working conditions and rates of pay only, but were not intended to commit the railway company to employ a stated number of any class of employees on each

run specified in the present schedules, irrespective of changes in service, or variations taking place from time to time in conditions governing the service on any run."

The decision of the Board was that the schedule provides for both sleeping car conductor and porter on sleeping cars operated between Halifax and St. John regardless of the trains upon which such sleeping cars were operated. The Board denied the contention of the company that the purpose of the article showing the number of sleeping car conductors required for each specified run was solely in order to give such employees a reasonable amount of rest. The Board also disagreed with the contention that it is the railway's right and privilege to decide at all times when sleeping car conductors are or are not to be used so long as the present schedule is in effect. "In future when changes of this character are contemplated the railway and the employees will confer and mutually arrange as the manning of such cars prior to the change taking place. In view of the present existing conditions, the Board decides that sleeping car service between Halifax and St. John on trains Nos. 1.411, 8 and 20 may for the time being be operated with a porter in charge."

Case No. 10. — Operating Department, Central Region

In September and October, 1925, and in January, 1926, owing to lack of work on certain days, a number of freight checkers, loaders and truckers at Moreau Street Freight Shed, Montreal, were laid off in gangs for periods ranging from three to five hours, irrespective of their seniority. The employees claimed that the senior men should have been given a full day's work on such days and the junior men laid off, and the senior men affected, made claim in the regular manner for time lost.

Article 3, Rule (*k*) of the agreement provides that when a reduction in forces takes place the senior employees with sufficient ability to perform the work will be retained.

The employees stated that prior to September, 1925, it had been the practice to retain the freight checkers as they were monthly rated employees, and to lay off the truckers in accordance with their seniority; the truckers being paid on an hourly rate. This practice they maintained was still feasible. They maintained further that the railway effects a reduction in staff when they lay off employees for three or five hours per day and that same is a reduction in staff within the meaning of the schedule.

The company contended that where owing to lack of work the number of freight checkers, loaders and truckers are not required for the full day, it is quite proper to lay the employees off irrespective of seniority. As a matter of fact, the first paragraph of rule (*c*) of article 6, quoted below, makes specific provision as to the basis of paying such employees who do not work a full day:

> Employees required to report for work at regular starting time and prevented by local conditions from performing a full day's service shall be paid for actual time held or worked with a minimum of three (3) hours at *pro rata* rate.

The company stated further that the matter of laying off certain senior men for a portion of a day while junior men were held for service during the entire day was taken up as a grievance, and efforts were made to alleviate the situation, as far as practicable, the railway desiring to give the employees every consideration.

The Board sustained the claim of the employees.

Case No. 11. — Operating Department, Central Region

Mr. A. Bisson was employed as janitor at the bunkhouse, Cochrane, Ontario, at a rate of $103 per month. On September 24, 1924, Mr. Mark Rudyk, a section foreman, was injured, and owing to the fact that he was unfit to continue in his former occupation the railway on May 4, 1925 placed him in the position of janitor held by Bisson. The employees contended that as Rudyk was working as a section foreman under the "Maintenance of Way" schedule at the time he was injured, he had no seniority under the schedule for "Clerks and other Classes of Employees."

The company claimed that their action in this case was not in conflict with the schedule rates, and that "it will be generally conceded that the efforts of the railway to furnish employment (suitable to their capacity) to employees who have become physically unable to continue in service in their present positions, are in the interests of the employees as a whole." It was ascertained at the hearing that Bisson was 63 years of age.

The Board decided that Bisson should be returned to the position of bunkhouse attendant.

The Central Council of National Unions (Quebec) is considering the advisability of organizing a group insurance society, and the proposal has been referred to the Council's legal adviser.

DOMINION GOVERNMENT POLICY ON UNEMPLOYMENT RELIEF

THE last issue of the LABOUR GAZETTE contained a note outlining the policy of the Government in regard to unemployment relief, as stated by the Government leader in the House of Commons on January 28. The unemployment policy was subsequently set forth in an Order in Council (P.C. 315) approved by His Excellency the Governor General on March 2.

It should be clearly understood that requests for assistance must come to the Dominion Government through the provincial authorities.

(Text of Order in Council)

The Committee of the Privy Council have had before them a Report, dated 25th February, 1926, from the Acting Minister of Labour, submitting that representations have been received requesting financial aid from the Federal Government for the relief of distress due to unemployment, and that consideration has been given to the means which would seem best adapted to the relief of cases of distress resulting from unemployment.

The Minister observes that the question of unemployment relief is fundamentally a municipal and provincial responsibility, that Federal action must therefore supplement municipal and provincial efforts, must be designed on lines permitting close and effective co-operation with and supervision by municipal and provincial authorities and must be proportioned by the efforts of those authorities.

The Minister, having these various points in mind, recommends that the following Federal policy of basic principles on unemployment relief be approved:

1. That, where distress exists as the result of unemployment and the situation has reached a point beyond the financial resources of the municipality, and the municipality having approached the province, and the province makes proper representation to the Federal authorities, the Federal Government will contribute one-third of the disbursements made on account of unemployment relief, conditional upon the participation on an equal basis by the province concerned.

2. That, where in certain provinces there are unorganized districts without municipal government in which unemployment exists, and the provincial government finds it necessary to administer a system of unemployment relief, the Federal Government will reimburse the provincial government concerned to the extent of one-half of such disbursements for relief.

3. It is the desire of the Federal authorities that the provisions of this ordinance be interpreted to cover only disbursements for food, clothing and shelter, and, under certain conditions, medical attendance.

The Minister further recommends that the Federal Government agree to participate in the cost of work provided by municipalities to relieve unemployment on the following basis:

(*a*) Municipality to bear the normal cost, that is to say, the cost of carrying on the said work in the normal working season.

(*b*) Estimate of normal cost to be approved by Federal Government's engineers in the Department of Public Works.

(*c*) That municipal, provincial and Federal Governments bear equally and jointly the actual cost over the estimated normal cost, thereby encouraging the creation of employment where possible.

The above provisions to be in effect from January 1, 1926, up and until March 31, 1926.

The Committee concur in the foregoing recommendation and submit the same for approval.

(Signed) E. J. LEMAIRE,
Clerk of the Privy Council.

Family Allowance Compensation Funds in Belgium

At the Second Congress of Family Allowance Compensation Funds held at Brussels on 3rd November, 1925, a report was presented by the director of the Central Committee for the Study of the Question of Social Allowances which shows that at the end of August, 1925, twelve of these funds were in existence, and one—the Provincial Fund for the Centre District—was in process of formation. The number of firms affiliated to these funds was 773, with a total staff of 152,603. The total sum paid by the funds in family allowances since their establishment amounts to 28 million francs, and the monthly disbursement is estimated at about 1,550,000 francs. If the undertakings are added which distribute family allowances but are not affiliated to the funds the number of workpeople would be increased to between 300,000 and 350,000 and the total sum disbursed would exceed 60 million francs.

The amounts paid as family allowances vary from 10 to 52 francs to 30 to 200 francs a month for one to four children. The latter scale (*i.e.*, 30, 75, 135, 200 francs a month, plus 75 francs for each further child) is paid by the Family Allowance Compensation Fund of the National Textile Industry Federation, a fund which came into operation on 1st January, 1925, and which covers 15,500 workpeople and has an approximate monthly disbursement of 529,000 francs. Most of the funds pay maternity allowances varying from 100 francs for the first child with larger amounts for each subsequent child, to 250 francs for the first child, with smaller amounts for those following.

FACTORY INSPECTION IN NOVA SCOTIA IN 1925

THE eighteenth report of the Factories Inspector under the Nova Scotia Factories Act, lately received by the Department, covers the work of the year ending September 30, 1925. The business depression in some of the large industries curtailed activity to some extent, but at the close of the fiscal year there was evidence of increased activity, especially in the metal and lumbering industries. A large part of the report is devoted to the subject of accidents and their prevention. The number of accidents during the year was the lowest for any year since complete returns became available, and the number of fatalities was lower than in any year since factory inspection came into force.

Accidents.—The number of accidents during the year was 820, of which number six were fatal. In the preceding year period there were 1,308 accidents, including twelve fatalities. The average number of fatalities in former years was fourteen, the lowest number in any year having been 9 and the highest 26. Thus the figure of 6 for last year establishes, as the factory inspector states, a "surprising record." Included in the 6 fatal accidents is one that befell a workman who died after a long illness which was diagnosed as being caused by lead poisoning, and another that befell a night watchman in a wood-working factory, whose body was found in the ruins after the building was burned. There was also a notable record in the total number of accidents for the year. The average number of accidents per year for the eight years previous to the year just closed, covering the period that workmen's compensation has been in operation and for which it has been possible to get complete records, was 1,285, the highest and lowest number for any one year being respectively 1,703 and 989. Therefore, the total of 820 accidents for the past year is 36 per cent better than the average, and lower by about 17 per cent than the lowest in any previous year.

Accident Prevention.—The reduction in the occurrence of accidents, which is noted in the last paragraph is the best evidence in the progress of the accident prevention movement. The larger establishments are careful to provide the required safeguards, including machine guards and fences, and the difficulty is rather in connection with smaller factories, in which it is not alway easy to persuade the employer of the existence of accident hazards. The policy of the factories inspector is to enlist the sympathy of the employer and employee rather than to resort to compulsion.

The report lays stress on the importance of safety education. "Ignorance of the dangers incidental to the occupation, thoughtlessness, or inattention, disregard of rules or orders, lax discipline, and the absence of the safety spirit in those in authority are some of the real causes of most accidents. Personal caution is the most important factor in accident prevention, and because of the realization of this fact the modern safety movement, commonly known as 'Safety First,' has developed." It aims to inculcate in the workers habits of care and caution, to develop the safety spirit, to make workmen think along safety lines, and by giving them part in the organization to make them feel that they are exercising some control over things that pertain to their welfare. Education in safety is therefore the principal step in the elimination of accidents; it supplants the old belief that "accidents are bound to happen" by the modern idea that "accidents do not just happen, they are caused."

Progress was made during the past year in plant organization, a recent development in safety work, and the inspector's assistance was often sought for conferences with safety committees and groups of workmen. Special mention is made of the safety organization at the establishment of the Wentworth Quarries Limited at Windsor, N.S., which "marked an epoch in the history of industrial accident prevention in the province."

In saw-mills the accidents numbered 204, including one fatality. Most of these were in connection with machinery, the more frequent cause being the lath-machine, the trimmer saw, and the carriage stand. These three machines were responsible for 47 per cent of all the saw-mill accidents. However, a marked improvement is noted over the conditions formerly prevailing, when hardly a year passed without terrible fatalities. The remaining industries in the wood-working group, including pulp mills, were responsible for 142 accidents, with two fatalities. Other accidents were distributed by industries as follows: metal trades (except steel works) 56 accidents, one fatality; car building, 12 accidents; steel works, 180 accidents, one fatality; textile mills, 17 accidents, no fatalities; confectionery, food and bottling works, 47 accidents, one fatality (fifteen women were included among the injured in this group); cold storage, 25 accidents, etc.

Sanitation.—In regard to sanitation the inspector points out that the important problem in factory ventilation is the removal of dusts, gases, or fumes generated in the

manufacturing processes and injurious to the health of the workers. Exhaust systems for the removal of these are common in Nova Scotia factories, he says, but the proper method of removing these gases, etc., is a much more difficult matter than most people realize, and considerable energy and money have been wasted on installations which have not served the purpose intended. The nature of the dust or gas to be removed from its point of origin, the size and position of hoods and ducts, the size and speed of fans, and many other particulars connected with the installation of an exhaust system must be determined by a specialist in that line of business, if the system is to operate with the maximum of efficiency and the minimum of power.

In the other departments of sanitation the inspector has difficulty in some factories in securing full co-operation between the owners and workers. A marked improvement however, is evident in comparing present and past conditions, and factory inspection has been an important factor in the change.

Child Labour.—The inspector states that the employers generally are observing the laws respecting child labour, and children under 14 years of age are not being employed. Even in remote country districts or about saw-mills a small boy will very seldom be found working. The fact is that though fourteen years is the legal age, very few persons under the age of sixteen years are employed in the factories. The provision in the Factories Act which prevents boys or girls under the age of sixteen years from working more than eight hours per day and four hours on Saturday, has practically shut out from factory employment young persons under that age. It is obvious that an establishment working nine or ten hours per day would become disorganized if any considerable number of the employees could be employed for only eight hours. Occasionally a young person is found who is working more than the permitted number of hours. The employer explains some distressing circumstance in connection with the case and shows that the school authorities have permitted the employment, and also states that if the law is enforced the young person will have to be discharged. The inspector having no discretion in the matter must enforce the law, but the employer is always given to understand that in such cases it is most unfair that the inspector should be blamed for depriving some widow or distressed home of an income which is badly needed. It took many years of persistent and determined effort the report states, to establish the satisfactory conditions regarding child labour which now prevail in the manufacturing industries of this province, and it will require constant attention in the future to see that the standard is maintained.

WORKMEN'S COMPENSATION IN QUEBEC

THE Legislature of the Province of Quebec has before it a bill providing for a complete revision of the existing Workmen's Compensation Act in conformity with the recommendations of the special commission, whose report was outlined in the LABOUR GAZETTE for February, 1925. The Government invited suggestions for the improvement of the bill, and a number of amendments were adopted by the Legislature. The Act as finally passed will be fully described when the work of the session is outlined in a future issue.

Application

The bill, as introduced by the Honourable A. Galipeault, minister of labour, applies the principle of compensation to apprentices, workmen and employees engaged in building, factories or workshops, stone, wood or coal yards, lumbering operations, including the flotation of timber, transportation by land or water, in loading or unloading, gas and electrical business, building repair and maintenance of public roads, railways, tramways or other public utilities, mines and quarries, or any industry in which explosives or machinery are used. It also applies to commercial establishments where the accident is caused through an elevator or machinery. It does not apply to agriculture or navigation by means of sails.

Compensation 66⅔

For permanent incapacity the person injured would be entitled, under the proposed act, to two-thirds of his yearly wages, or in case of partial incapacity to two-thirds of the sum by which his yearly wage has been reduced. Dating from the date the incapacity shows its permanent or temporary character the allowance is fixed at one-half the daily wage if the incapacity lasts more than three days.

The allowance starts from the fourth day, but counts from the first day if incapacity exceeds ten days.

Such allowance would not be less than $8 a week, unless the daily wage totals less than

this amount. The compensation in case of death is to be payable to the widow in a life rent equal to 20 per cent of the yearly wages of the deceased, with an increase of ten per cent for each child until the age of sixteen years is reached. The widow would lose this compensation in the event of remarrying, but the children would still retain their portion.

Medical Treatment

Surgical, medical, pharmaceutical and hospital costs would be provided for a period of six months, and all necessary prosthetic and orthopedic appliances, and funeral expenses up to $100. The victim of an accident would be entitled to choose his own physician, hospital and druggist, who may sue the employer, liable according to a schedule fixed by the Lieutenant-Governor in Council.

Contributory Negligence

If the accident is the inexcusable fault of the employee the judge may decrease the compensation, or increase it if due to the inexcusable fault of the employer.

Insurance

The new Act would require that every employer must enter into an insurance guarantee sufficient to cover the entire payment of compensation in case of accidents, or deposit with the Minister of Public Works and Labour an amount sufficient to guarantee their solvency and the payment of such compensation. Anyone failing to comply with this provision after 60 days of its coming into force would be liable to a fine of from $100 to $1,000, or 30 days' imprisonment, to be repeated until the law is complied with.

Miscellaneous Provisions

Provision is made that no employers shall make any deduction from the salary of employees for an accident fund, even with their consent, and should this be done an employee leaving may obtain repayment of it within three months of leaving his employ.

Settlements or compromises effected without the sanction of the judge except in the case of temporary allowances are declared null *de jure*.

Lawyers are entitled to taxable costs only, and cannot exact any other fee or commission.

If the amount in dispute exceeds $200 an appeal lies to the Court of King's Bench before five judges, but only on questions of law. The judge in the court of first instance has the right to grant a weekly allowance to the person injured or his representative, before judgment or while an appeal is pending.

No action can be taken after one year from the date of the accident.

Employers outside the Act may come under it by special agreement with their employees.

The Act is scheduled to come into force on January 1, 1927.

JUVENILE IMMIGRATION IN 1924-25

THE Juvenile Immigration branch of the Department of Immigration and Colonization has published an account of its activities during the fiscal year 1924-25. The chief function of the branch is to look after the personal welfare of immigrant children and to assist them to become good citizens in Canada. The children are brought to this country by emigrating societies, who distribute them from receiving homes to situations previously selected and approved by the societies. The boys are placed almost exclusively in farm employment, and the girls in domestic service both in rural and urban homes. The percentage of actual failure among the juvenile emigrants is found to be very small, and they "compare favourably" with native Canadian children owing to the training and discipline they receive at the schools from which they originally come. The migration societies from time to time make up parties of children whom they consider suitable for settlement in Canada. Descriptive lists of these children are prepared and in due course the children are brought together for individual inspection and approval by overseas officers of the Department. Before date of sailing they undergo a further examination by a medical officer appointed by the Dominion Government. In this way care is taken to establish that the children are physically and mentally sound and suitable for migration.

A direct responsibility for the proper care and supervision of the children devolves upon the organization by which they were brought to Canada. These organizations, being the legal guardians of the children, are required to keep in touch with their wards by a regular and systematic visitation. Officers (both men and women) of the Juvenile Immigration branch are continuously moving about visiting the children in their homes and situations. This system of inspection begins a few weeks after the child is placed and continues until the child reaches the age of eighteen or later if need be.

Departmental records show that comparatively few children are found in unsatisfactory homes and situations. Each organization must have a knowledge of the standing of those with whom it places its wards. This information is secured in various ways, but chiefly by reports and recommendations obtained confidentially regarding employers, and by previous visits paid to the child's prospective home. Moreover, each child is placed under a definite agreement in writing in which the conditions of placement are set forth, thus making the guardianship and authority of the organization recognized and respected. These agreements may be terminated at the pleasure of the organization or the employer, should the former not find the situation desirable for the boy or in case the latter does not consider the boy suitable.

After completing their apprenticeship, during which the boys obtain a thorough knowledge of farm work in the older provinces, numbers take up land on their own account. Some become farm managers, and cheese and butter manufacturers. The great percentage are of thrifty habits and early begin saving their wages to reach the goal of their ambition to be farm owners. A number later attend the universities and agricultural colleges.

Applications for immigrant children last year were greatly in excess of the actual supply. In the period under review there were 13,971 applications, the number of immigrant children being only 2,000. At the end of the fiscal year 5,896 children were under supervision by the Department, 4,263 of this number being in Ontario and 761 in Quebec, comparatively few being in the western provinces. The most active societies during the year were the Salvation Army, the Barnardo Home, the Catholic Emigration Association, the British Immigration Aid and Colonization Association and the Church of England Society. These societies, besides many private agencies, have been actively engaged in the movement since 1886. During that time the Barnardo Homes alone have brought 26,447 children to Canada out of a total of 82,026 juvenile immigrants.

EMPLOYEES' PENSION SYSTEMS OF TWO CANADIAN COMPANIES

(1) Consolidated Mining and Smelting Company of Canada Limited

THE Consolidated Mining and Smelting Company of Canada, Limited, with headquarters at Trail, British Columbia, have established a pension system for its employees, to take effect from January 1, 1926. This company has about 3,350 employees. The system was explained in a booklet enclosed in the pay envelopes of all the employees on February 23, and the proposal is stated to have been favourably received by them. The contents of the booklet are reproduced in the following paragraphs:—

The Consolidated Mining & Smelting Company of Canada, Limited after careful consideration of the various pension systems in operation in other corporations has approved the following plan as the best and most liberal for employees who by long and faithful service have earned an honorable retirement.

The company establishes this pension system as an evidence of its appreciation of the fidelity, efficiency and loyalty of its employees.

In the administration of the pension system the Consolidated Mining and Smelting Company of Canada, Limited, the West Kootenay Power and Light Company, the Coast Copper Company and all other subsidiary companies are included.

Administration.—The administration of the pension fund shall be in charge of a pension board consisting of three members who shall be officers or employeees of the company and shall be appointed annually by the president or board of directors to serve for one year and until their successors are appointed and shall qualify.

Officers.—The Pension Board shall elect a chairman and a secretary from among its members. The pension board shall control the payment of pensions and shall make and enforce such rules as it may adopt subject to the approval of the Board of Directors.

Quorum.—A majority of the pension board shall constitute a quorum for all purposes.

Pension Fund.—The Comptroller of the Company shall be the Custodian of the fund and payments from the fund shall be made only by direction of the pension board.

Eligibility.—The pension board may authorize the payment of a pension to any employee on the following basis:

Employees who shall have reached the age of sixty years and have been fifteen or more years in the service of the company, or the age of fifty-five years and have been twenty-five years in the service.

Provided that the pension board may at its discretion in exceptional cases grant pensions to employees not qualifying as above.

Service.—The term of service shall be reckoned from the date the employee entered the service of the original company whose property and business shall have become those of the Consolidated Mining & Smelting Company of Canada, Limited, or any subsidiary company.

Absence.—A temporary absence on account of illness or of reduction of force will not be considered as a break in the continuity of service, unless such absence exceeds six consecutive months, when it may be deducted in computing the length of actual service. Any employee leaving and remaining out of the service for more than two consecutive years, who shall be re-employed, shall be considered as a new employee in his relation to the pension system.

Allowances.—The board of pensions may, at its discretion, authorize to be paid monthly pensions to employees retired as follows:

For each year of active service an allowance of one per cent of the average annual pay during the ten years next preceding retirement, but no pension shall exceed $2,500 per annum or be less than $20 a month.

Payments.—Pensions shall be paid on the first of each month from the date of retirement until the death of the employee.

Assignments.—Pension allowances shall be non-assignable and any transfer or pledge of same will not be recognized by the pension board and may, at its discretion, work a forfeiture of the pension.

Suspension.—At its discretion, or in case of gross misconduct on the part of any pensioner, the pension board may suspend or terminate any pension allowance or pay same to a member of the family of the pensioner.

Other Employment.—The acceptance of a pension on the part of any employee will not debar such employee from engaging in any other business provided, in the judgment of the pension board, the same is not prejudicial to the interests of this company or of any subsidiary company. The acceptance of a pension, however, will debar any employee from accepting employment with any other company in the same business and shall be suspended as to any employee re-entering the service of the company.

Not a Contract.—Neither the establishment of the pension system, nor the granting of a pension, nor any other action now or hereafter taken by the pension board, or by the officers of the company, shall be held or construed as creating a contract or giving to any employee any right to any pension allowance, or any right to be retained in the service, and the company expressly reserves its right to discharge without liability any employee whenever the interests of the company may, in its judgment, so require.

New Employees.—From and after the date of the establishment of the pension system no inexperienced person over thirty-five years of age and no experienced person over forty-five years of age, entering the service after the date of the establishment of this pension system, shall be eligible to a pension, but the above age limits shall not be operative in the case of persons possessing special technical or profesional skill.

(2) British Empire Steel Corporation

THE annual report of the pension fund of the British Empire Steel Corporation for the year 1925 shows that at the end of the year 177 persons were receiving pensions, while ten more claims had been approved, though the claimants had not yet retired from active service. The following table given is a summary of the pensions granted and in effect, as they relate to the several companies included in the corporation, and of the amounts paid from the fund since its establishment.

	Number granted	Number lapsed or suspended	Number in effect	Amount paid	Age of Pensioners				
					Up to 65 years	66 to 70	71 to 75	76 to 80	81 to 87
				$ cts.					
Dominion Coal Company	80	10	70	37,889 07	10	31	26	8	5
Nova Scotia Steel and Coal Company	61	6	55	20,506 30	3	31	13	13	1
Acadia Coal Company	22	1	21	11,795 20	.....	9	10	2	1
Cumberland Railway and Coal Company	17	5	12	3,068 00	.....	7	5	5	
Dominion Iron and Steel Company	20	4	16	4,079 75	3	9	4	3	1
Eastern Car Company	4	1	3	402 25	.....	2	2		
	204	27	177	77,740 57	16	89	60	31	8

Most of the persons receiving pensions were of advanced age, 43 being 75 years of age or over, and eight being 80 or over when they retired. Out of sixteen men whose period of service was over fifty years no less than eleven had a record of fifty-five years or more; six made good their claim to continuous employment for sixty years or more, and one veteran had served sixty-five years.

The *Besco Bulletin,* published by the Corporation, points out that there is a "remarkable sameness in the average age at which coal miners in different districts retired." This is shown by the figures given for average age of retirement in the following table:—

	Average age at retirement	Average length of Service
Dominion Coal Company	70·4	44·9
Nova Scotia Steel and Coal Company, Sydney Mines	70·2	43·0
Acadia Coal Company	71·3	37·3

There was some difference in the figures for other industrial workers, but it will be noticed that those employed at the big steel works seem to have shown greater endurance than those whose work is generally regarded as less exacting and less arduous, although from the shorter time that these works have been in existence the period of service is comparatively short.

	Average Age	Average Service
Dominion Iron and Steel Company	70·9	26·2
Nova Scotia Steel and Coal Company, Trenton Works	67·5	36·0
Eastern Car Company	69·0	34·8

The amount of the pensions granted is based upon whole length of service and upon the average earnings during the last ten years of employment, subject to the provision that the maximum amount shall not exceed $900 per annum.

Of the seventy-one pensions granted in 1925 one was the maximum amount; one was $768; three exceeded $600; four were from $480 to $600; fourteen ranged from $360 to $480; and the remaining forty-eight were less than $360. The average of all pensions granted since the institution of the fund is $334.20 per annum.

Details of Plan

The Corporation, in November, 1923, made known the details of its plan to provide pensions for all its employees, including those of its subsidiary companies, namely the Dominion Steel Corporation, Limited; The Dominion Iron and Steel Company, Limited; The Dominion Coal Company Limited and its subsidiaries; The Cumberland Railway and Coal Company; The Nova Scotia Steel and Coal Company Limited and its subsidiaries, and the Halifax Shipyards Limited and its subsidiaries. The statement was as follows:—

Administration.—The fund shall be administered by a Committee to be known as the Pension Committee, composed of not less than five nor more than nine members, employees of the Corporation and its principal Constituent and Subsidiary Companies, appointed by the Board and holding office during its pleasure.

The Committee shall from time to time report all its actions and decisions to the Board for confirmation but subject to such confirmation or to any modification that may be made by the Board all actions and decisions of the Committee shall take effect as from the date of the action or decision of the Committee.

The Committee shall make rules for the efficient operation of the Fund which upon approval by the Board shall determine its procedure in all cases.

The Committee shall have power:

(*a*) To determine the eligibility of employees to receive pensions.

(*b*) To fix the amount of such pensions.

(*c*) To discontinue payment of pensions for cause.

Pensions.—Pensions shall be granted:

1. To any male employee who has been twenty-five years in the service and who has reached the age of sixty-five years or more, and who is retired from service either at his own request or the request of his employing officer.

2. To any female employee who has been twenty-five years in the service and who has reached the age of fifty-five years or more, and who is retired from service either at her own request or the request of her employing officer.

3. To any employee who has been fifteen years in the service and who during the course of his employment has become permanently and totally incapacitated for further service.

4. The Board of Directors of the Corporation may in its discretion instruct and direct the Committee to include in the Pension Scheme employees whose length of service has not reached the limits above provided for, or employees who may for other reasons be ineligible for pensions under these regulations.

Pensions shall not be paid to persons who are in receipt of or entitled to payments from any fund to which the corporation in any way contributes, nor to persons in receipt of or entitled to statutory compensation, except in so far as the amount of pensions otherwise payable may exceed such compensation.

Amount of Pension.—The amount of pensions which shall be paid monthly to persons retired under the provisions of the scheme shall be at the rate of one per cent of the average monthly pay received by them during the last ten years of their service multiplied by the number of years of their entire service.

Illustration.—An employee has been in the service 30 years and during the last ten years has received $1,000 per annum or $83.33 per month. His monthly pension would be 1 per cent of $83.33 or .833 multiplied by 30, equal to $25.

Provided, however, that no pension shall be more than $75 per month.

General Regulations.—1. Pensions under the scheme will be paid only to those employees who have given their entire time to the service of companies included under the provisions of the scheme.

2. The acceptance of a pension under the scheme shall not bar any retired employee from engaging in other business as long as such other business is not of the same character as that of the corporation or its constituent or subsidiary companies.

3. Length of service shall be reckoned from the date since which the employee has been continuously in the service to the date when retired, and in the final result a part of a year if less than a half shall not be counted; if a half or more than a half it shall be counted as a full year.

4. Time lost prior to 1st October, 1923, through leave of absence or suspension not exceeding six (6) months, or temporary lay-off on account of reduction in force, or disability, not exceeding two (2) years, shall not be deducted in reckoning the length of service; and dismissal, voluntarily leaving the service, or cessation of service by reason of absence in excess of the prescribed limitations, followed by reinstatement in the service within two (2) years, shall not be considered

as breaks in the continuity of service, but the time lost shall be deducted in reckoning the length of service.

5. No credit shall be given for time lost from 1st October, 1923, through leave of absence, suspension, lay-off (except in seasonal occupations) or disability. Employees will lose all credit for previous service if they remain absent from the service longer than six (6) months on account of leave of absence or suspension, or longer than two (2) years on account of lay-off due to reduction in force, or disability, provided, however, that employees injured while on duty may retain credit for previous service until termination of the period for which statutory compensation is payable, if such employee then immediately returns to work. Employees who quit the service will lose credit for all previous service. Employees who are discharged from the service will lose credit for all previous service, unless re-employed within six (6) months.

6. Pensions shall be paid to the pensioners in person, at the close of each month after the date of commencement, which shall be fixed in each case by the Committee and until revoked by the Committee or until the month succeeding that in which the death of the pensioner occurs.

7. Pensions may be suspended or terminated in case of misconduct on the part of the pensioner or for any other cause sufficient in the judgment of the Committee to warrant such action.

8. In order that direct personal relations with retired employees may be preserved and that such employees may continue to enjoy the benefits of pensions granted them no assignment of pensions will be permitted or recognized under any circumstances neither shall pensions be subject to attachment or other legal process for debts of the beneficiaries.

9. The decision of the Committee determining the rights of employees under these regulations shall be final, subject to a right of appeal to the Board of Directors provided notice of appeal is given within thirty days of the date of the action of the Committee against which the appeal is made.

The decision of the Board shall be final and conclusive.

10. Neither the erection of this scheme nor any other action at any time taken by the Board of Directors or the Committee, shall give to any employee a right to be retained in the service, and all employees remain subject to discharge to the same extent as if this Pension Scheme had never been created.

11. The pension scheme and the regulations respecting it may be amended or repealed at any time by the Board of Directors at its discretion.

Special Arrangements.—Special arrangements must be made to meet conditions in connection with Dominion Iron and Steel Company, Limited, which was incorporated in 1899, less than twenty-five years ago. None of the employees can qualify for pensions under the regulations which require twenty-five years service and there are in the employ a number of persons who have reached the age limit.

Some of these may be able to qualify through previous service with Dominion Coal Company or Nova Scotia Steel and Coal Company or some one or other of the Companies which have been taken over by them.

Others may require to have service imputed to them, or to have special exemption from the regulation in respect to service.

In order to meet this condition generally and to add flexibility to the scheme, power is given to the Board of Directors in section 6 under the heading Pensions, to nominate as pensioners such employees as may need to be superannuated but are ineligible because they have not served the full term of twenty-five years or for some other reason.

Hudson's Bay Company's Immigration Plan

The Hudson's Bay Company has formed an emigration agency in Europe under the title "Hudson's Bay Company Overseas Settlement Limited."

At present the company is confining its operations to placing persons coming to definite positions, and the new organization will be used by persons already settled in Canada to bring out their friends, still in Europe, to join them in their new homes. A larger scheme for settling families on the land is still under advisement at the head office in London.

The Hudson's Bay Company has approximately 3,000,000 acres of land to settle, but in the scheme which is in process of development, it is intended that the services of the Overseas Settlement organization shall be open to persons wishing to settle on lands other than those owned by the company.

A distinctive feature of this new service is the company's paternal interest in the newcomer. The best advice is available through its offices with regard to settlement and later purchase of land. Immigrants are met by company representatives, on arrival, and are kept in touch with until they have "dug in," in their new homes, and settled down happily and contentedly.

PROGRESS OF GROUP INSURANCE

A SPECIAL article in the New York *Times* of February 21 states that group insurance has gained so firm a foothold in the United States in the last decade that its underwritings amount to about three billion dollars. Experts regard the mass method of insuring as a means of bringing employer and employed into close and harmonious relations. Since the day ended when the "boss" knew every one of his men by name, the human bonds that used to bind industry together have disappeared in many quarters. Group insurance tends to restore the old friendly relationship, and thus, it is argued, exerts a stabilizing influence in business.

All groups insured by a typical company must be composed of at least fifty men. Above that number membership is unlimited. This form of insurance covers life, accident and sickness. The owner of a business having come to an agreement with the company, and having settled upon the conditions under which the plan is to operate, lays the proposal before his men. If 75 per cent of their total number acquiesce group insurance becomes valid for the entire organization. Each individual entering into the plan is required to sign a slip authorizing the paymaster to deduct a predetermined sum from his pay check, which covers the cost of his premium. The scale of premiums is, as a rule, settled upon by the employer and his Board of Directors, and it is common practice to base it on salary and length of service.

Aside from being less expensive than the ordinary policy, group insurance has this advantage—all men are accepted without physical examination. Many who are bad risks and who could not get an individual policy are thus eligible as one of the group.

"When we first began with group insurance nine years ago," said James E. Kavanagh, Second Vice President of the Metropolitan, "the employer bore the entire expense. It was not long until both the executive of the big companies and we ourselves found that this was not a workable scheme. The Santa Claus idea did not succeed. The hard-headed business man did not like the paternal attitude, but agreed to enter into our proposition if we could devise a way whereby the wage earner carried his portion of the expense."

Soon the "contributory plan" was worked out, employer and employee sharing in the cost of the insurance, the wage earner's portion to be deducted from his pay before it reached his hands.

The most recent offspring of the group insurance family is the thrift insurance plan. Under it the worker has an endowment savings account increasing month by month and maturing through the payment of $1,000 cash at the age of 60, provided he is less than 50 at the date the agreement is entered into, and that he remains with the company continuing specific contributions until he reaches the age of 60. If his age is 50 to 59 at the start of his account he will receive $1,000 cash ten years from the day he has joined the plan, immediate life insurance protection of $1,000 in addition and total and permanent disability benefits.

The cost of membership depends upon the age of the employee at the time of his entering into the plan and the length of his continuous service with the company. Once he has joined, the cost to him remains the same. Here, again, the plan is contributory. The longer the employee's service the more the company pays.

Development of Pulp Industry in New Brunswick

The Bathurst Company, Limited, recently announced plans for large developments in the pulp and paper industry, contingent on the passing of the necessary legislation at the session of the Legislature which opened on March 11. The proposed additions call for an expenditure of $5,000,000. Some hundreds of men will be employed in the erection of the plant, and on its completion the company will give employment to more than 1,000 men in the mills and woods. Authority is being sought to increase the hydro-electric power of the Bathurst Company to 20,000 continuous horsepower. At the present time the company's power plant on the Nepisiquit river is capable of developing 10,000 horsepower. This peak, however, is only available at extreme high water. In order to make available the full capacity of this unit and to add a further ten thousand continuous horsepower the company will expend some $1,750,000.

At the present time the Bathurst Company has one paper machine running with a capacity of 65 tons per day. When the mill was constructed provision was made for the installation of a twin unit bringing the present mill's total capacity up to 130 tons of newsprint per day. The old ground wood pulp mill, now operating, has two machines and is capable of producing 110 tons of pulp per day.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Thirtieth Session of the Governing Body

THE Governing Body of the International Labour Office held its thirtieth session in Geneva from January 28 to 30, 1925, under the chairmanship of Mr. Arthur Fontaine, French Government delegate.

The Governing Body considered what items should definitely form the agenda of the Tenth Session of the International Labour Conference, which is to meet in 1927. It was unanimously decided to place on the agenda the question of freedom of association and the question of sickness insurance.

The right of free association, the principle of which is among those embodied in the Treaty of Peace, is a question which has been more than once raised in connection with the International Labour Organization.

As regards social insurance, the detailed studies undertaken by the International Labour Office and the discussions on the subject at the 1925 Session of the Conference led the Governing Body to the conclusion that national legislations as a whole had sufficient in common to enable this question to be made the subject of international treatment.

The Governing Body also decided that a third question should be included in the agenda of the 1927 Session. The choice was between accident prevention, annual holidays with pay, and the method of fixing minimum wages in certain non-organized industries in which wages are exceptionally low.

By 13 votes to 7 the Governing Body chose the last-mentioned question, which had been submitted to it on several occasions as a suitable subject for discussion by the International Labour Conference.

The Governing Body proceeded to consider the scope to be given to the three questions which it had already decided to include in the agenda of the 1927 Conference. It was decided that the consideration of methods of fixing minimum wages should be directed chiefly, though not solely, to home work. As regards sickness insurance, the Governing Body was of opinion that the consideration of this subject might also include the consideration of questions concerning the position of foreign workers in relation to insurance. Further, as regards the question of freedom of association, it was unanimously agreed that this should be the subject of as wide and extensive a discussion as possible in the Conference.

In discussing proposed amendments to the Standing Orders of the Conference, the Governing Body considered the procedure of "two readings" of Conventions and Recommendations, introduced by provisional rules in 1924, and referred to the Governing Body for further examination, in view of certain criticisms to which it had given rise, by the Conference in 1925. A report was submitted by the Standing Orders Committee and was adopted, with slight amendments, by 16 votes to 6, for submission to the 1926 Session of the Conference. Under the proposals made in this report, the Conference would no longer be called upon to decide a second time on a Draft Convention or Recommendation adopted at a previous Session. The procedure would be this: At one Session the Conference would hold a general discussion on a given question which might form the subject of a Convention or a Recommendation, and at the following Session the Conference would take a decision on a final text for such Convention or Recommendation.

It was decided by a majority vote that in future the sittings should as a rule be public, but that they might be converted into private sessions in certain specified circumstances. Before this vote was taken, the Workers' Group declared itself unanimously in favour of complete publicity for the proceedings of the Governing Body.

The next Session of the Governing Body was fixed for April 21, 1926.

Mr. J. Bruce Walker, Director of Canadian Immigration in London, was appointed as one of a group of experts to attend a meeting of the Permanent Emigration Committee of the International Labour Office, which is to be held shortly to discuss the subject of inspection of emigrants on board ship, which is to come before the Eighth Session of the International Labour Conference in May next.

Great Britain and the Eight-Hour Day Convention

The King's Speech at the opening of the 1926 session of the British Parliament contained the following statement:—

Invitations are being issued to the Governments of Belgium, France, Germany and Italy to attend a conference in London to consider the possibility of securing an effective international agreement for regulating hours of labour.

Mr. Baldwin, the Prime Minister, in the course of the debate on the Address in reply to the Speech, said:—

"The question of the conference which is to be held on the matter of hours of labour arose in this way. The House will remember the Washington Conference and the regulation as

to hours in the Convention. I have always felt, and I know many Members on this side of the House have felt, that one of the most valuable methods in which we may be able to help and maintain our standards of labour in this country is to get more and more uniformity among the principal manufacturing countries, at least in regard to hours.

"It has always been a very simple matter to say that in this or that country you have 60, 50 or 40 hours, or any number of hours per week that you like, but you have to be sure in concluding agreements in which many countries speaking many tongues are joined together in ratification that you all mean the same thing by what you say; otherwise, you will find, owing to the exceptions allowed, and different interpretations of words and so forth, that you may have at the end of twelve months a completely different standard in each of those countries, and your last stage will be worse than the first.

"Without casting any reflection on other countries, I will say with regard to our country that when we make an agreement of that kind we do our best to fulfil it literally. Therefore it is all the more important that the literalness of the word should be understood. The House knows the difficulties which arise in interpretation between two bodies of men who trust each other—difficulties that arise about the interpretation of words on either side, sometimes of a single word or the meaning of a phrase.... If that is the case with the English language alone, how infinitely more difficult will it be when you come to half a dozen languages.

"So the Minister of Labour is inviting the Ministers of Labour of the principal manufacturing countries, together with Mr. Thomas, of the International Labour Office in Geneva, to meet in London and to come if possible to an agreement as to the terms employed in the limitation of hours, the forty-eight hours' week, and to have a careful examination of the exceptions that have been made, are being made, or are being suggested and to get complete agreement between those concerned.

"It is an extremely difficult task. I do not know whether we shall be successful. We shall do our utmost to secure complete agreement and understanding. If that agreement is reached, the ratification of the Washington Convention by the participating countries will then be possible, and we shall proceed to ratify, but we are not going to ratify until we are convinced that we all mean the same thing. Even if we do not come to a definite agreement, or an agreement so definite that we may be able to effect that particular ratification, yet I have every hope that we may usefully come to some agreement and get to make some real and substantial step forward in bringing about a unification, between the principal manufacturing countries, of hours of labour. I think it would be invaluable for all of us."

Railwaymen and the Convention.—On January 27 the terms were announced of an arrangement reached between representatives of the British railway trade unions and representatives of the General Council of the Trades Union Congress and the National Executive of the Labour Party, as the result of a discussion on the Washington Hours Convention in relation to the conditions of employment on British railways under existing agreements.

It was generally agreed, says the *London Daily Herald,* that the British Government should not be given any opportunity of making the alleged objections of the railway unions to the ratification of the Convention an excuse for its failure to introduce a Bill.

It was further agreed that the ratification of the Convention ought not, in any circumstances, to prejudice or disturb the existing agreements between the railway unions and the companies for a guaranteed day and a guaranteed six-day week; and that, as the railways and transports are a public service, where the working conditions are exceptional, a special clause should be drafted to meet these conditions.

A few days earlier, in the course of a declaration of policy made in the Reichstag, the German Chancellor made the following statement:—

"The Government will submit to the House a Bill codifying existing labour legislation and regulating anew the hours of work. The Government stands by the declarations made by former Governments with regard to the ratification of the Washington Hours Convention. Germany is going to bind herself to an international regulation of hours of work if the Convention is ratified simultaneously by Great Britain, France and Belgium also."

When it is recalled that (1) Italy has already ratified the Convention conditionally on its ratification by Belgium, France, Germany, Great Britain and Switzerland; (2) a Bill authorizing ratification by France when Grmany has ratified, has passed the French Chamber and is now before the Senate; and (3) a Bill for unconditional ratification has been approved by all the sections of the Belgian Chamber, it may be hoped that the combination of legislative and diplomatic action now in progress may presently produce decisive and valuable results.

The sixth anniversary of the foundation of the Central Council of National Catholic Unions of Montreal was celebrated on February 28.

UTILIZATION OF WORKERS' SPARE TIME

Recommendation of International Labour Conference on this Subject brought before the Dominion Parliament and Provincial Governments

REFERENCE was made in the LABOUR GAZETTE of August, 1924, to the Recommendation which was adopted by the International Labour Conference (League of Nations) at its Sixth Session in 1924 concerning the development of facilities for the utilization of workers' spare time. The text of this Recommendation was laid on the table of the House of Commons on February 22 by the Hon. Dr. J. H. King, Acting Minister of Labour. In bringing this Recommendation before Parliament Dr. King observed that the proposals contained therein were considered by the law officers of the Crown and were found to be mainly within provincial jurisdiction. An Order in Council, dealing with the extent to which the subject matters of the Recommendation fall within the competence of Parliament or of the provincial legislatures, was also tabled by the Acting Minister of Labour. Copies of this Order in Council have been sent to the respective provincial governments.

The text of the Recommendation concerning the development of facilities for the utilization of workers' spare time is as follows:—

Text of Recommendation

Whereas in adopting at its First Session, held at Washington, a Convention on hours of work, the General Conference of the International Labour Organization had as one of its principal aims to secure for workers, beyond the necessary hours for sleep, an adequate period during which such workers could do as they please, or, in other words, an adequate period of spare time; and

Whereas during such spare time workers have the opportunity of developing freely, according to their individual tastes, their physical, intellectual and moral powers, and such development is of great value from the point of view of the progress of civilization; and

Whereas a well directed use of this spare time, by affording to the worker the means for pursuing more varied interests, and by securing relaxation from the strain placed upon him by his ordinary work, may even increase the productive capacity of the worker and increase his output, and may thus help to obtain a maximum of efficiency from the eight-hour day; and

Whereas while giving full weight to the customs prevalent in the different countries and to local circumstances, it may nevertheless be useful to lay down the principles and methods which at the present time seem generally best adapted to secure the best use of periods of spare time, and it may also be instructive to make known for the benefit of all countries what has been done in this direction; and

Whereas the value of this information is particularly great at the moment when the ratification of the Convention on hours of work is being considered by the Members of the International Labour Organization;

The General Conference makes the recommendations hereinafter appearing:—

1. *Preservation of Spare Time.*—Whereas it is agreed that in countries where limitations have been placed on hours of work by law, by collective agreement or otherwise, if all the benefits which may be expected from such measures are to be secured both for the wage-earners and for the community, steps must be taken to ensure that the workers shall have the undiminished enjoyment of the hours of spare time so secured to them as aforesaid; and

Whereas it is important that, on the one hand, the workers should fully appreciate the value of the periods of spare time which have been secured to them and should do their utmost, in all circumstances, to prevent this spare time from being encroached upon, and, on the other hand, that employers should always aim at establishing wages corresponding sufficiently with the needs of the workers to make it unnecessary for them to have recourse during their periods of spare time to additional hours of paid work; and

Whereas prohibitions against the continuance of paid work in their own occupation for the same or another employer, in excess of the legal working day, are recognized as being difficult to enforce, and may even at times, seem to infringe the workers' right of using their periods of spare time as they choose, the Conference nevertheless considers that attention should be drawn to the steps which have been taken in this direction in a number of countries;

The Conference recommends that Governments should encourage and facilitate the conclusion of collective agreements which will ensure a normal standard of living to workers in exchange for the legal hours of work, and which will determine, by voluntary agreement between employers and workers, the measures to be taken to prevent workers from having recourse to additional paid work.

And whereas it is agreed that every facility should be given to the workers to enable them to make the best use of the periods of spare time so secured to them as aforesaid, the Conference recommends:—

(*a*) That each Member, whilst having due regard to the requirements of different industries, local customs, and the varying capacities and habits of the different kinds of workers, should consider the means of so arranging the working day as to make the periods of spare time as continuous as possible;

(*b*) That by means of a well conceived transport system and by affording special facilities in regard to fares and time-tables, workers should be enabled to reduce to the minimum the time spent in travelling between their homes and their work, and that employers' and workers' organizations should be extensively consulted by public transport authorities or private transport undertakings as to the best means of securing such a system.

II. *Spare Time and Social Hygiene.*—Whereas the utilization of the workers' periods of spare time cannot be separated from the general measures adopted by the community for promoting the health and welfare of all classes of society, the Conference, without attempting to examine in detail each of the great welfare problems, the solution of which would contribute to improving the workers' status, recommends to the Members:—

(*a*) The encouragement of individual hygiene by the provision of public baths, swimming pools, etc.;

(*b*) Legislative or private action against the misuse of alcohol, against tuberculosis, venereal disease and gambling.

III. *Housing Policy.*—Whereas it is of advantage to the workers and to the whole community to encourage

everything tending to the harmonious development of the workers' family life; and

Whereas the most effective means of protecting the workers from the aforesaid dangers is to place within their reach a proper home;

The Conference recommends the increase in number, if necessary co-operation with the national or local authorities concerned, of healthy dwellings at low rentals in garden cities or urban communities under proper conditions of health and comfort.

IV. *Institutions for the Utilisation of Spare Time.*—Without attempting to differentiate between the innumerable institutions which afford to the workers opportunities for the free exercise of their personal tastes, the development of which is dependent on the manners and customs of each country or district, the Conference nevertheless draws the attention of the Members to the necessity of avoiding misplaced activities resulting from the establishment of institutions not called for by some well defined need. The Conference desire to emphasize the importanc of taking into account in the establishment and development of these institutions, the desires, the tastes and the special requirements of the workers for whose use they are designed;

At the same time, among the institutions which may both assist full and harmonious development of the individual and of the family, and contribute to the general progress of the community, the Conference recommends those schemes which have for their object:

(*a*) the improvement of the workers' domestic economy and family life (gardens, allotments, poultry keeping, etc.) which combine the benefits of recreation with the feeling that some addition, however slight, is being made to the family resources;

(*b*) the development of the physical health and strength of the workers by means of games and sports which enable young workers who are working under the highly specialized conditions prevalent in modern industry to give free play to their energies in a manner which encourages initiative and the spirit of emulation;

(*c*) the extension of technical, domestic and general education (libraries, reading-rooms, lectures, technical and general courses, etc.) which meets one of the workers' most keenly felt needs and affords the best means of progress to industrial communities;

The Conference further recommends that Members should encourage these forms of activity by the grant of subventions to organizations concerned with the moral, intellectual and physical development of the workers.

V. *Free Use of Institutions and Co-ordination of Local Action.*—Whereas for many years past the workers in the great industrial countries have always sought to ensure that they may live their lives outside the factory or workshop in complete freedom and independence, and they particularly resent any outside interference in their private affairs, and this feeling is so strong as to provoke opposition to any attempts to deal either nationally or internationally with the question of the use of spare time for fear that it may possibly restrain their liberty; and

Whereas the Conference, while expressing appreciation of the motives which have led to the creation of institutions for the encouragement of the wise use of the spare time of the workers, suggests that Members should draw the attention of the promoters of such institutions to the necessity of safeguarding the individual freedom of the workers against any system or scheme which has any tendency towards compelling the workers directly or indirectly to use any particular institution; and

Whereas the most practical and successful institutions are those which have been started and developed by the beneficiaries themselves, the Conference, while recognizing that in many cases where public authorities or employers lend financial or other assistance for the encouragement of allotments, games or educational institutions, and consequently have a legitimate claim to take part in their management, recommends that every care should be taken to avoid any encroachment on the liberty of those for whose use such institutions are intended.

While not contemplating any systematic organization of spare time occupations, but having in mind a number of successful efforts made to assist them, the Conference further recommends that each Member should consider the possibility of promoting the formation of district or local committees, composed of representatives of the public authorities, of employers' and workers' organizations, and of co-operative associations, for co-ordinating and harmonizing the activities of the various institutions providing means of recreation.

The Conference further recommends to the Members that an active and effective propaganda should be undertaken in each country for the purpose of educating opinion in favour of the proper use of the spare time of the workers.

Text of Order in Council

The text of the Order in Council dealing with the above recommendation is as follows:—

P.C. 220

The Committee of the Privy Council have had before them a report, dated 10th February, 1926, from the Minister of Justice, submitting that he has had under consideration, upon reference from the Honourable the Minister of Labour, the proposals set forth in the "Recommendation concerning the development of facilities for the utilization of workers' spare time" which was adopted by the International Labour Conference at its sixth session held at Geneva, 16th June to 5th July, 1924, with a view to determining whether, and to what extent, if any, the subject matter of these different proposals falls within the competence of Parliament or of the provincial legislatures for the enactment of legislation or other action.

The Minister accordingly submits his opinion upon the proposals of the recommendation as follows:—

Under heading "I.—Preservation of Spare Time", the Conference makes three recommendations.

The first recommendation is that the Governments should encourage and facilitate the conclusion of collective agreements which will ensure a normal standard of living to workers in exchange for the legal hours of work, and which will determine, by voluntary agreement between employers and workers, the measures to be taken to prevent workers from having recourse to additional paid work.

This recommendation seems to aim particularly at the establishment of wages corre-

sponding sufficiently with the needs of the workers to ensure them a normal standard of living and to make it unnecessary for them to have recourse during their periods of spare time to additional hours of paid work. The regulation of rates of wages as well as the other conditions of the contracts entered into between employers and employees in the provinces, is a matter which falls primarily and generally within the competence of the provincial legislatures. Parliament may, no doubt, deal with such matters in an ancillary way in legislating in regard to works and undertakings within its exclusive legislative jurisdiction, and the effect of such legislation, if enacted, is that provincial authority in relation to the subject-matter thereof is superseded and remains inoperative so long as the Dominion legislation continues in force. But until Parliament so legislates, the provincial legislatures remain competent to deal with such matters generally and comprehensively.

The recommendation in terms merely bespeaks action on the part of the Governments to encourage and facilitate the conclusion of collective agreements for the purposes specified therein. The Minister does not undertake to say what action, legislative or otherwise, may be taken in furtherance of those objects, but is of opinion, for the reasons stated above, that the matter is properly one for the consideration of the provincial governments and legislatures.

The Minister desires, however, to call attention to the fact that the Dominion Government has already adopted a policy which is designed, in its practical operation, to secure to the employees of contractors with the Dominion Government fair wages and reasonable hours of work. Under the terms of Order in Council of the 7th June, 1922 (P.C. 1206), embracing the "Fair Wages Policy" of the Government, there are required to be inserted in all contracts made on behalf of the Government of Canada for the construction or remodelling of a great variety of works and properties, and also, as far as practicable, in all agreements made by the Government involving the grant of Dominion public funds, as well as in all contracts for the manufacture of government supplies of various descriptions. certain formal clauses which require the contractors to pay the rates of wages generally accepted as current for competent workmen of the various classes required in the district in which the work is to be performed, or if there be no current rates in the district, then fair and reasonable rates, the same to be recognized as the minimum rates of wages payable to the various classes of workmen employed; and also to observe the hours of labour fixed by the customs of the trade in the district, and if there be no such custom, then fair and reasonable hours, the same to be recognized as the maximum hours during which the several classes of workmen employed shall be required to work, except for the protection of life or property or on due cause shown to the satisfaction of the Minister of Labour.

The term "current wages" and the term "hours of labour fixed by the custom of the trade" are defined as meaning, respectively, the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn, or actually prevailing, although not necessarily recognized by signed agreements. In the event of any dispute arising as to the wages or hours to be observed as current or fair and reasonable, the dispute is determined by the Minister of Labour, whose decision is final, and payment may be withheld of any moneys which would otherwise be payable to the contractor until the Minister's decision has been complied with.

The second recommendation is that each member, whilst having due regard to the requirements of different industries, local customs and the varying capacities and habits of the different kinds of workers, should consider the means of so arranging the working day as to make the periods of spare time as continuous as possible. The carrying out of this recommendation involves the regulation of hours of work, and it follows from what has been stated above in regard to the first recommendation, and particularly from the recent decision of the Supreme Court of Canada in the matter of Legislative Jurisdiction over Hours of Labour (1925) C.L.R. 505, that, although legislation upon that subject might be enacted by the Parliament of Canada, in so far as works and undertakings within its exclusive jurisdiction are concerned, legislative jursdiction touching that matter is primarily vested in the provincial legislatures. These legislatures are, consequently, competent to enact legislation on the subject-matter of this recommendation generally and comprehensively for the provinces.

The third recommendation is that by means of a well conceived transport system and by affording special facilities in regard to fares and time-tables, workers should be enabled to reduce to the minimum the time spent in travelling between their homes and their work. and that employers' and workers' organizations should be extensively consulted by public transport authorities or private transport un-

dertakings as to the best means of securing such a system. This recommendation does not appear to call for any legislative action. It will be fully implemented if it be brought by the Dominion Government to the attention of the Dominion railways and by the provincial governments to the attention of the provincial railways.

Under the heading "II.—Spare Time and Social Hygiene", the Conference recommends:—

(*a*) the encouragement of individual hygiene by the provision of public baths, swimming pools, etc., and

(*b*) legislative or private action against the misuse of alcohol, against tuberculosis, venereal disease and gambling.

As to (*a*): The Minister is of the opinion that this matter falls exclusively within the jurisdictional sphere of the provincial governments and municipal authorities. He is aware, however, that action has already been taken in the larger communities throughout the provinces along the lines of this recommendation.

As to (*b*)

Misuse of Alcohol.—It is assumed that reference is made to the evil popularly known as the drink evil. There is in force in Canada legislation for the suppression of the liquor traffic. It is the Canada Temperance Act, R.S.C. chap. 152. The general principle and object of the Act are the prohibition of the sale of intoxicating liquors within municipal divisions to be applied by the exercise of local option. The constitutional validity of the legislation embodied in this statute has been upheld by the Privy Council. (Russell v. Reg., 7 A. C. 829, and The Prohibition Case (1896) A. C. 348). But it has been made clear by subsequent and recent decisions of the Judicial Committee that the validity of this legislation is to be taken as resting upon the existence of exceptional conditions, considered to have been established at its date, which constituted a menace to the national life of the country, rather than upon general law. And it is to be now taken as established, that, under normal conditions, the regulation of the liquor traffic within the provinces falls within the competence of the respective provincial legislatures, except with regard to the importation or exportation of intoxicating liquors into or from Canada or any province thereof. These matters are, in the opinion of the Minister, subject to regulation by Parliament alone (Atty.-Gen. for Ontario v. Atty.-Gen. for the Dominion (1896) A.C. 348, 368, 371, answers to Questions 3 and 4; Gold Seal Limited v. Dominion Express Co. and Atty.-Gen. for Alberta (1921) 62 S.C.R. 424; Hudson's Bay Co. v. Heffernan (1917) 3 W.W.R. 167); and upon that view rests the validity of the legislation contained in Part IV of the Canada Temperance Act, as enacted by chap. 8 of the Statutes of 1919 (2nd sess.) and amended by chap. 11 of 1922 and later Acts (Gold Seal Limited v. Dominion Express Co. and Atty.-Gen. for Alberta, ib. supra). The latter legislation provides machinery for the prohibition of the importation of intoxicating liquors into any province in which there is in force a law preventing the sale of intoxicating liquors for beverage purposes, if a majority of the electors of such province vote in favour of such prohibition; and provision is made for prohibiting, upon the request of the Lieutenant Governor in Council of any province with respect to which the importation of intoxicating liquors into the province has been prohibited and such prohibition is still in force, the keeping of intoxicating liquors in such province for export and the exportation of such liquors therefrom.

Tuberculosis.—The Minister is of opinion that, so far as legislative action may be necessary for the eradication and prevention of this disease, the matter is one which engages the exercise of the powers of the provincial legislatures in relation particularly to "The establishment, maintenance, and management of hospitals, asylums, charities and eleemosynary institutions in and for the province, other than marine hospitals" (sec. 92, ss. 7, B.N.A. Act, 1867). "Property and Civil Rights in the Province" (sec. 92, ss. 13), and "Generally all Matters of a merely local or private Nature in the Province" (sec. 92, ss. 16). In accordance with this view, several of the provinces, notably Quebec, Nova Scotia, New Brunswick, Manitoba, British Columbia and Saskatchewan, have established sanatoria for the treatment of tuberculosis. These institutions are managed and operated by commissions created by the respective provincial legislatures. In the various provinces, there, moreover, exist voluntary organizations for the prevention and treatment of tuberculosis, and in Ontario all the sanatoria are operated by such organizations. These organizations carry on an active campaign and are generously supported by the different provincial governments. The work of these different local organizations is co-ordinated and strongly supported by a national organization, in which they are all represented, namely, the Canadian Tuberculosis Association. This association has been in existence for the past twenty-five years; on its executive are represented every institution in Canada operated for the prevention and treatment of tuberculosis, the different provincial boards of health, and some of the larger cities. It receives from the

Dominion Government an annual grant of $15,000. Besides supporting the work of this association, the Dominion Government, through the Department of Soldiers' Civil Re-establishment, has established and operates a number of sanitoria at different points throughout the Dominion for the treatment of former members of the military forces suffering from tuberculosis attributable to or aggravated by service during the war; and under the Department of Agriculture (Health of Animals Branch), progressive measures have been devised, and are being carried out, for the control and eradication throughout the Dominion of bovine tuberculosis. The Department has four different plans, none of which is yet compulsory, under which its work is carried on. Under several of these plans, compensation is paid to the owners of cattle which are slaughtered on account of being tubercular, and a sum varying between one-half a million and a million dollars is annually expended by the Government in this manner.

Venereal diseases.—Under the provisions of the Criminal Code, it is an indictable offence, punishable by two years' imprisonment, for any person knowingly, without lawful justification or excuse, to offer for sale, advertise for sale or disposal any means or instructions, medicine, drug or article for curing venereal diseases or diseases of the generative organs. (sec. 207). Moreover, any person who is suffering from venereal diseases in a communicable form, who knowingly or by culpable negligence communicates such venereal disease to any other person, is guilty of an offence punishable upon summary conviction by fine or imprisonment, or both, (sec. 316A).

In addition to dealing with veneral disease in these criminal phases, Parliament could, no doubt, competently enact sanitary regulations, directed against the communication of venereal disease, with respect to works and undertakings within its exclusive legislative authority, but the matter is one which may generally and comprehensively be dealt with by the provincial legislatures. The Dominion, however, plays an important part in the social measures which are being taken against this disease. Parliament makes an annual appropriation of a sum varying between $150,000 and $200,000 which is divided *pro rata,* according to population, between the different provinces for the treatment of venereal diseases at free clinics established by the provinces. It is a condition of the grant that each province shall provide, for the same purpose, a sum of money equal to the amount of its share of the Dominion grant. In addition to these measures, strong propaganda against venereal disease is carried on by a voluntary national organization. The Social Hygiene Council of Canada, and its various subsidiary provincial organizations. The Council receives from the Dominion an annual grant of $15,000 in aid of its work.

Gambling.—There are various provisions in the Criminal Code which are aimed at the suppression of gambling or betting in one form or another (sections 226, 227 and 228, *re* common gaming houses and common betting houses; sections 231, 232, 233, *re* gaming in stocks or merchandise; sec. 234 *re* gambling in any public conveyance; sec. 235, *re* betting, pool selling, bookmaking, etc., and sec. 236, *re* lottery schemes, disposal of goods by gaming, staking money on gambling devices, etc.). The Minister is of opinion that, in its other phases, gambling is a subject proper to be dealt with by the different provincial legislatures.

Under heading "III.—Housing Policy", the Conference recommends the increase in number, if necessary in co-operation with the national or local authorities concerned, of health dwellings at low rentals in garden cities or urban communities, under proper conditions of health and comfort.

The Minister is of opinion that the provision of houses, so far as it may be regarded as a public duty, is—with respect at all events to the parts of Canada included within the provinces—essentially a matter of a local and private nature in each province, and, accordingly, within the jurisdiction of the provincial legislatures. The object of the recommendation is, nevertheless, one which may be promoted by voluntary schemes based upon a system of government subventions or loans. In 1918, as the result of a conference which was held at Ottawa between members of the provincial and Dominion governments, the Dominion Government decided to aid the several provinces, by means of loans, in carrying out a general housing scheme. The sum of $25,000,000 was, accordingly, authorized to be expended by way of loans to the provinces for the purpose mentioned, on terms of repayment over a period of twenty years, with interest at the rate of 5 per cent per annum. A committee of the Privy Council of Canada was constituted a Housing Committee with power to formulate the general principles to be followed in housing schemes and the details of the project were set forth in Order in Council of the 20th February, 1919, (P.C. 374). The general objects of the project, as stated in this Order in Council, were,—

(*a*) to promote the erection of dwelling houses of modern character to relieve congestion of population in cities and towns;

(*b*) to put within the reach of all working men, particularly returned soldiers, the opportunity of acquiring their own homes at actual cost of the building and land acquired at a fair value, thus eliminating the profits of the speculator; and

(*c*) to contribute to the general health and well-being of the community by encouraging suitable town planning and housing schemes.

Under the conditions of the loan, each province desiring to share in it was required to prepare and submit, for the approval of the Dominion Government, a general housing scheme setting forth the standards and conditions to be complied with in local housing schemes; the general scheme for a province having been so approved, the provincial government exercised entire jurisdiction in respect of local schemes. It was contemplated that the provincial governments should make advances, for the purchase of lands and the building of houses, to municipalities, housing societies or companies with limited dividends, and individual owners of land. Special legislation providing for housing schemes and the acceptance of the loan was subsequently enacted by the legislatures in eight of the nine provinces in Canada. The amount of the federal loan actually borowed as of March 31, 1924, was $23,508,189.62, and the total number of houses erected under the scheme 6,244.

Under heading "IV.—Institutions for the Utilization of Workers' Spare Time", and heading "V.—Free Use of Institutions and Co-ordination of Local Action", the Conference makes several recommendations of a general nature. They all relate to institutions or schemes of a purely local or municipal character in the several provinces, and in the opinion of the Minister ought, acordingly, to be submitted to the consideration of the several provincial governments, and under them, of municipal authorities in each province. It may be observed, however, in connection with one of these recommendations, viz., that relating to the extension of technical, domestic and general education, that, although the subject is exclusively within provincial legislative jurisdiction, the Parliament of Canada made provision by chap. 73 of the Statutes of 1919 (1st sess.), entitled "The Technical Education Act", for the promotion of vocational, technical or industrial education throughout Canada. For the purpose of assisting the provinces in promoting such education, the Act authorized the distribution to the provincial governments, under specified conditions, of sums of money aggregating ten million dollars, divided into annual amounts covering a period of ten years. The principal condition of the annual grant was that it should not exceed an amount equivalent to that which the provincial government should expend on technical education within such year. All of the provincial governments have taken advantage of the provisions of the Act and share in the fund, the moneys being used to develop new courses of study which will meet the needs of workers in all phases of manufacturing, commercial and home-making life. Agriculture is not included, because special provision for this work exists under the Agricultural Instruction Act, chap. 5 of the Statutes of Canada, 1913.

The Minister recomends that a copy hereof, together with an authenticated copy of the draft recommendation, be transmitted to the Lieutenant Governors of the respective provinces, for the consideration of their respective governments, with a view to such legislative or other action in line with the proposals of the draft recommendation as are within the provincial sphere, as each Government may be advised to take.

The Committee concur in the foregoing and submit the same for Your Excelency's approval.

E. J. LEMAIRE,
Clerk of the Privy Council.

Sir Henry Thornton, president of the Canadian National Railways, at a meeting of the Taylor Society at New York in February, described co-operative management in the railroad industry as economically a step forward which had been found by railroads adopting it to be profitable to investors, workers and the public. He laid stress on the importance of loyalty among employees, and stated that the union management co-operation put into effect in the shops of the Canadian National Railways had resulted in better relations with workers. It had promoted continuity of employment, which, he said, is one of the greatest factors in preventing industrial unrest. Other speakers at the same meeting were Bert M. Jewell, president of the Railway Employees' Department, American Federation of Labour, and O. S. Beyer, Jr., the originator of the "Baltimore and Ohio plan."

In connection with the heavy snow fall in February the Halifax City Council revived a former custom of employing convict labour for street cleaning. The use of prison labour for public services was common at one time but was discontinued owing to strong public opinion against it. Traffic was suspended in some parts of Halifax owing to the depth of the snow.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

THE notes in this section of the Labour Gazette relate to the work carried on by secondary vocational schools which receive federal grants under the provisions of the Dominion Technical Education Act. Other activities which have a direct bearing on the training of apprentices and industrial workers are also noted. The Dominion Government, through annual grants administered by the Technical Education Branch of the Department of Labour, assists the provinces in developing all forms of vocational education and industrial training which are of benefit to workers in various branches of industrial, commercial and home-making activities.

Importance of Technical Education in Schools

In his annual report for 1925, Mr. J. P. Labarre, Director-Secretary of the Northern District Catholic School Board in Montreal, makes the following statements regarding the value and need for vocational instruction in boys' schools.

"Courses in manual work are just as necessary to most of our children as the matters included in the regular program of studies. The intelligent and trained workman who understands a plan always executes it more perfectly and economically than the one who acts without that knowledge, and mechanically. A manual trade enables the one who knows it perfectly to find work at any time and place. It protects him against need." In Germany, France, England and the United States, technical education in the schools is highly appreciated and in great favour.

"What is done elsewhere must be taken into account, in order not to remain backward. Here is an economic question which calls for an earnest and immediate consideration. Our children can never acquire too much power of observation and initiative. They will develop it through manual work more than in any other way. They need a general technical knowledge. Manual instruction will give it to them, in part at least. The attendance at the provincial technical school shows that industrial knowledge is not sufficiently sought after by our French-Canadian compatriots. More than 60 per cent of students registered at the technical school are from a nationality other than our own.

"Teaching manual work has indeed made some progress here. In this district, five classes in manual work are open to boys in the St. Paul, St. Louis, St. Rosaire, Christophe-Colomb and Champagnat academies One thousand six hundred and fifty-five boys from the fifth year to the eighth year, inclusive, attend the courses during one hour and a half each week. Manual work students are recruited not only in the school where such classes are found, but also among the pupils of the neighbouring schools, in such numbers as class hours will permit.

"Before executing a piece of work, the student sketches it on paper under the direction of his teacher. He thus learns how to read and prepare a plan, an accomplishment which is indispensable to a good workman. This is because the teachers are not only competent wood-workers but they also are draughtsmen and good school masters. The results they obtain are really marvellous. You see it every year when you visit the exposition of manual work in each of these schools. It is desirable that at least one such class should exist in each of our boys' schools."

Technical School at Sault Ste. Marie, Ont.

In his annual report for 1925 Principal A. D. Hone, of the Sault Ste. Marie Technical School makes the following statements regarding the nature and scope of the work being carried on in the school.

"Last year was the most successful year in the history of the school, both from the standpoint of numbers and work accomplished. Last midsummer the first graduating class which was wholly prepared within the school entered upon the larger duties of life, and a number of them have obtained good positions here and elsewhere, and they are proving a credit to the training they received in this school.

"The enrolment of the day school shows an increase of over 30 per cent and the night school in corresponding proportion.

"A new department, electricity, was added to the practical course offered by the school. This department is making satisfactory progress, and we hope that with the addition of the necessary equipment, provided for in the estimates, it will be a great asset to the community.

"The number of students enrolled in the school, in proportion to the population, is extremely gratifying and compares favourably with that of any other city in Ontario. In spite of the relatively large number already enrolled, a continued increase is anticipated. Those who have made an expert study of the needs of the boys and girls of to-day estimate that the vocational type of education is most

suitable for at least 75 per cent, so there is considerable room for expansion yet before the percentage is reached.

"The courses offered by the school are all designed to give a good general academic education combined with a thorough training in a number of activities fundamental to the industries and business pursuits. While this training does lead directly into a number of trades and callings, it is intended to give a general training along technical and business lines rather than intensive instruction in any one trade or pursuit. If the public realized this more generally, it would remove considerable criticism, as many to-day expect the graduates of a technical school to be experts in some particular trade. The Department of Education, after careful investigation, deliberately chose to establish schools of the type of the one at Sault Ste. Marie rather than trade schools such as existed in some other countries. The idea is that a student who has received such a general training will be able to learn a specific trade in a much shorter time than one who has not been so trained, and will ultimately, through his wide knowledge of operations connected with his own trade and the related mathematics, science and so forth, be a much more valuable and expert tradesman, and because of the general education, a much more valuable citizen than one who received a narrow trade education only.

"The courses given in the school are as follows: First, the general preparatory course, which is open to boys and girls with fourth book standing. This is a one-year course and is designed for those who have shown in the public school that they are not particularly book-minded, and for those who feel that they are more suited to industrial pursuits than to academic studies. It serves as a preparation for the more advanced courses of the school and at the same time gives a training in a variety of intelligent subjects, such as enables the student to make an intelligent choice of the course for which he or she is best adapted. Entrance certificates are granted to those who show that they are capable of doing commercial work and are desirous of entering the commercial course.

"Second, the general technical course for boys. This is a three-year course and is open to students promoted from the preparatory course or of entrance standing. It is designed to prepare students for directive positions in the industries. In the third year students are allowed to specialize along some practical line for which they have shown special aptitude.

"Third, the home economics course for girls. This is open to girls of the same standing as the boys in the above course. It is also a three-year course and is designed to prepare girls for the home-making activities and such occupations as dressmaking, millinery, dietetics and nursing.

"Fourth, the commercial course. This course is open to students of high school entrance standing and combines a thorough general academic education with an intensive training in stenography, typewriting, bookkeeping, and general business pursuits. It is designed not only to prepare for office positions but also to give a general training to those who may wish to enter business in any capacity.

"While the school is not a trade school, there are a number of trades for which the courses provided make direct preparation. It is proposed to make an effort to guide students into some specific vocation, at least two or three months before they have to leave the school, and then to permit them to spend the remaining time in the special course which will best fit them for this vocation. In this way, every student who leaves the school will have received some special training for a definite vocation.

"This year a determined effort will be made to link up the school with the industries of the city. The Principal will visit the various industries to endeavour to find out how the day or night school may be made to serve the needs of these industries to greater extent than at present. We shall also endeavour to find in these industries a market for the product of the school, that is, employment for our graduates. In this connection it is proposed to establish an employment bureau in the school. A questionnaire will be sent out to the various employers and business men, in order to determine the nature of the employment, the number of the employees and the probable chances of obtaining employment both now and during normal times. Our aim will be to bring about such a condition that employers will come to the school when they need young men or women in any capacity.

Bridging the Gap from School to Industry

The following extracts are taken from an article by R. W. Tarbell, of Milwaukee, Wisconsin, appearing in The Industrial Arts Magazine of March, 1926.

One of the major responsibilities of society is to prepare youth for adult activities. This has been a concern among primitive and savage peoples, frequently being as important as the hunt for food itself. No group of people can afford to shirk the job of educating its young folks, for civilization will advance only in proportion to the adequacy with which the

oncoming generation is ready to cope with the problems of life as they arise. Primitive peoples built up their educational system around the central idea of making the learner proficient in given pursuits. It might be shooting the arrow, building a hut, or catching fish, but the training was given for a specific purpose. This same principle can be applied to our own time. If the children of to-day are to be equipped to solve the problems of tomorrow, their combined educational experiences must fit them for the job. School teachers are the special agents designated by society to assist in this task.

Our social organization is so developed at present that most people work with others in some industrial or business enterprise. The training problem becomes one of preparing people for a place in this modern world of work. If our schools are going to prepare pupils for the activities of adult life, specific things must be taught and certain people are to do it. It is the special function of the vocational school to give assistance to pupils in connection with their industrial activities. This means that the instruction should coordinate with the busy world of work. In this expanding field of education the vocational teacher is a large factor. There are many things for him to understand.

The following discussion is an attempt to indicate how pupils may be prepared for work. Some of the statements may seem theoretical, but they are suggestive of what may be done practically.

(a) *Courses in occupational information.*—Schools are taking a forward step in the matter of placement and employment by including occupational studies in the curriculum. The practice has extended far enough already to prove its usefulness. There are several very good texts on the market, suitable for elementary, secondary, or vocational schools. Studies in the occupations will furnish a running view of the nature of the different fields of work and assist pupils in the choice of a job. This will also place considerable material in the teacher's hands to assist him in his counselling and advisory activities. The pupil's perspective of life outside the classroom is materially enhanced and his ability to pick a job much improved.

(b) *Visits to Industries.*—Many teachers are taking advantage of opportunities offered by industries to visit factories and shops with their students. This has been the practice of classes in the engineering schools for some time. In recent years it has extended to many public schools, and offers an exceptionally interesting method of gaining occupational information, especially in the industrial centers. It is an excellent way to put pupils in touch with actual work conditions, and will assist them greatly in the matter of selection.

(c) *Talks by local citizens.*—School people should not suffer under the illusion that all the teaching is done by them. Other means are available and should be utilized. There are public-spirited men in practically every community who can bring interesting messages to school children. They can be drafted from the various walks of life to tell the story of work. By planning a careful program these talks by local citizens can become an effectual part of the course. Much useful information will be given to the pupils, and the speakers will understand and support the schools more earnestly. Such an arrangement should tie up definitely with the teacher's efforts to give practical occupational information.

(d) *The school employment office.*—Another means for aiding pupils in the matter of placement is the school employment office. This is a simple innovation in the school organization and need not be costly beyond what the needs seem to warrant. In a large school the duties may require considerable time and this will taper down to a small amount of work in villages. The essential thing is that someone in the organization is in charge of the work and has the information. This individual makes contacts with the industries and gives personal help to pupils. It is one of the very practical ways of caring for the placement proposition.

(e) *Conferences with parents.*—Parents should be consulted when the question of securing employment arises. This means work, but should bring better results. The information that teachers are able to gather is sometimes too theoretical and needs to be balanced by some of the personal and practical views of parents. It is true that parents' ideas may not always be for the best interests of the child, in which case the instructor has the added job of teaching parents, also. This is part of the work of the school in these days when our conception of the school is expanding until we see it as a system of universal service in education. The results of such conferences are most likely to be a better understanding, a more satisfactory selection of employment and more loyal school patrons.

The Relation of Technical Education to Industry in Great Britain

The following extract from the London *Times* for January 4, 1926, indicates the

interest and opinions concerning the problem of linking up schools with industry in Great Britain.

The relation of technical education to other forms of education and to industry was considered at a recent conference. Dr. T. Percy Nunn, Professor of Education, University of London, presided.

Dr. H. Schofield, Principal of the Technical College, Loughborough, said that the present regulations governing technical education were out of date, and badly needed revision. Since they were issued in 1915 the outlook in this branch of education had fundamentally changed. Apprenticeship had decayed, and large parts of industry had been reorganized on a mass production basis, tending to the elimination of the more all-round and more informed workmen. Among other changes had been the development of our secondary school system. There was, in the view of many, abundant reasons why the Government should conduct an inquiry into the question. The answer given to that request was worthy of careful consideration. The importance of the points raised was recognized, but it was asked what industry had to say. Little direct evidence could be produced that industry was vitally interested in the problem, even sufficiently to urge that an inquiry might be of value. Nevertheless, he felt convinced, from his own relations with industry, that at present industry really was interested, though this interest had found little external expression. In any case, he did not subscribe to the idea that until industry did express itself in such a way those who mainly represented education should do nothing. He thought that when carefully canvassed industry would prove sympathetic towards forms of further education for those connected with it. This education would fall into two classes. First there was education of a recreative character, which would be a relief from the work of the day and which it was to the advantage even of industry itself to encourage. The second form of training was vocational. He urged that those who provided technical education should get into touch with local firms, and suggested the formation of advisory committees. They wanted a real partnership betwen the technical college and the works.

Dr. H. Costley-White, headmaster of Westminster School said that in considering education they had to regard boys and girls not merely as useful hands in commerce, but as human beings. Up to at least the age of 14 education ought not to have regard to the future commercial value of the individual, but should be of the kind which would advance his personal profit and development—a general feeding of the mind. If after 14 attention was to be turned to the walk to which a boy was going to be called, the contribution which secondary schools should make was, he thought, on the theoretical side, such as teaching chemistry, botany, and other subjects, as a preparation for agriculture.

Miss E. M. Fox, headmistress of Beckenham County School for Girls, contended that technical education was a necessary preliminary to any career in industry. Where such instruction could be made a factor of real educational value, by being grounded on basic principles, it might well be given during the ordinary school course. This experiment was tried with conspicuous success by Sanderson, of Oundle. His root idea, as an educator, was to connect the school at every point with the life of industry, and to teach every subject not by class-room instruction as much as by workshop methods. When the instruction was of too specialized a nature the heads of schools should ensure the passing on of boys to the local technical school or college, which should work in vital co-operation with the schools and with the labour market. Such instruction in the principles under-lying technical skill, would, it was claimed, send better equipped workers into their different occupations, and so gradually raise the whole status and dignity of industry.

Mr. C. L. Bryant, an assistant master at Harrow School, said that the suspicion in which technical instruction and all vocational teaching were held was well founded. They would not get the best craftsmen by teaching them only their craft. It was equally true that if they persistently taught a child only those things which had no connection with his immediate interests they would engender distrust and dislike of all learning. The chief aim in providing instruction in secondary schools should be to assist in that vague but real thing, a general education. To this end, handcraft was of great value for the normal child; while for the abnormal, those for whom an education of a predominantly literary type was a proved failure, it was a potent means of salvation. There was a national as well as an individual interest to be served by the teaching of handcraft. Much of their social unrest, as Ruskin foresaw, was due to the separation of the thinkers from the doers. Distrust between these classes and a feeling of the inferiority of labour, even among the labourers themselves, were all too prevalent. Manual instruction could do much to restore the sense of the dignity of labour, on which the happines of all must rest. It was not without reason that the life of a carpenter was chosen for the Great Teacher of mankind.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Canadian National Safety League

The seventh annual report of the Canadian National Safety League covers the work of the year 1925. It may be noted that the sum of $10,000 was granted by the Dominion Government for the furtherance of the work of the League during the past year. The general campaign for 1925 consisted partly of the distribution throughout Canada, of 125,000 bulletins dealing with aquatic, traffic, industrial, public and home hazards. Nineteen thousand special bulletins, and fourteen thousand hunters' bulletins, together with some twenty thousand Safety Calendars, were distributed all over the Dominion.

With regard to unsafe firearms, s special letter was written by the President, Sir John Gibson, to the Right Honourable W. L. Mackenzie King, Prime Minister, relative to some 30,000 imported rifles that could be accidentally discharged a number of ways without touching the trigger, with the result that through the assistance of the Minister of Labour, the Customs Department and Colonels Starnes and Matthews, the latter in charge of the North-West Mounted Police, and the Department of Militia and Defence, a departmental committee was appointed to deal with the subject. Their conclusions were that the Customs Department does not admit any dangerous firearms, and if there is any doubt as to firearms submitted for entry, the matter is to be referred to a committee of experts.

While the League is concerned with public safety in general, it has also a special interest in industrial safety and co-operates with the Workmen's Compensation Boards and other public bodies which further the safety of employees. In this connection the following tribute to the Provincial Board was paid by an Ontario speaker at the annual meeting of the League:—

"Under the Ontario Government, the Workmen's Compensation Board is encouraging all industrial activity to take every care possible for the protection of the human body; in placing a premium on industry that applies all safety devices, that encourages and instructs its employees to use care in every activity. The Board is, I think, meeting with success along this line, and is commended for this work of stepping establishments up into a preferred class where their history with regard to accidents shows they are getting results by their education and the general campaigns they are carrying on in their industry."

The following account of the subsidiary provincial leagues is given in the report:—

Ontario Safety League.—This league has now completed the twelfth year of its existence. During 1925, as for a number of years previously, the league distributed over a million pieces of literature to school children, motorists, street carmen, manufacturers and others, relative to the prevention of accidents. The usual number of motion pictures, lantern slides or other publications were circulated, and safety tables were given all over Ontario to schools, summer camps, Boards of Trade, industrial workers and the general public. In addition safety bulletins were distributed in more than six hundred cities, towns and villages throughout the province, and in railway stations, street cars, garages and public places, posters and signs were erected dealing with the traffic hazard. In addition to the above $300 in cash prizes was awarded in the school essay contest, and $320 in cash prizes in the school cartoon contest.

The results of these activities may be traced, it is thought, in a reduction by 67 in the number of fatal accidents in the province in 1925 as compared with 1924. The report contains a table showing the number of fatal and non-fatal accidents in the province in these two years, distributed according to causes The largest group of fatalities was from drowning, which caused 307 deaths in each of the two years. Automobiles came next, with 254 fatalities in 1924, and 298 in 1925; falls caused 170 deaths in 1924, and 146 in 1925; railroads caused 115 deaths in 1924 and 79 in 1925. These numbers, it may be repeated, do not represent industrial, but general accidents.

Province of Quebec Safety League.—Through a drive for funds during 1925, the Province of Quebec Safety League has become self-supporting, and is now carrying on accident prevention work with an executive located in the Mount Royal Hotel, Montreal. The league is conducting a campaign of safety among the public, in the schools, and throughout the industries, and comparative results between 1924 and 1925 show a remarkable decrease in accidents from all causes. The response for funds and these results are sufficient warrants for the existence of the Province of Quebec Safety League. The president for 1926 is Mr. E. J. l'Esperance, and the general manager and secretary is Mr. Arthur Gaboury.

Maritime Safety League.—The Maritime Safety League, organized to operate in the Provinces of New Brunswick, Nova Scotia and Prince Edward Island, is receiving from the Canadian National Safety League the necessary financial assistance to continue operations

until such time as they may become self-supporting. Its president is Mr. A. T. Weldon, of Moncton, N.B.

Manitoba Safety League.—The Manitoba Safety League, organized in 1920, and re-organized early in 1925, is still in the preliminary stages. The work is being conducted at the present time by Mr. Charles F. Roland, Secretary of the Employers' Association of Manitoba, as acting secretary, with a tentative executive committee. The Manitoba Safety League expects with the financial assistance of the parent organization, to increase their activities during 1926.

It is anticipated that a safety league will soon be organized for British Columbia, and the report concludes as follows:—

"It would be a mistake to neglect the preliminary organization and perfection of Safety Leagues in all or any of the Provinces of Canada. These leagues must be financed ultimately within their own provincial bounds and the sooner this work is done, the greater will be the returns in lives saved. Later, when our provincial populations have increased, it is going to be infinitely more difficult to control the accident frequency from all causes and hazards. It must not be forgotten that a fatality prevented represents a minimum economic saving of at least $5,000. The Finance Commissioner of Toronto says: "Every time a useful or potential citizen is maimed or killed, a great economic waste is involved."

Major-General Sir John M. Gibson of Hamilton, is president of both the Canadian and the Ontario Safety Leagues. The general manager of the former organization is Mr. J. F. Wyse, Toronto, and the honorary secretary of the Ontario League is Mr. R. B. Morley, of Toronto.

Industrial Safety Committee in Quebec

An Industrial Safety Committee for the district of Montreal has been organized under the auspices of the Quebec Safety League, to be followed by a safety campaign in factories and industrial plants for the prevention of accidents. The organization meeting on February 9 was representative of many industrial concerns in the district, and by Mr. John T. Foster, president of the Montreal Trades and Labour Council, and others. Among the proposed measures to be taken in the promotion of safety mention was made of first aid contests with awards for competency, and the keeping of fuller statistics as to the frequency and severity of accidents and as to time lost through accidents, the office of the Safety League to be used as a clearing house for such information. It was stated that the League would co-operate with an employer in safety work.

In connection with this inaugural meeting the following figures were given out by the League: The Aluminum Company of Canada is decreasing its frequency rate or million working hours by 41.86; reduced the severity rate or percentage of days lost per 1,000 hours of work by 1.9; the Belgo Paper Company's figures show 19.7 reduction in the frequency rate and 1.4 in the severity rate; the Electric Service Company reports corresponding reductions of 22.5 and 1.4; the Canada Carbide Company 47, and 13.86; and the Shawinigan Water and Power Company 17.6 and 16.78.

Laurentide Company Wins Competition

The judge's findings in the safety competition between the Sault Ste. Marie mill of the Spanish River Pulp and Paper Company and the Laurentide Company, Limited, are given below. This competition was announced in the issue of the LABOUR GAZETTE for August, 1925 (page 794), where it was stated that the two companies had entered into a friendly competition to reduce the frequency and severity of industrial accidents to a minimum. The competition was held under the auspices of the Ontario Pulp and Paper Makers' Safety Association, which named as judge Mr. A. P. Costigane, of Toronto, the secretary and engineer of the association. The competition extended over two quarterly periods, the results being stated by Mr. Costigane as follows:—

—	1st Period July 1-Sept. 30		2nd Period Oct. 1-Dec. 31	
	Laurentide Company	Spanish River Company	Laurentide Company	Spanish River Company
Number of working days	74	76	83·25	78
Total hours worked	700,515	479,306	728,622	490,307
Number of full time workers	947	631	876	629
Number of lost time accidents	6	12	10	18
Total days lost	87	103	127	255
Days lost per full time worker	·091	·163	·145	·405

"The above figures show the Laurentide Company won both competitions, and I have pleasure in hereby awarding that company the contest in both instances.

"An analysis of the above figures shows that the Laurentide Company could in the first contest have incurred lost time up to 154 days without losing the contest. During the second period, this company could have incurred lost time up to 354 days without losing.

"It has been a great pleasure to act as judge in these contests, and I have pleasure in congratulating the employees of both com-

panies on the sportsmanship shown throughout the contests; and I hope these contests will be the forerunners of many such in Canada."

Principal Industrial Diseases

Sir Kenneth Goadby, one of the specialist medical referees under the British Workmen's Compensation Act, in a recent address on "Disease and the Workmen's Compensation Act," mentioned some of the chief industrial diseases for which compensation is given.

The incidence of disease among miners had been largely due to miner's nystagmus, a condition and affection of the eyes. A committee recently investigated the causes, and a considerable amount of attention had been given to elucidate the causes from which this disease arose, and it was confidently hoped in the very near future that a great amelioration would take place in the incidence of the disease. The numbers of new cases had already begun to drop considerably, but the industry was still fettered with numerous cases which occurred before the application of methods of prevention had come into force.

Included in miners' diseases were the affections known as "beat hand," "beat knee," "beat elbow" and "beat wrist." The disease was one due, he said, to neglect of small and early abrasions and injuries. The ambulance and first-aid regulations introduced into factories some time ago had been extended to the mines, and he was hopeful that the incidence of this disease would show diminution in the near future.

Turning to the other disease which made up the bulk of the compensation cases of industrial disease, they found dermatitis showed a rise from 1919 of 270 to 709 cases. Lead poisoning cases had gone up from 231 in 1919 to 1,516 in 1924, but the fatality of the disease had diminished. The fatal cases in 1920 were 18 in a total of 265, while in 1924 the total was 18 for 564 cases—a diminution in four years of at least half the death-rate. As a large number of these fatal cases were of old-standing illness and long-continued exposure before even the simple facts of general hygiene had been brought home to the workers, the death-rate was likely to undergo a further diminution.

An experiment is being carried out in the schools at Peterborough, Ontario, in teaching children how to prevent accidents from the use of electrical appliances. This action is being taken on the initiative of the Committee on Accident Prevention and Health Promotion of the Hydro-Electric Power Commission of Ontario. This committee is doing valuable work in providing instruction at various points through the province, especially in the smaller municipalities, in the use of "Safety First" electrical equipment, and in demonstrating methods of resuscitation.

Worker's Risk in Ontario

The average worker in industry in Ontario has an ordinary chance of working for ten years with one accident that is sufficiently serious to warrant it being reported to the Workmen's Compensation Board. In normal times there are nearly 450,000 employees under compensation in the Province and in the past eleven years there have been 502,014 accidents reported to the Board, indicating an average slightly in excess of one report for every ten workers per annum. In the same eleven years there were 4,328 fatalities under compensation, which represents an average of more than one death per day in that period. One very encouraging feature of the reports of the Workmen's Compensation Board covering the year 1925 is that the death cases in that year showed a decrease of fifty-seven from 1924, there having been 402 death cases in 1924 and 345 in 1925.

Safer Railway Operation

Mr. Arthur Williams, president of the American Museum of Safety, states that railways were twice as safe in 1924 as they were in 1914 before organized safety work was begun. In 1914 one passenger was killed for every 6,620,000 locomotive miles of operation, and one injured for every 116,000 such miles. In 1924 one passenger was killed in 11,250,000 locomotive miles, and one passenger was injured for every 287,000 miles.

Practically the same progress was reported in the safety of railroad employees. In 1917 one railroad employee was killed in an industrial railroad accident for every 9,120,000 man-hours of work, and in 1924 one employee was killed for every 15,550,000 man-hours of work. As for injuries, in 1917 one employee was injured for every 28,000 man-hours of work, and in 1924 one employee was injured for every 48,000 man-hours of work.

Report of Explosives Division of Department of Mines

The report of the Department of Mines for the fiscal year ending March 31, 1925, includes a report of the Explosives Division. It is stated that the care taken by the managements of the several factories in the enforcement of the rules for the safe conduct of operations, the attention given by superintendents and their assistants to the inspection of equipment and to the potential dangers of the processes followed, and the intelligent cultivation of good practice on the part of em-

ployees, so that such becomes habitual, have happily combined to the benefit of all.

The report calls special attention to the dangers arising from small quantities of explosives being left exposed by working parties. In some cases these have been found and removed by the police, but unfortunately a considerable percentage of the accidents to juveniles arises from playing with discarded explosives which they pick up. Three cases were reported of large quantities of explosives having been abandoned several years previously, much of which was in a very sensitive condition. Approximately 2,500 pounds were left by a mining party in the bush, over 17,000 pounds in the magazine of a disused mine, and 900 pounds, the remainder of a stock abandoned in a quarry, were collected from farmers and others.

"Accidents from use of explosives and from miscellaneous causes were slightly fewer than in the previous year. Information was obtained of fifty in mines and quarries, killing fifteen and injuring forty-seven persons, and seventy-nine elsewhere, killing seventeen and injuring seventy-five. Again, attention is to be called to the high proportion resulting from playing with explosives. Of the seventy-nine accidents elsewhere than in mines, thirty-nine were brought about in this way, causing the death of four persons, and injury to thirty-nine. With one or two exceptions the victims are children and their injuries in many cases serious—as the loss of several fingers, or a hand, or an eye. The only preventive of these distressing accidents is the keeping of explosives under lock and key. It is regrettable that, despite cautions given on the subject by public bodies and others, so many users of explosives are undoubtedly so insensitive to their responsibilities as to fail to take such obvious and reasonable precautions as would prevent the possibility of these tragedies in child life."

Benefit of Industrial Medical Service

Medical service in industry is saving millions of dollars yearly both to employers and employees, according to a report of the National Industrial Conference Board of the United States.

While the policy of industrial medical supervision has been more extensively developed in the United States than in any other country in the world, it is pointed out in the report that American wage-earners will lose $250,000,000 a year in wages through absence due to illness. Industry also is a loser through illness of employee, through decreased output, increased labour turnover and trade losses through decreased purchasing power of workers. In one typical New England plant, it is said, employing 4,500 workers, illness cost the concern in one year more than $267,500. The workers lost $202,000 in wages, with $45,000 spent in medical care. Their disabilities entailed another $56,000 of expenses in charitable relief and care.

A recent report of the National Safety Council (U.S.A.) shows that during 1925 more than 85,000 men, women and children were killed in accidents on the streets, in the home and in industrial workshops. Of this number 21,000 were killed by automobiles, 25,000 fatally injured at work and 41,000 killed in public places other than the streets.

"To-day our big problem is to convince employers that accident prevention work must be made a major part of their programme, and we know that most of the fatalities in factories can be eliminated. While the National Safety Council, a non-profit-making co-operative institution, has more than 4,000 firms and individuals under its banner, there still are thousands unaware that these lost-time accidents do not merely happen, but are caused, and that once the causes are eliminated there will be no accidents."

Industrial Accidents to Children in Massachusetts

Under the direction of the commissioner of Labour and Industries of the State of Massachusetts an analysis has been made of injuries sustained by children in the industries of Massachusetts for the year ending June 30, 1924. This includes employees under eighteen years of age, the total number being 2,965. The outstanding feature of the study is the fact that a very large number of accidents to minors are preventable. "But few occurred as a result of violating statutes requiring the safeguarding of machinery or from failure to comply with regulations prohibiting employment in dangerous trades. Efficient factory inspection, coupled with active interest in the prevention of accident, must be maintained to keep the frequency of industrial injury at the lowest point. Education still remains an important factor. It should have prominent place in the plant experience of each employee. The product of this training will be the careful workman, who constitutes the best safeguard."

Massachusetts' experience indicated that two-thirds of the specific injuries in industry each year are attributable to machinery. This includes accidents resulting in dismemberment and loss of use. About eighty per cent of these occur at the point of operation, leaving but a small number occasioned by contact with belts, gears, set screws, fly-wheels, shaft-

ing or other movable parts. More than half of the specific injuries occurred on metal and wood-working machinery. Nearly all such employment is prohibited to minors under sixteen years of age.

The report suggests that accidents to minors would be diminished if adequate training were given before they are required to operate machinery without supervision. Two employees of the age group 16 to 17 were injured on their first day at work; five had less than a week's experience on the machine before the accident happened; eleven had worked less than a month and fifty-five less than a year. Machine parts making hundreds of revolutions per minute were not fully appreciated as grave hazards arising out of and in the course of employment. In some plants effective work was accomplished through safety committees in teaching inexperienced employees the value of exercising care in the use of the hands at the point of operation of metal-cutting, wood-working and other dangerous machinery.

Elsewhere it is stated that the basis of accident prevention work is efficient plant inspection. This includes not only the examination of machinery and general conditions in the establishment, but deals especially with creating interest in the prevention of injury to employees. Injuries treated in the first aid room of large establishments points conclusively to the danger zones in the plant. In these areas, efficient work may be done. No child should be employed in proximity to any hazardous or ungarded belts, machinery or gearing while such machinery or gearing is in motion.

NOTES ON LABOUR UNION ACTIVITIES

International Association of Heat and Frost Insulators and Asbestos Workers

The thirteenth convention of the International Association of Heat and Frost Insulators and Asbestos Workers convened on January 11, in Washington, D.C. After the various committees had been appointed, the Credential Committee presented their report, which showed fifty delegates in attendance, representing twenty-two locals.

The president in his address touched on many matters of importance to the various local unions, among which were: Territorial limits of local trade union agreements, strike assessments, the bonus, apprentices, and workers' education. He recommended a constitutional amendment fixing expulsion as the penalty for any of the members found in affiliation with any agency or organization advocating the taking over of government by force, and also that the membership privilege be confined to citizens of the United States and Canada or those who bind themselves to become such. The president further recommended the following legislative proposals to all state convention delegates representing local unions:—

1. Ratification by State Legislatures of the proposed constitutional amendment in regard to child labour in the United States.
2. An exclusive State Insurance Fund for Workmen's Compensation.
3. Prohibiting issuance of injunctions in industrial disputes unless authorized by a verdict after trial of facts before a judge and jury.
4. Amending the anti-monopoly law to provide that the labour of a human being is not a commodity or article of commerce.
5. Restoration of the original penalty for violations of eight-hour and prevailing-rate-of-wages legislation, in States that have modified the existing laws.
6. A forty-eight hour working week for employed women and minors who are more than sixteen years old.
7. Amendments to Workmen's Compensation Laws to increase compensation wage rate to a maximum of $30 a week; to abolish limitation of compensation for temporary disabilities and to revise occupational diseases sections so as to make all such illness compensable as injuries.
8. Providing for amending state constitutions so as to enable voters to initiate amendments by petition for immediate submission to referendum without intervention of legislature.
9. State building codes for cities with stringent laws covering safe building scaffolding and hoist inclosures.

These recommendations were subsequently adopted by the convention. The secretary-treasurer in his report informed the delegates that numerous communications had been received on co-operative insurance, but that the matter had been placed in the hands of International Vice-President E. A. Johnson, who was appointed to investigate and report to the convention at the present session. So much importance was attached to the subject mat-

ter of group insurance that it was declared a special order of business. After the subject had been discussed at considerable length, it was decided by the convention, that the question of insuring the membership would go to a referendum.

The election of officers resulted as follows: Pres., Joseph A. Mullaney, 15 Benham St., Elmhurst, L.I., N.Y.; Vice-President, Henry H. Holland, 4826 West Superior St., Chicago, Ill.; Vice-President, E. A. Johnson, 66 Walker St., West Roxbury, Mass.; Vice-President, Henry J. Oliver, 1371 West 89th St., Cleveland, Ohio; Sec.-Treas., Thomas J. McNamara, 803 Holland Building, St. Louis, Mo.

Winnipeg Trades and Labour Council

The Winnipeg Trades and Labour Council, at a meeting on March 2, adopted the following programme of labour legislation for submission to the Government during the present session of the Manitoba Legislature.

Amendments to the Mothers' Allowance Act to provide for the payment of allowances to (1) mothers with one child, (2) to mothers whose husbands are confined in public institutions or are physically unfit to support the family, (3) to mothers who have been deserted for a period of five years; the Minimum Wage Act to be applicable to all boys under 18 years of age.

A Trades Dispute Act similar to the Trades Dispute Act of Great Britain.

An Act limiting the hours of labour to not more than eight hours per day or more than 44 hours per week for all industries within the scope of provincial legislation.

An act prohibiting the employment of women for a period of two months before and two months after childbirth. The maintenance to be paid out of funds provided by the government.

That a commission of inquiry be appointed to investigate and collect data with a view to enacting the following legislation : Old age pensions, unemployment insurance, sick and disability insurance.

Union Labour Life Insurance Company

The work of the Union Labour Life Insurance Company is described by its president, Matthew Woll, in the February issue of the *American Federationist*. The LABOUR GAZETTE for November, 1925, noted that this company had been organized in consequence of action taken by the American Federation of Labour at the annual conventions of 1923 and 1924, and that it was already receiving support from some large international unions. The company received its charter in November, 1925, the officers being as follows:—

President, Matthew Woll.

Secretary-treasurer, G. W. Perkins.

Directors:—

Matthew Woll, Photo Engravers' Union.

G. W. Perkins, Cigarmakers' International Union.

Luther C. Steward, National Federation of Federal Employees.

Thomas F. Flaherty, secretary-treasurer, National Federation of Post Office Clerks.

Elmer E. Milliman, secretary-treasurer, Brotherhood of Maintenance of Way Employees.

James Maloney, president, Glass Bottle Blowers' Association.

Thomas E. Burke, secretary-treasurer, United Association of Plumbers and Steamfitters.

Thomas C. Cashen, president, Switchmen's Union of North America.

James M. Lynch, president, International Typographical Union.

Martin F. Ryan, President, Brotherhood Railway Carmen of America.

W. D. Mahon, President, Amalgamated Association of Street and Electric Railway Employees.

Wm. H. Johnston, President, International Association of Machinists.

Joseph N. Weber, President, American Federation of Musicians.

A. A. Myrup, Treasurer, Bakery and Confectionery Workers' International Union.

Morris Sigman, President, International Ladies' Garment Workers' Union.

Joseph C. Orr, Secretary-treasurer, International Printing Pressmen's and Assistants' Union.

In addition to these men an advisory committee is being organized which will consist of about fifty trade unionists selected from various parts of the country. This will make it possible for the company to have the benefit of experience and information with problems from all parts of the country. The board is to meet at least once a year. The arrangements provide that the railroad brotherhoods and other independent organizations not of a dual character can be represented directly on the advisory board and the board of directors. The home office of the company will be in Washington, D.C., in the American Federation of Labour Building.

The maximum capital amount of stock authorized by the articles of incorporation is $1,000,000, but the company may commence operations at any time deemed best by the board of directors after $300,000 have been paid in on capital stock subscriptions. The capital stock will be sold in units of $50 each, $25 on the par value of the stock and $25 to be applied to the creation of a surplus fund to be equal in amount to the capital. The sale of capital stock shall be confined to national and international trade unions, local unions, state federations of labour, city central bodies and other classes of organizations of labour and members thereof affiliated to the American Federation of Labour and such other labour organizations and members thereof as the board may from time to time direct.

In order that holdings of capital stock may be widely distributed and that all groups of organized labour may participate in the management of the company, the maximum amount of stock which will be sold to any national or international union shall be 800 shares, to any local union or central body, 80 shares, and to any individual 10 shares.

In order to assure trade union control over the stock, the company has established the rule that stock shall not be sold without first giving the company an option to purchase it either for its own account or for the purpose of re-sale at the price at which it was originally sold by the company plus a per cent not to exceed 6 per cent per annum on the investment. The company must make its decision upon any stock offered for re-sale within thirty days. Dividends on capital stock are to be limited to 6 per cent per annum upon the amount of original investment and capital stock and contributed surplus of the company. After the company makes its annual payment in dividends upon capital stock each year, it shall set aside an annual surplus for the protection of policyholders. The remaining profits are to be divided among the policyholders as the directors may determine.

The vote upon all questions in stockholders' meetings shall be by shares, each share of the stock entitling the holder to one vote.

The following committees are provided for in the bylaws of the Union Labour Life Insurance Company: Executive, Investment, Claims, Auditing and Advisory.

The company is to follow the regulations governing investments, which must be in approved securities of the United States and Canada and in approved state, county and municipal bonds.

It is the purpose of the Union Labour Life Insurance Company to issue all forms of insurance policies, but it will also concentrate its efforts on the working out of forms of policy that will be best adapted to the needs of the workers. It intends to enter the industrial insurance field and issue what is known as industrial policies, but of course at lower costs to the workers. It aims also to sell group insurance to labour unions, a form of insurance that until last year has not been sold to labour organizations, but only to employers who would insure their workers and thus have a firm grip on them. In other words, the purpose of the Union Labour Life Insurance Company is to sell insurance to individual workers without profit, to sell insurance to whole organizations of workers, thus strengthening the organizations and weakening the hold of employers on their workers through group insurance.

Bricklayers', Masons' and Plasterers' International Union

The benefit system adopted in January, 1914, by the Bricklayers', Masons' and Plasterers' International Union is described in a recent statement by Secretary John J. Gleeson. There are now 2,776 men and women drawing weekly benefits through the relief department of the organization. Of the total number of persons drawing benefits, 676 are widows, 2,013 are members drawing old age benefits and 77 are members drawing disability benefits. Each beneficiary in all classifications draws $7 per week. The total amount being paid out in benefits per week is $19,432. These were the figures as of December 31.

The benefit or relief system was adopted by the Bricklayers' International Union at its convention in January, 1914, and was put into effect a year later. An assessment of 25 cents per member per month was levied to cover the cost of operating the new department. In 1916 this was increased to 70 cents. At the outset the benefit paid was $5 per member per week but in 1922 this was increased to $7 the present figure.

The retirement age is 60 years. It is recognized, of course, that the number of members eligible to retirement benefits will increase as the years pass by, but the actuarial possibilities were taken into account when the fund was established.

The benefit paid upon the death of a member varies according to the length of membership. The minimum amount is $50. A beneficiary is entitled to the minimum amount if the deceased member had been on the rolls of the organization six months. The mortuary

benefit increases as follows: $150 after a membership of one year, $200 after a membership of five years, and $300 is the maximum after a membership of over ten years.

In addition to the benefit system the organization grants paid-up life membership cards to all who have held continuous membership for 50 years and to soldier members totally disabled in the World War. Of the six veterans who have applied for and have received paid-up life membership cards three are residents of Canada, two live in New York State and one in Pennsylvania.

There are sixty members holding paid-up life membership cards following 50 years of continuous active membership.

Fishermen's Association on Vancouver Island

Fishermen on Vancouver Island have organized The Consolidated Fishermen's Association for the West Coast, with headquarters at Ucluelet, for the purpose of securing to fishermen a better return for their product. The fishermen have now their own manager in the field looking up markets and to negotiate with both Canadian and United States buyers. There will be two buying stations at Ucluelet, one for Japanese and one for whites and Indians. Each carrier will make up its load from the two stations, also collecting at Banfield, which will give the carriers a chance to leave more regularly and assure that the fish will arrive at the market in first-class condition. An effort will also be made to find a market for certain kinds of fish that the fishermen, so far, have had to throw overboard, especially in the summer.

In the summer time, when weather conditions are favourable and there is a run of fish, the fishermen have had more or less trouble with regard to prices, and often decided to go on strike. As a strike means great loss to the fishermen, and also to the country, the fishermen, having their own manager in the field and being confident that buyers are receiving market prices, it is felt that there will be no need in the future for the trollers to go on strike.

ANNUAL CENSUS OF INDUSTRY OF CANADA

THE Dominion Bureau of Statistics, under the Statistics Act of 1918, takes annually by mail an industrial census, covering statistics of fisheries, mines, forestry and general manufactures in Canada. The annual census is in addition to the Bureau's decennial census and the statistics of population, finance, education, etc. Preliminary reports on various industries have been reviewed in previous issues of the LABOUR GAZETTE. These preliminary reports are consolidated from time to time in general reports issued by the Bureau.

Starch and Glucose Industry, 1924.

This report covers returns from 7 factories, 4 in Prince Edward Island, 2 in Ontario, and 1 in Quebec. The total value of production was $5,241,908 in 1924, notwithstanding a decrease of one of the number of plants in 1924. There were 68 employees on salaries earning $144,879 and 488 employees on wages earning $505,101. The most valuable product was glucose, valued at $1,706,674, others being edible corn starch, corn syrup, gluten, corn oil, laundry starch, grape sugar, potato starch, and other products. The average monthly employment during the year was 461 male and 27 female employees. The month of greatest employment was November, with 536, and the month of least employment was June, with 463. The average number of days in operation was 132.86, the average number of days idle being 171.14. The average number of hours per week was 57.4 and the average number of hours per day or shift was 9.4.

The total value of imports for consumption in Canada in 1924 was $556,976. Exports of goods the produce of Canada were valued at $28,219.

Wine Industry, 1924

The report covers 22 plants, including 19 in Ontario, 1 in Quebec and 2 in British Columbia. The gross value of products in 1924 was $1,325,333, a decrease of $299,049 from the previous year, although there was an increase of 290,926 gallons in the quantity of wine manufactured. There were 56 employees on salaries, earning $131,871 and 99 employees on wages, earning $100,004. The products in the order of value were as follows: fermented wine, grape juice, medicated wine, unfermented wine, syrup and fruit juice and other products. The average monthly employment during the year was 99, including 84 male and 15 female employees. The months of highest employment were October to December, whilst those of lowest employment were January to June. The average number of days plants were in operation on full time was 232.9, and on part time 13.4. The aver-

age number of hours worked was 48.4 per week and 8.8 per day. The total quantity imported in 1924 was 659,364 gallons valued at $1,237,357. The quantity of fermented wines exported was 4,485 gallons valued at $16,106.

Leather Glove and Mitt Industry, 1924

The report covers the years 1922, 1923 and 1924. The value of products was in the three years respectively $3,375,728; $3,864,662 and $3,202,556. The number of establishments was 48 in 1924 as against 56 in 1923 and 47 in 1922. These were situated in Quebec, Ontario, Manitoba and British Columbia, the majority being in Ontario. In 1924 there were 1,309 persons employed, a decrease from the preceding year of 265. There were 202 salaried employees and 1,107 wage-earners receiving in salaries and wages $990,534. The number of wage earners in 1924 was greatest in November when there were 1,217, being 810 in Manitoba and British Columbia. Employment was lower in January with 963 employees, there being 603 in Quebec, 284 in Ontario, and 76 in Manitoba and British Columbia. The average number of days in operation in 1924 was 278.5 and the average number of hourrs worked per week and per day, respectively, 47.8 and 8.1. The number of wage earners in month of highest employment by hours of labour was 475 working 8 hours or less, 608 working 9 hours and 297 working 10 hours.

Harness and Saddlery and Miscellaneous Leather Goods, 1924

Harness and Saddlery.—The report covers 278 establishments engaged in the manufacture of harness and saddlery in 1924, located in nine provinces, as compared with 312 in 1923. In both cases nearly 50 per cent were located in Ontario. In 1924 there were 1,146 persons employed, receiving in salaries and wages, $1,239,796, a decrease from the preceding year of 149 employees and a decrease of $60,524 in the amount paid in salaries and wages. The month of highest employment in 1924 was March, with 974 employees, and the lowest figure, 838 was reached in October. In the month of highest employment 164 employees worked 8 hours per day or less; 666 worked 9 hours; 197 worked 10 hours, and 2 worked over 10 hours. The average number of hours worked per day was 9.0. The average number of days in operation was 298.2. The total value of products in 1924 was $4,353,438, of which goods to the value of $2,316,841 were produced in Ontario.

Leather Belting.—The report covers 8 establishments, of which 5 were in Quebec, and 3 in Ontario, as against 5 in Quebec and 2 in Ontario in 1923. The production in 1924 was 634,431 pounds valued at $1,096,862, compared with 793,624 pounds in 1923, valued at $1,347,622. Counting belting, custom work and repairs, the total value of all products in 1924 was $1,355,587. In 1924 the number of salaried employees was 45, earning $98,964, with 141 wage earners earning $144,440.

Trunks and Valises.—The report covers 15 establishments in operation in 1924 as in the previous year. The location by provinces for each of the two years was Nova Scotia, 1, Quebec, 3; Ontario, 6; Manitoba, 4; and British Columbia, 1. The value of the production in 1924 was $2,038,908, a decrease from the preceding year of $426,847. The capital investment in 1924 was $2,139,634 as compared with $2,189,579 in 1923. The average number of employees was 656 of whom 576 were wage earners and 80 salaried. The total amount paid to employees was $687,337. The number of persons employed shows a decrease of 66, and the amount paid in salaries and wages indicate a reduction of $99,111. The month of highest employement in 1924 was April, with 617 employees, and the lowest figure, 526, was reached in December. In the month of highest employment, 54 employees worked 8 hours per day or less; 262 worked 9 hours; and 337 worked 10 hours. The average number of hours worked per day was 9.4. The average number of days in operation was 296.9.

Other Leather Goods.—This report covers establishments whose principal products do not come within the classification of any one of the special groups of the leather goods industry. The products of this group include hand bags and satchels, purses, pocketbooks and folders, belts (wearing apparel) bank books, straps, sporting goods, fancy articles of leather, etc. The number of establishments in operation in this group in 1924 was 40, a decline of 6 from the previous year. Quebec had a decrease of 3 and Ontario 3. The principal items of production in 1924 were purses, pocketbooks and folders—415,706 valued at $502,582—and hand bags and satchels—98,680, valued at $394,126. The value of fancy articles of leather made amounted to $390,764. The value of all products of the establishment in 1924 was $1,628,410, compared with $1,594,863 in 1923. The total number of employees was 593 in 1924 as compared with 617 in 1923. The amount of salaries and wages for 1924 were $556,150 as compared with $576,659 in 1923.

The total value of products of the industries of harness and saddlery, leather belting, trunks and valises and leather goods, n.e.s.,

combined for quantity and value, in 1924, was $9,376,343. The value of miscellaneous leather goods imported into Canada during the 12 months ending March 31, from the United Kingdom, was $188,954, with $322,791 from the United States and $4,544 from other countries, and the total exports during the same period amounted to $166 for the United Kingdom; $12,385 to the United States, and other countries, $10,390.

MINERAL INDUSTRY IN CANADA IN 1925

THE position of mining among the industries of the Dominion is shown in a Preliminary Report on the Mineral Production of Canada during the calendar year 1925, recently published by the Dominion Bureau of Statistics. "Mining, now third in rank among Canada's primary industries, contributes extensively to the wealth and prosperity of the Dominion," the report states. "Large tonnages of freight move from and to the mines; many subsidiary industries depend upon the mining industry for their prosperity. Canada's progress in the production of mineral wealth has been notable particularly in recent years; the developments in established fields have won the confidence of the investing public; the discovery of new mineral areas has provided attractive opportunities for those of a more speculative nature; the growth and evident stability of the mineral industry stamp it as one of the great and increasing factors in Canada's industrial and commercial life."

Great progress was made in Canada's mineral industry in 1925. In the aggregate for the year, the total yield from Canada's mines, quarries, oil and gas wells, metallurgical works and enterprises such as the manufacturing of cement, brick and other clay products, was valued at $224,846,237, an increase of $15,262,831 over the total of $209,583,406 for 1924, and well towards the record valuation of $227,859,665 attained in 1920, when the average range of metal prices was approximately 35 per cent higher than in 1925. In fact, had it not been for a change in the method of computing the production of nickel, the value of the output as reported for 1925, would have been in excess of the previous record. Metal mining experienced a boom which carried the total value of production in this field to a total of $117,189,262, an increase of $14,782,734 above the total for 1924; exclusive of coal, non-metals, at a value of $22,342,678 showed an increase of $4,140,657 over the figures for 1924; coal output was valued at $49,092,649 or $4,501,339 below the total for the previous year; structural materials and clay products registered an advance to $36,221,648 as compared with the value of $35,380,869 in the preceding year.

Among the metals, the remarkable advances in the production of gold, lead and zinc were most outstanding; improvement in outputs marked the totals for nickel, copper and cobalt; silver showed little change; there was an increase in the tonnage of iron ore exported from stocks at the mines.

Sales of asbestos increased during the year, so that the total for that commodity rose about 64,000 tons to 290,121 tons valued at $8,995,854, an increase of $2,285,024 above the sales in the preceding year. Advances in the production of other non-metallic minerals occurred in the figures for fluorspar, graphite, gypsum, natural gas, petroleum, quartz or silica, natural sodium sulphate and carbonate, salt, talc and soapstone.

Production figures for coal, feldspar, pyrites and mica were below those reported in 1924. Except in coal, the losses were negligible. Coal showed a loss in tonnage amounting to 508,796 tons, and as coal at the mines sold at slightly lower prices during the year, the value of the output showed an even greater loss proportionately than the tonnage.

Coal Production.—The production of coal in Canada by kinds and by provinces in 1924 and 1925 are shown in the following table, the production being represented in short tons.

Province	1924		1925	
	Quantity	Value	Quantity	Value
		$		$
Nova Scotia (Bituminous)	5,557,441	22,280,554	3,842,157	15,881,328
New Brunswick (Bituminous)	217,121	932,185	207,189	812,490
Saskatchewan (Lignite)	479,118	886,668	469,637	865,429
Alberta—				
Bituminous	1,514,382	6,839,892	2,145,430	8,425,830
Sub-bituminous	590,168	1,761,086	570,614	1,731,414
Lignite	3,085,179	10,283,340	3,151,169	9,653,744
Total	5,189,729	18,884,318	5,867,213	19,810,988
British Columbia (Bituminous)	2,193,667	10,601,998	2,742,484	11,720,437
Yukon (Bituminous)	1,121	8,265	721	1,977
Canada—				
Bituminous	9,483,732	40,662,894	8,937,981	36,842,062
Sub-bituminous	590,168	1,761,086	570,614	1,731,414
Lignite	3,564,297	11,170,008	3,620,806	10,519,173
Total	**13,638,197**	**53,593,988**	**13,129,401**	**49,092,649**

Prices.—Prices on iron and its products showed a lower general average in 1925 than in the preceding year; non-ferrous metal prices on the other hand rose about 10 per cent while structural materials dropped off 3 to 4 per cent.

Employment.—From the records on employment obtained by the Bureau of Statistics each month it appears that the mining industry on the whole afforded employment to 5 per cent fewer persons in 1925 than in the preceding year. Analyzing the figures one finds that metal mining showed an improvement in employment; non-metallic mining remained about the same; structural materials and clay products showed a reduction in the numbers employed and coal mining furnished much less employment in 1925 than in 1924. The Bureau's index on employment in the mining industry averaged 95.4 in 1925 as compared with an average of 100.6 in 1924.

Upwards of 64,000 persons find employment in Canada's mining industry. Ontario, British Columbia and Nova Scotia alone furnish employment to more than 45,000 persons. Nearly 20,000 are employed in Canada's metal mining and non-ferrous metallurgical works. About 34,000 people are employed in non-metal mining and approximately 11,000 in the production of structural materials and clay products. To these, salaries and wages totalling approximately $83,000,000 are paid annually. The importance of the purchasing power represented by the employees of Canada's mining industry is sometimes not fully appreciated. Fuel and electricity constitute an expense item reaching a total of almost $20,000,000 a year; much of the progress that has been possible in the mining industry in recent years has been due to the extensive development of hydro-electric power facilities.

Capital Employed.—Investment in Canadian mines amounts to approximately $632,444,000; of which $281,828,000 is invested in metal mining and metallurgical works treating Canadian ores; $259,361,000 represents the investment in non-metal mines and $91,255,000 the cost of properties and plants producing structural materials and clay products.

Investments in coal mining account for 23 per cent of the total capital employed in the mining industry. Gold quartz mines represent another 13 per cent of the capital; metallurgical works, 10 per cent; natural gas, 8 per cent; nickel-copper and silver-cobalt, 7 per cent each; cement, 6 per cent; clay products, 5 per cent, and stone, 2 per cent; the other mining industries account for the balance of the capital employed. Ontario mines account for 41 per cent of the total invested in the industry. For the other provinces the relative investments in mining expressed in percentages are as follows: British Columbia, 17 per cent; Alberta, 14 per cent; Quebec, 12 per cent; Nova Scotia, 9 per cent; Yukon, 4 per cent; and New Brunswick, Manitoba and Saskatchewan, 1 per cent each.

Wages and Hours of Barbers in Toronto

Mr. Leon Worthall, president of the Barbers' Federation of Canada, in the course of a recent interview at Toronto, stated that the working hours of the average barber in the city were from sixty-five to seventy hours per week. The shops were open from 8 a.m. until 8 p.m. through the week, and until 11 p.m. on Saturdays. The basic wage was considered to be $20 per week and 50 per cent over $28 of the gross takings. There were many barbers, he stated, who were not taking in a gross receipt over $35 per week, out of which the shop-owner had to pay wages, rent, light, heat, laundry, etc.

Mr. Worthall stated that the journeymen were not interested in increasing prices to the public, but they were interested in wages, and it was the intention of the Barbers' Union to carry on an organizing campaign along with the general organizing campaign of the Trades and Labour Council, and when sufficient men had been enrolled to present a working agreement to the master barbers calling for a minimum guarantee of 50 cents per hour or about $30 per week and 50 per cent over $40 per week taking. This would mean that some of the shops now operating on cheaper prices would have to raise their charges to 40 and 50 cents for hair cut, as the better class of shops were charging to-day.

A license and sanitary bill for barbers and barber shops will again be introduced at the next session of the Ontario Legislature.

THE EMPLOYMENT SITUATION AT THE BEGINNING OF FEBRUARY, 1926, AS REPORTED BY EMPLOYERS TO THE DOMINION BUREAU OF STATISTICS

ACCORDING to returns received from 5,817 employers, there was partial recovery on February 1 from the losses in employment recorded at the beginning of the year. The revival, like the decline from which it was a reaction, was less extensive than on the corresponding date last year, but the situation this year was decidedly more favourable than on February 1, 1925. The payrolls reported on the date under review included 744,860 persons, as compared with 738,115 in the preceding month. The index stood at 90.7 on February 1, while on January 1, 1926, it was 89.6 and on February 1, 1925, 1924, 1923, 1922 and 1921 it was 86.1, 90.6, 89.5, 78.9 and 90.1, respectively. Employment, therefore, was better than on February 1 of any other year of the record except 1924, when the index was practically the same.

The greatest improvement on the date under review was in manufacturing and logging, while employment in other industries, on the whole, continued to decline. Construction and transportation reported the most extensive losses.

Employment by Provinces

Recovery was noted in all except the Prairie Provinces; Ontario recorded the largest increases.

Maritime Provinces.—Further moderate gains exceeding those registered on the same date last year, were indicated in the Maritime Provinces. Logging, manufacturing, transportation and railway construction afforded greatly increased employment, but coal mining and highway construction were slacker. Statements were received from 497 firms having 62,969 employees, as against 62,508 on January 1. The index number stood at 85.1 at the beginning of February, as compared with 79.1 on February 1, 1925.

Quebec.—According to statistics from 1,259 employers, their staffs included 203,117 persons, compared with 200,238 in the preceding month. Manufactures showed considerable gains, mainly in textiles, iron and steel and pulp and paper. Logging, construction, mining, services and wholesale trade also reflected improvement. On the other hand, retail trade and transportation afforded less employment. Greater recovery was shown on February 1 a year ago, but employment then was below its present level.

Ontario.—Manufacturing and logging reported heightened activity, while further losses were indicated in construction, trade and transportation. The result was a gain of 6,315 persons in the working forces of the 2,697 employers making returns, who had 313,473 workers on February 1. Although this increase was smaller than on the corresponding date last year, the situation on the date under review was better than it was then, the index standing at 88.1 as compared with 83.4 on February 1, 1925.

Prairie Provinces.—There were further large losses in transportation and construction in the Prairie Provinces, and trade, manufacturing and coal mining also reported reductions. An aggregate payroll of 95,957 persons was employed by the 748 firms making returns, who had 100,966 employees on January 1. Smaller contractions were noted at the beginning of February last year, but employment at that time was in rather less volume.

British Columbia.—The recovery on February 1 in British Columbia was more pronounced than in previous years, and the index was higher than on that date of any other year of the record, standing at 103.6, as compared with 95.1 on February 1, 1925. The 617 reporting employers had 69,344 persons on their staffs, or 2,099 more than in the preceding month. Manufacturing, especially of lumber and iron and steel products, logging and shipping registered the greatest improvement, while construction showed a falling off.

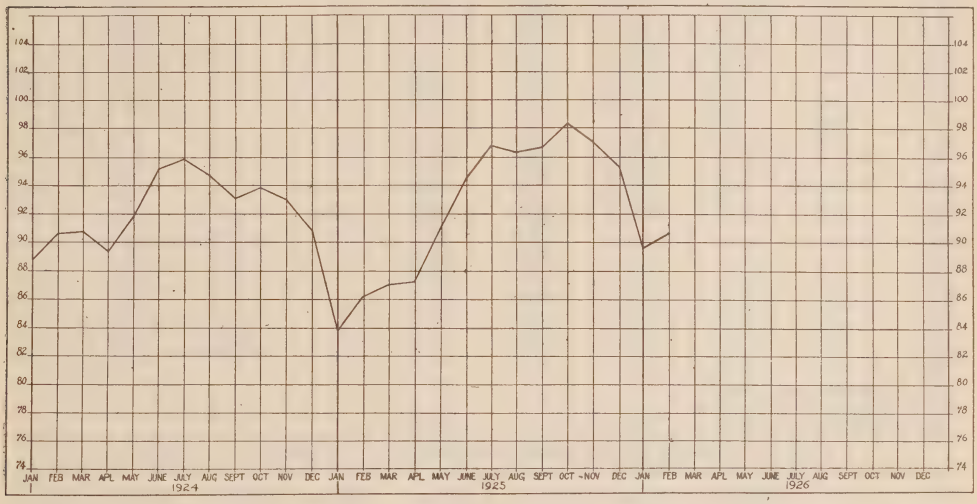
Index numbers of employment by economic areas are given in Table I.

Employment by Cities

Hamilton, Windsor and Vancouver registered increases in employment; in Ottawa there was a decline, while in Montreal, Quebec, Toronto and Winnipeg very little general change was shown.

Montreal.—There was considerable recovery in manufacturing in Montreal, especially in textile, iron and steel and tobacco factories, while trade and construction were seasonally slacker. The working forces of the 688 firms reporting aggregated 100,090 persons, as compared with 100,031 on January 1. Much more pronounced gains were noted on February 1, 1925, but the index then was lower.

Quebec.—Practically no change in the general situation was recorded by the 86 employers reporting in Quebec, who had 7,751 workers. Manufacturing was more active but construction and trade showed decreases. Marked



improvement was registered on the same date of 1925, when employment in that city reached its highest point for the year.

Toronto.—Substantial gains in manufacturing (particularly in textiles and iron and steel) were almost entirely offset by losses in retail trade. The result was an increase of 43 persons in the staffs of the 775 co-operating firms who employed 93,116 workers. Although more extensive revival was noted on February 1 last year, the index number then was somewhat lower than on the date under review.

Winnipeg.—Gains in the printing and some other industries were offset by declines in construction. The working force of the 277 establishments making returns stood at 24,771 persons, as compared with 24,790 on January 1. More marked losses were noted on February 1, 1925, when the situation was less favourable.

Vancouver.—Lumber and iron and steel works employed larger payrolls and shipping

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month, as indicated by the firms reporting, in comparison with the number of employees they reported in January, 1920, as 100.

Ottawa.—Employment in Ottawa declined, owing to curtailment in construction and trade. Statements were compiled from 133 firms employing 9,311 persons, as against 9,517 on January 1. Conditions reported were practically the same as on February 1, 1925.

Hamilton.—Manufacturing, especially of iron and steel, textile and chemical products, recorded considerable recovery, while construction was slacker. Employment was in much greater volume than at the beginning of February last year. An aggregate working force of 26,304 persons was reported by the 195 employers making returns, who had 25,764 workers on January 1.

Windsor and Other Border Cities.—The resumption of operations in automobile factories which had closed during the holiday season, caused pronounced improvement in the employment situation in Windsor and district, where the 81 co-operating employers increased their staffs by 4,101 persons to 10,215 on February 1.

Winnipeg.—Gains in the printing and some other industries were offset by declines in construction. The working force of the 277 establishments making returns stood at 24,771 persons, as compared with 24,790 on January 1. More marked losses were noted on February 1, 1925, when the situation was less favourable.

Vancouver.—Lumber and iron and steel works employed larger payrolls and shipping was also more active. Statistics were received from 231 firms having 23,913 persons in their employ, or 934 more than in the preceding month. Employment was in much greater volume than at the beginning of February last year; the index number then was 12 points lower than on the date under review.

Table II gives index numbers by cities.

The Manufacturing Industries

The largest increases were in iron and steel, in which many more persons found employment than had been released at the beginning of January. The textile, lumber, pulp and paper, leather, tobacco, non-ferrous metal and vegetable food groups also showed considerable improvement, which in several cases more than made up for the year-end lay-offs. Seasonal declines, however, continued to be shown in fish and other animal food-preserving establishments and in building-material works.

NOTE.—The number employed by the reporting firms in Jan. 1920, is taken as 100 in every case. The "relative weight" in Tables I, II and III shows the proportion of employees in the indicated district or industry to the total number of employees reported in all districts and industries on the date under review.

Electric current, musical instrument and rubber works also curtailed employment. The payrolls of 3,756 manufacturers reporting aggregated 422,516, or 12,679 more than at the beginning of January. The index number was slightly higher on February 1 than on that date in any of the last five years.

Animal Products, Edible.—Further curtailment of employment was noted in meat and fish preserving establishments, the reductions exceeding those indicated on February 1, 1925. Statements were received from 143 firms in the edible animal products division, employing 13,030 persons as against 13,700 in the pre-

TABLE III.—INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES (JAN. 1920=100)

Industry	Relative weight	Feb. 1 1926	Jan. 1 1926	Feb. 1 1925	Feb. 1 1924	Feb. 1 1923	Feb. 1 1922

NOTE.—The relative weight column shows the proportion that the number of employees in the indicated industry is o fthe total number of employees reported in all industries by the firms making returns on the date under review.

ceding month. All provinces shared in the downward movement.

Leather Products.—Employment in boot, shoe and other leather-using factories showed an increase at the beginning of February, when 566 persons were added to the staffs of the 194 manufacturers making returns who had 16,556 workers. Practically all the gains took place in Quebec and Ontario. Although the recovery indicated on the date under review was rather less than on February 1, 1925, the index number this year was slightly higher.

Lumber and Products.—The commencement of seasonal activity in this division caused increased employment; lumber mills, container, furniture and vehicle plants all registered larger payrolls. The gains, however, were not so pronounced as at the beginning of February last year, when the index stood at 75.5; as compared with 81.5 on the date under review. The working force of the 694 firms making returns aggregated 40,152 persons, as against 38,458 in the preceding month. All except the Maritime Provinces shared in this improvement, but that in British Columbia was most extensive.

Musical Instruments.—There was a decrease in musical instrument factories, 39 of which released 320 workers from their pay-rolls, which included 2,678 persons on February 1. Firms in Quebec and Ontario registered curtailment. Minor losses were noted on the same date last year; the index number then was a few points lower.

Plant Products, Edible.—The production of starch and glucose, bakery products, coffee and spices afforded more employment than at the beginning of January, while flour and other cereal mills, fruit and vegetable canneries and chocolate and cocoa works were slacker. An aggregate pay-roll of 25,444 persons was employed by the 316 co-operating manufacturers, who had 25,191 workers in their last report. There was no general change in Ontario and the Prairie Provinces, but elsewhere moderate gains were indicated. Curtailment was noted on February 1, 1925, and the index number then was below its level at the time of writing.

Pulp and Paper Products.—Substantial improvement was reported in pulp and paper mills, the increases being larger than those recorded in any month last year. The index number on the date under review stood at 103.2, as against 96.7 at the beginning of February, 1925. The 455 manufacturers making returns had 52,578 persons in their employ; this was 1,000 more than on January 1. Pulp and paper mills afforded greatly increased employment, but there was also improvement in printing and publishing establishments.

Rubber Products.—Further though not particularly large contractions were shown in rubber factories at the beginning of February. The situation continued to be decidedly better than on the same date a year ago, although increased activity was indicated then. A combined working force of 13,016 persons was reported by the 30 firms making returns, who had 13,293 employees in the preceding month. The reductions were confined to factories in Ontario.

Textiles.—Additions to staffs that exceeded the decreases of January 1, were reported in textile works on the date under review. Thread, hosiery, knitting, garment, personal furnishings and some other divisions of the group registered the greatest improvement. All provinces shared in the gains, which were most marked in Quebec and Ontario. The working force of the 519 manufacturers whose statistics were received, rose from 67,901 persons on January 1 to 70,850 at the beginning of February. The index number was nearly five points higher than on the corresponding date last year, when the somewhat more extensive improvement shown, represented recovery from larger losses than did the gains on the date under review.

Tobacco, Distilled and Malt Liquors.—Partial recovery from the heavy reductions indicated on January 1 was reported in tobacco factories in Quebec and Ontario. According to statistics from 104 firms in this division, they employed 10,504 persons on February 1, as compared with 10,053 in the preceding month. Much more pronounced improvement was noted on the same date in 1925, when the index number was between three and four points higher.

Chemicals and Allied Products.—Statements received from 111 manufacturers of chemical products showed that they increased their payrolls by 194 persons to 6,229 at the beginning of February. This increase, which took place largely in Ontario, was practically the same as that indicated on the corresponding date of last year, when the index number was slightly lower.

Clay, Glass and Stone Products.—Further curtailment of operations was registered in building material works, in which employment was in greater volume than on February 1, 1925. An aggregate working force of 7,359 persons was reported by the 111 employers making returns in this group; they employed 7,748 workers in the preceding month. Quebec and Ontario recorded most of the losses.

Electric Current.—There was another decline in employment in electric current plants, which, however, was rather less than the contraction that took place on the same date of

last year. The index number then was 125.0 as against 118.6 on February 1, 1926. The firms reporting, numbering 86, employed 10,980 persons, or 377 less than on January 1. The greatest reductions were in Quebec.

Iron and Steel Products.—There was a large increase in employment in iron and steel, which exceeded the losses registered at the beginning of January. Automobile, railway car, structural iron and steel and agricultural implement works, foundries and machine shops recorded the most noteworthy gains, while rolling mills reported the only declines of any size. Reports were compiled from 643 firms in this division, employing 116,465 persons, as compared with 109,404 in the preceding month. The situation was better than on the same date last year, when important increases had also been indicated. While there were gains in all except the Prairie Provinces, those in Ontario were very much the greatest.

Non-Ferrous Metal Products.—Lead, tin, zinc and copper plants reported increased activity, while smelters and refineries were rather slacker. Firms in Ontario registered practically all the improvement. The working force of the 104 employers whose statistics were tabulated, included 13,031 persons, in comparison with 12,664 at the beginning of January. The index number stood at 88.5, as compared with 76.1 on February 1, 1925.

Mineral Products.—Minor increases were reported in this industry at the beginning of February, when 118 persons were added to the staffs of the 75 co-operating firms, who employed 9,157 workers. Employment in this industry was better than on the same date of last year.

Logging

Logging camps registered decidedly greater activity, there being a much larger increase at the beginning of February than is usual at that time of year. Employment, however, was in less volume than on February 1, 1925. Statements for the date under review were received from 219 firms having 31,891 employees, as against 28,314 in the preceding month.

Mining

Coal.—Coal mining in Nova Scotia afforded less employment, and there were also smaller losses in the Prairie Provinces. This contraction was not so pronounced as that indicated on February 1 a year ago; the index number then was slightly below its present level. The 89 operators reporting employed 25,842 persons, or 1,178 fewer than at the beginning of January, 1926.

Non-Metallic Minerals other than Coal.—Slight increases were noted in this division of the mining group in Quebec, while elsewhere little change was shown. Seventy firms reported 5,696 persons on their staffs, as compared with 5,586 in their last report. Shrinkage in employment was recorded on the corresponding date last year; conditions then were decidedly less favourable.

Communication

A moderate reduction in working forces was recorded by telegraph companies, while telephone operation showed an insignificant gain. The 185 employers making returns had 23,073 workers, as against 23,215 in the preceding month. Employment declined to a greater extent at the same time last year, when employment was not quite as active.

Transportation

Street Railways and Cartage.—There was a rather small decrease in employment in this division, as is usual on February 1. The shrinkage took place chiefly in Ontario and the Prairie Provinces. Returns were tabulated from 116 employers whose staffs totalled 18,376 persons, while on January 1 they had 18,523 employees.

Steam Railways.—Continued curtailment of operations was indicated by the operation departments of the railways; 101 superintendents and other employers reported 73,660 workers, or 2,752 less than their last report. Improvement was noted in the Maritime Provinces, and in British Columbia there was practically no change, but in the remaining provinces employment showed a falling off, which was especially pronounced in the Prairie Provinces. Although a minor gain was recorded at the beginning of February, 1925, the number of persons employed in railway operation was smaller then than on the date under review.

Shipping and Stevedoring.—Shipping activity in British Columbia was greater than on January 1, but in Quebec and the Maritime Provinces moderate reductions were shown. There was a loss at the beginning of February of 64 persons in the staffs of the 51 employers reporting in the Dominion, who had 10,559 workers. On the corresponding date last year, a much larger decrease was registered.

Construction and Maintenance

Building.—Continued seasonal declines in personnel were recorded by the 312 building contractors making returns, who had 21,128 persons in their employ, or 708 less than on January 1. The losses in Ontario were most pronounced, while in Quebec improvement was

noted. Employment was in greater volume than at the beginning of February last year, when curtailment was also indicated.

Highways.—Employment on highway construction and maintenance showed a further large decline, 2,206 persons being released from the payrolls of the 99 co-operating contractors. They had 3,799 workers on February 1; this was a much smaller number than were reported on that date in 1925.

Railway.—There was a comparatively small decline in employment in the construction departments of the railways. Statements were tabulated from 31 employers having 26,123 persons on payroll as compared with 26,400 in the preceding month. In the Maritime Provinces, Quebec and Ontario heightened activity was reported, but there were contractions in the Prairie Provinces. Improvement was indicated on February 1, 1925, when the index number was higher.

Trade

Retail stores reported a smaller personnel, following the very active holiday season, while wholesale houses were busier. These changes were fairly general throughout the country. The 564 establishments whose statistics were compiled had 57,671 persons on their staffs; this was 2,236 less than in the preceding month. Trade afforded more employment than on February 1, 1925, when similar declines were registered. It was also brisker than on the same date in any previous year of the record.

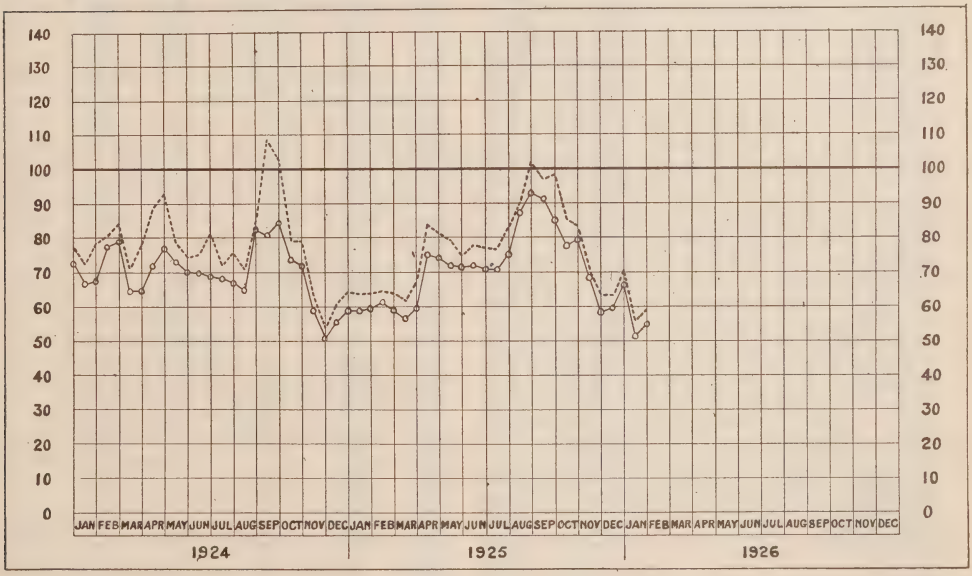
Table III gives index numbers of employment by industries as on February 1, and January 1, 1926, as at February 1 of the last four years. The column headed "Relative Weight" shows the proportion that the number of employees reported in the indicated industry bears to the total number of employees reported in Canada by the firms making returns on February 1, 1926.

EMPLOYMENT OFFICE REPORTS FOR JANUARY, 1926

THE volume of business transacted by the offices of the Employment Service of Canada during the month of January, 1926, as shown by the average daily placements effected, was practically the same as that of the preceding period, but registered a decline of 20 per cent when compared with the average daily placements effected during January, 1925, a contributing feature in the decline from last year being the small demand for snow shovellers during the current month.

The accompanying chart shows the trend of employment since January, 1924, as represented by the ratio of vacancies notified and placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, the computations being made semi-monthly. It will be seen that the curves of vacancies and placements in relation to applications declined sharply during the first half of the month, but again showed an upward trend during the latter half of the period under review. In both instances the ratio of vacancies and placements to applications were somewhat lower than those shown during January last year. The ratio of vacancies to each 100 applications was 55.9 and 59.4 during the first and second half of January, 1926, in contrast with the ratio of 63.7 and 63.9 during the same periods in 1925. The ratio of placements to each 100 applications during the period under review was 51.2 and 54.7 as compared with 58.9 and 59.5 during the corresponding month a year ago.

A summary of the reports from the offices shows that the average number of applications recorded during the first half of January was 1,619, as compared with 1,115 during the preceding period, and with 1,839 daily during the corresponding period in 1925. Applications for work during the latter half of the month registered 1,274 daily, in contrast with 1,428 daily during the latter half of January a year ago. Employers notified the Service of a daily average of 905 vacancies during the first half, and 758 during the latter half of the month under review, as compared with a daily average of 1,169 and 913 vacancies during the month of January, 1925. Vacancies offered to the Service during the latter half of December, 1925, averaged 787 daily. The Service effected an average of 829 placements during the first half of January, of which 573 were in regular employment and 256 in work of one week's duration or less, as compared with a total average placement during the preceding period of 738 daily and with 1,085 daily during the first half of January, 1925. During the latter half of the month under review placements averaged 698 daily (456 regular and 242 casual) as compared with an average of 849 daily during the corresponding period a year ago.



During the month of January, 1926, the offices of the Service referred 20,258 persons to vacancies and effected a total of 19,009 placements. Of these the placements in regular employment numbered 12,805, of which

9,987 were of men and 2,818 of women, while placements in casual work totalled 6,204. Opportunities for employment numbered 13,628 for men and 7,071 for women, a total of 20,699. The number of applications for work was 35,988, of which 26,442 were from men and 9,546 from women.

The following table gives the placements effected to date in the offices of the Employment Service of Canada:—

Year	Regular	Casual	Totals
1919 (10 months)	268,001	37,904	305,905
1920	366,547	79,265	445,812
1921	280,518	75,238	355,756
1922	297,827	95,695	393,522
1923	347,165	115,387	462,552
1924	247,425	118,707	366,132
1925	306,804	106,021	412,825
1926 (1 month)	12,805	6,204	19,009

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

NOVA SCOTIA

During the month of January there was an increase of over 7 per cent in the number of orders received when compared with December, and an increase of nearly 9 per cent over January last year. Placements were over 10 per cent higher than in December and over 4 per cent in excess of January, 1925. Industrial groups in which most of the placements were effected during the month were manufacturing 56; logging 118; services 208; and trade 81. Placements in regular employment numbered 190 of men and 85 of women.

NEW BRUNSWICK

Opportunities for employment listed at New Brunswick offices during January were nearly 21 per cent higher than in December and also during January, 1925. Placements were nearly 20 per cent higher than in December, and over 23 per cent above January last year. Increased demand for workers in the construction and maintenance group was mainly responsible for the gains under both comparisons. Industrial groups in which most of the placements were effected were manufacturing 51; logging 100; transportation 57; construction and maintenance 128; and services 425, of which 233 were of household workers. Regular employment was secured for 228 men and 86 women during the month.

QUEBEC

There was a decrease of over 15 per cent in the number of orders received during January when compared with the preceding month, but an increase of over 58 per cent when compared with the corresponding month last year. Placements were over 16 per cent less than in December but nearly 52 per cent in excess of January, 1925. The gains over the corresponding month last year were general in all industrial divisions. Placements during the

11 placements effected by offices since closed.

month in industrial groups included, manufacturing 101; logging 405; construction and maintenance 186; and services 507, of which 434 were of household workers. During the month under review 744 men and 498 women were placed in regular employment.

Ontario

Orders received at Ontario offices during the month of January were nearly 11 per cent less than in December, and nearly 34 per cent less than during January, 1925. Placements declined over 13 per cent from December, and about 35 per cent from January last year. The decline in the latter case was almost entirely attributable to the small call for snow shovellers during the month under review, for which class of workers there was a heavy demand in January, 1925. Placements by industrial groups included manufacturing, 1,041; logging, 1,762; farming, 438; transportation, 208; construction and maintenance, 2,434; services, 2,504, of which 1,599 were of household workers; and trade, 232. Regular employment was secured for 5,213 men and 899 women during the month.

Manitoba

Manitoba offices reported a decrease of over 9 per cent in the number of orders received during January when compared with the preceding month, and over 15 per cent in comparison with January last year. There was a reduction of nearly 6 per cent in placements under both comparisons. Farm placements declined, but there was an increase in the number of bush workers placed, most of whom were sent to camps in the Port Arthur zone. Industrial groups in which most of the placements were effected during the month included manufacturing, 77; logging, 618; farming, 325; and services, 1,276, of which 947 were of household workers. Placements in regular employment numbered 996 of men and 440 of women.

Saskatchewan

Employment opportunities as indicated by orders received at employment offices in Saskatchewan were nearly 3 per cent better during January than in December, and nearly 18 per cent above January last year. There was, however, a decrease of over 15 per cent in the placements effected when comparing the month under review with December but a gain of nearly 4 per cent in comparison with January, 1925. Farm vacancies and placements declined under both comparisons, but there was an increased demand for bush workers through the Prince Albert office, and a large number of placements were effected. Industrial groups in which most of the placements were effected were logging, 265; farming, 393; construction and maintenance, 65; and services, 682, of which 342 were of household workers. Regular employment was secured for 716 men and 309 women.

Alberta

There was an increase of nearly 18 per cent in the number of orders listed in Alberta offices during January when compared with the preceding month, but a decrease of over 7 per cent in comparison with the corresponding month last year. Placements increased nearly 21 per cent over December, but were between 8 and 9 per cent lower than during January, 1925. Most of the gains over December occurred in the logging industry. Placements by industrial groups included manufacturing, 95; logging, 537; farming, 316; construction and maintenance, 160; trade, 73; and services, 552, of which 353 were of household workers. During the month under review 1,123 men and 284 women were placed in regular employment.

British Columbia

Orders listed at employment offices in British Columbia were over 4 per cent higher than in December, but nearly 43 per cent less than during January last year. Placements were over 1 per cent higher than in December, but nearly 44 per cent lower than during January, 1925. The decrease from a year ago was nearly all due to a reduction in vacancies and placements under highway construction. During the winter of 1924-25 a considerable amount of this work was undertaken as a relief measure for unemployment. This has not been necessary during the present winter. There was also a smaller call for bush workers than during January last year. Industrial groups in which most of the placements were effected were manufacturing, 304; logging, 316; transportation, 151; construction and maintenance, 205; services, 747, of which 494 were of household workers; and trade, 89. During the month of January 777 men and 217 women were placed in regular employment.

Movement of Labour

During January, 1926, the offices of the Employment Service of Canada made 12,805 placements in regular employment, of which 6,939 were persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 1,455 were granted the Employment Service reduced transportation rate, 874 going to points within the same province as the despatching office and 581 to other provinces.

The reduced transportation rate which is 2.70 cents per mile with a minimum fare of $4 is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Quebec offices issued 216 special rate certificates, 153 provincial and 63 interprovincial. Of the provincial, Montreal granted 80 to bushmen and Quebec 73 to bushmen going to points within their own zones. Hull sent 61 bushmen to camps in the vicinity of North Bay and 2 bushmen to Cobalt. Ontario certificates numbered 495, of which 328 were granted to persons travelling to points within the province and 167 to other provinces. Those who benefited by the reduced rate provincially included 310 bushmen going to Fort William, Timmins, Port Arthur, Sudbury, North Bay, Cobalt and Belleville, one sign painter going from Toronto to Sudbury, one stenographer from Toronto to Timmins, 12 building construction workers from Port Arthur to its own zone, one cook and one handyman from Cobalt to Timmins and 2 cooks from Sudbury to Cobalt. Of the interprovincial transfers 154 were railway construction workers travelling from North Bay, Sudbury, Cobalt and Port Arthur to employment at O'Brien, Que. In addition, Ottawa sent two steel workers and Pembroke 10 bushmen to Hull, and Toronto one bookkeeper to Montreal. Manitoba offices issued 429 certificates for reduced transportation, 81 to points within the province and 348 to outside points. Of the latter, Winnipeg transferred 297 bushmen, 2 hospital workers, 4 cooks and two hotel workers to Port Arthur, 31 bushmen to Prince Albert, 2 hotel workers, one cook and 3 farm hands to Estevan, 2 farm hands to Saskatoon and 4 farm generals to Regina. Within the province Brandon sent one bushman to Dauphin and Winnipeg transferred 56 farm labourers, 6 farm generals, 2 cooks, one domestic and 2 hotel workers to the Brandon zone, one waitress, 2 bushmen and four farm workers to Dauphin, 4 farm labourers, one farm general and one housekeeper to its own zone. The offices in Saskatchewan granted 190 certificates, all provincial. Prince Albert transferred 20 bushmen and Moose Jaw 2 farm labourers to their respective zones, Regina shipped 67 bushmen and one farm labourer to Prince Albert, 4 farm labourers to Yorkton and one handyman to Moose Jaw and Saskatoon sent 78 bushmen and one domestic to Prince Albert, 3 farm workers to North Battleford, one farm labourer to Moose Jaw and 11 farm labourers and one porter to points within the zone. Of the 86 workers transferred by the Alberta offices, 3 were farm hands travelling from Edmonton to Saskatoon. Within the province, Calgary despatched 12 bushmen, one mechanic, one teamster, 4 farm hands, one blacksmith, 4 cutters, 5 sawyers and one cook to the Edmonton zone, one housekeeper and five farm labourers to Drumheller, one farm labourer to Lethbridge and 2 farm labourers within the zone. From Edmonton one farm labourer went to the Drumheller zone, 2 carpenters to Calgary, and 8 carpenters, 7 bushmen, 5 cooks, 4 enginemen, one fireman, one porter, 6 farm labourers, one bookkeeper, 4 mill hands, 2 bricklayers and 3 labourers to points within the Edmonton zone. The 39 transportation certificates granted by British Columbia offices were all to points within the province. From Vancouver one farm worker and 2 miners were sent to Kamloops, one waitress, one engineer and one chambermaid to Revelstoke, one cook, one flunkey and one farm worker to Penticton and one housekeeper, 3 miners and one farm labourer to points within its own zone. Nelson transferred 2 bushmen, Penticton one carpenter and one farm worker and Prince George 20 loggers and one cook to points within their respective zones.

Of the 1,455 workers who benefited by the Employment Service reduced transportation rate 942 were carried by the Canadian National Railway, 448 by the Canadian Pacific Railway, 63 by the Temiskaming and Northern Ontario Railway and 2 by the Kettle Valley Railway.

Advisory Immigration Board Proposed in Manitoba

The Manitoba Economic Conference, at their annual meeting held at Winnipeg on February 18, passed the following resolution:—

"Resolved, that this conference approves of the appointment of an advisory board in connection with a survey of lands in the province of Manitoba available for settlement, and would respectfully urge that steps be taken by the provincial government to supplement the work of the board by establishment of some organization to deal in a practical manner with the problems of colonization and land settlement with a view to increasing production and agricultural population on sound economic lines, the work of such an organization to be made self-supporting in so far as possible."

The formation of the Manitoba Economic Council was noted in the LABOUR GAZETTE, April, 1924, page 309.

BUILDING PERMITS IN CANADA IN JANUARY, 1926

REPORTS from sixty cities again indicated a decrease in January as compared with the preceding month and also as compared with January, 1925. The building authorized was valued at $4,608,688; this was 37.2 per cent less than the December total of $7,341,752 and 15.3 per cent less than the January, 1925, total of $5,440,770.

Some forty-five cities furnished detailed statements showing that they had issued over 550 permits for dwellings estimated to cost about $2,200,000 and over 900 permits for other buildings valued at approximately $1,900,000.

New Brunswick, Manitoba, Alberta and British Columbia registered increases in the value of the permits issued, as compared with the preceding month; that of $727,027, or 103.2 per cent, in British Columbia being the greatest absolute gain, but the proportional increase in New Brunswick was larger. Nova Scotia, Quebec, Ontario and Saskatchewan reported decreases, that of $2,241,505 or 53.7 per cent in Ontario being the greatest absolute loss, but the proportional decrease was greater in the other three provinces.

As compared with January, 1925, Nova Scotia New Brunswick, Manitoba, Alberta, and British Columbia reported increases, the largest of which was $632,519 or 79.2 per cent in British Columbia. Declines were registered in the other provinces, the largest $962,462 or 33.3 per cent, being in Ontario.

Montreal, Toronto and Ottawa showed decreases as compared with December, 1925, and January, 1925; Hamilton showed a loss compared with last month's figures, but a gain over January of the previous year; Vancouver registered gains in both comparisons. Other cities showing gains over both last month and the corresponding month of last year were St. John, Shawinigan Falls, Westmount, Niagara Falls, Oshawa, Peterborough, Port Arthur, St. Thomas, Sault Ste. Marie, Windsor, Walkerville, St. Boniface, Calgary, Edmonton, Nanaimo, Prince Rupert and South Vancouver.

The accompanying table gives the value of the building permits issued by sixty cities during January, 1926, and December and January, 1925. The thirty-five cities for which statistics are available since 1910 are marked with asterisks.

ESTIMATED COST OF BUILDING WORK AS INDICATED BY THE VALUE OF BUILDING PERMITS ISSUED IN 60 CITIES.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

DURING February the Department received information regarding eight contracts executed by the Government of Canada, which included among their provisions the fair wages conditions sanctioned by Order in Council for the protection of the labour to be employed thereunder. In six of these contracts the general fair wages clause is inserted as follows:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may fom time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Each of the remaining two contracts contained a schedule of rates and hours based on the current standards of the districts in these respects. These schedules are given below.

The following general labour conditions sanctioned by the Fair Wages Order in Council appear in the eight contracts above referred to:—

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the Contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

2. The Contractor shall post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the Fair Wages Clause or Schedule inserted in his contract for the protection of the workmen employed, also any decision of the Minister of Labour under the preceding paragraph.

3. The Contractor shall keep proper books and records showing the names, trades, and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, and the books or documents containing such record shall be open for inspection by the Fair Wage Officers of the Government at any time it may be expedient to the Minister of Labour to have the same inspected.

4. The Contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of the contract in respect of work and labour performed in the execution of the contract unless and until he shall have filed with the Minister in support of his claim for payment a statement attested by statutory declaration, showing (1) the rates of wages and hours of labour of the various classes of workmen employed in the execution of the contract; (2) whether any wages in respect of the said work and labour remain in arrears; (3) that all the labour conditions of the contract have been duly complied with; or, in the event of notice from the Minister of Labour of claims for wages, until the same are adjusted. The Contractor shall also from time to time furnish the Minister such further detailed information and evidence as the Minister may deem necessary in order to satisfy him that the conditions herein contained to secure the payment of fair wages have been complied with, and that the workmen so employed as aforesaid upon the portion of the work in respect of which payment is demanded have been paid in full.

5. In the event of default being made in payment of any money owing in respect of wages of any workmen employed on the said work and if a claim therefor is filed in the office of the Minister and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of the moneys at any time payable by His Majesty under said contract and the amounts so paid shall be deemed payments to the Contractor.

6. These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payments for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

7. With a view to the avoidance of any abuses which might arise from the sub-letting of contracts it shall be understood that sub-letting other than such as may be customary in the trades concerned is prohibited unless the approval of the Minister is obtained; sub-contractors shall be bound in all cases to conform to the conditions of the main contract, and the main Contractor shall be held responsible for strict adherence to all contract conditions on the part of sub-contractor; the contract shall not, nor shall any portion thereof be transferred without the written permission of the Minister; no portion of the work to be performed shall be done at the homes of the workmen.

8. All workmen employed upon the work comprehended in and to be executed pursuant to the said contract shall be residents of Canada, unless the Minister is of opinion that Canadian labour is not available or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Department of Public Works

Contracts containing schedule of wages and hours

Construction of a boat house, ramp and float at Pilgrims Cove (R.C.N. Barracks), Esquimalt, B.C. Names of contractors, Watson, Stewart and Kennedy, Vancouver, B.C. Date of contract, January 30, 1926. Amount of contract, $8,087.74. A fair wages schedule is inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours per day
	$ cts.	
Bricklayers and masons	9·00 per day	8
Carpenters and joiners	6·00 "	8
Concrete workers	0·55 per hour	8
Electrical workers	7·00 per day	8
Labourers	0·45 per hour	8–9
Lathers	6·00 to 7·00 per day	8
Marble setters	9·00 per day	8
Marble setters' helpers	5·50 "	8
Painters and glaziers	6·00 "	8
Plasterers	8·00 "	8
Plumbers and steam fitters	7·20 "	8
Plumbers and steam fitters' helpers	5·00 "	8
Roofers	6·50 "	8
Sheet metal workers	7·20 "	8
Structural steel workers	9·00 "	8
Teamsters one horse and cart	7·00 "	9
Teamsters two horses and wagon	9·00 to $10·00 per day	9

Erection of two bath houses at R.C.N. Barracks, Esquimalt, B.C., and repairs to steps, verandah, etc., at R.C.N. Barracks, Esquimalt, B.C. Names of contractors, Williams, Trerise and Williams, Victoria, B.C. Date of contract, February 8, 1926. Amount of contract, $1,938. A fair wages schedule is inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours per day
	$ cts.	
Bricklayers and masons	9·00 per day	8
Carpenters and joiners	7·00 "	8
Concrete workers	0·55 per hour	8
Electrical workers	7·50 per day	8
Labourers	0·45 per hour	8–9
Lathers	0·07 to 0·09 per yard	8
Lathers	8·00 to $10.00 per day (according to efficiency)	8
Marble setters	9·00 per day	8
Marble setter's helpers	5·50 "	8
Painters and glaziers	6·50 "	8
Plasterers	9·00 "	8
Plumbers and steam fitters	8·00 "	8
Plumbers and steam fitters' helpers	5·00 "	8
Roofers	6·50 "	8
Sheet metal workers	8·00 "	8
Structural steel workers	9·00 "	8
Teamsters one horse and cart	7·00 "	9
Teamsters two horses and wagon	9·00 to $10·00 per day	9

Contracts containing the general Fair Wages Clause

Dredging Victoria Harbour (Hospital Rock), B.C. Name of contractors, Northwestern Dredging Company, Limited, Vancouver, B.C. Date of contract, January 16, 1926. Amount of contract, Class "A" $7.90 per cubic yard place measurement. Approximate expenditure, $18,407.

Alterations to fittings, etc., in the Post Office at Jonquières, P.Q. Name of contractor, J. B. A. Lachance, Lévis, P.Q. Date of contract, January 18, 1926. Amount of contract, $1,800.

Reconstruction of the Public Wharf at Dauphin Beach, Lake Dauphin, Dauphin County, Manitoba. Name of contractor, Isaac Silverwood, Dauphin, Man. Date of contract, December 28, 1925. Amount of contract, unit prices. Approximate expenditure, $2,842.

Supply and installation of an air compressor plant fully equipped to be installed in the pump-house at the New Dry Dock at Esquimalt, B.C. Name of contractors, Canadian Ingersoll-Rand Company, Limited, of Montreal, P.Q. Date of contract, January 30, 1926. Amount of contract, unit prices. Approximate expenditure, $20,776.

Supply and installation of interior fittings in the Public Building at Maniwaki, P.Q. Name of contractors, The J. T. Schell Company, Alexandria, Ont. Date of contract, February 2, 1926. Amount of contract, $1,225 (for oak).

Construction of stables (four units) at the Fort Osborne Barracks, Winnipeg, Man. Name of contractors, Hazleton and Walin, Limited, Winnipeg, Man. Date of contract, February 8, 1926. Amount of contract, $39,500.

POST OFFICE DEPARTMENT

The following is a statement of payments made in February, 1926, for supplies ordered by the Post Office Department, under contracts which are subject to the Fair Wages policy:—

Nature of orders	Amount of orders
	$ cts.
Making metal dating stamps and type, also other hand stamps and brass crown seals	837 62
Making and repairing rubber stamps, daters, etc.	314 71
Making up and supplying letter carriers' uniforms, etc.	21,162 66
Stamping pads, ink, etc.	150 91
Mail bag fittings	1,844 65
Scales	2,332 41
Repairs to letter boxes, etc.	68 05
New letter boxes	468 53

PRICES, RETAIL AND WHOLESALE, IN CANADA, FEBRUARY, 1926

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was towards slightly lower levels, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being somewhat lower. The decline in the former was due mainly to seasonal influences.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities, was $11.50 at the beginning of February, as compared with $11.63 for January; $10.93 for February 1925; $10.75 for February 1924; $10.53 for February 1923; $10.61 for February 1922; $14.08 for February 1921; $16.92 for June 1920 (the peak); $12.54 for February 1918; and $7.75 for February 1914. Eggs showed a substantial seasonal decline amounting to 21 cents for the two dozen included in the budget. Decreases also occurred in the prices of butter, cheese, bread, evaporated apples, lard and rice. Potatoes were substantially higher, while less important advances occurred in beef, veal, mutton, fresh and salt pork, bacon and coffee. Including the cost of fuel and rent with that of foods, the total budget averaged $21.87 at the beginning of February, as compared with $21.96 for January; $21.19 for February 1925; $21.18 for February 1924; $21.17 for February 1923; $21.07 for February 1922; $24.85 for February 1921; $26.92 for July 1920 (the peak); $19.80 for February 1918; and $14.54 for February 1914. Fuel again advanced due to higher prices for anthracite coal. Rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the commercial importance of the commodities, was slightly lower at 162.2 for February, as compared with 163.8 for January; 164.7 for February 1925; 156.8 for February 1924; 153.6 for February 1923; 153.5 for February 1922; 191.1 for February 1921; 256.7 for May 1920 (the peak); 200.5 for February 1919; and 192.0 for February 1918. Fifty-one prices quotations were lower, twenty-four were higher and one hundred and sixty-one were unchanged.

In the grouping according to chief component material six of the eight main groups moved downward, one advanced and one was practically unchanged. The Vegetables and their Products group and the Animals and their Products group showed the greatest declines, that in the former due mainly to lower levels for grains, flour and milled products, potatoes and rubber, and in the latter due to declines in the price of eggs, which more than offset somewhat higher prices for hogs and butter. The other groups which declined were: The Fibres, Textiles and Textile Products group, due to lower prices for cotton, wool, flax fibre, jute and hessian; the Non-Ferrous Metals and their Products group, due to declines in the prices of silver, lead, spelter and aluminum; the Chemical and Allied Products group, due to declines in shellac and glycerine; and the Iron and its Products group. Non-Metallic Minerals advanced slightly, due to a rise in the price of gasoline. The Wood and Wood Products group was practically unchanged.

In the grouping according to purpose both consumers' goods and producers' goods declined. In the former group higher prices for tea, coffee, sugar, butter, lard hogs and gasoline were more than offset by declines in the prices of flour, eggs, potatoes, cheese and pepper. In the latter group materials for the textile and clothing industries, for the leather industry, for the metal working industry, for the chemical using industries, for the milling industries, as well as miscellaneous producers' materials, declined, while materials for the fur industry and for the meat packing industry advanced somewhat. Building and construction materials were somewhat lower, due to declines in painters' materials.

In the grouping according to origin raw or partly manufactured goods declined, due mainly to lower prices for grain, potatoes, eggs, rubber, cotton, wool, jute, lead, silver, zinc and aluminum. Fully or chiefly manufactured goods were unchanged. Domestic farm products were down. Articles of forest origin and of mineral origin were slightly higher, while articles of marine origin were unchanged.

The Canadian Bank of Commerce index of wholesale prices of exports advanced from 163.57 for January to 164.19 for February. That for imports was substantially higher at 174.45 for February, as compared with 162.95 for January. The combined index of both imports and exports advanced from 163.26 to 169.32.

Professor Michell's index number of forty articles with prices during 1900 to 1909 as 100, advanced to 182.0 for February, as compared with 181.3 for January; 180.0 for February

1925; 264.1 for February 1920; and 117.4 for February 1914. The index number of twenty food stuffs was slightly lower at 200.7 for February, as compared with 201.1 for January. That for manufacturers' goods advanced to 163.3 for February, as compared with 161.6 for January.

The index number of wholesale prices in Canada calculated by the United States Federal Reserve Board and published in this article each month in recent years has been discontinued by the Board, along with similar indices for certain other countries.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. This index number has been calculated by years back to 1890, being unweighted, however, for the period 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925, January, 1926, and in greater detail in the Report on "Prices and Price Indexes 1913-1924," issued by the Bureau. A description of the methods used in the construction of the index number appears in the LABOUR GAZETTE for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of February of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE *resident* in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods; laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholsale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Cost of Electric Current for Householders*

With rates in 1913 at 100, index numbers of electric light rates were: 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1;

* LABOUR GAZETTE, December 1923, page 1442.

1913, 100.0; 1914, 96.5; 1915, 90.8; 1919, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5.

Retail Prices

Beef prices again showed a general advance, sirloin steak being up from an average of 28.2 cents per pound in January to 28.6 cents in February; rib roast from 21.1 cents in January to 21.4 cents in February; shoulder roast from 15.3 cents in January to 15.6 cents in February,and stewing beef from 11.8 cents in January to 12 cents in February. Veal and mutton both advanced, the former averaging 19.2 cents per pound, as compared with 18.5 cents in Januray, and the latter averaging 29.5 cents per pound, as compared with 28.9 cents. Increases occurred in most localities. Fresh pork roast was up from an average of 28.5 cents per pound in January to 29.1 cents in February, and salt pork from 26.9 cents per pound to 27 cents. Bacon was also slightly higher, averaging 41.7 cents per pound. In fresh fish cod steak advanced, while halibut and white fish were slightly lower. Salt cod was up from an average of 20.7 cents per pound to 21 cents. Finnan haddie showed little change. Lard was slightly lower, averaging 24.7 cents per pound, as compared with 24.9 cents in January. Eggs showed a general decline, fresh averaging 50.5 cents per dozen, as compared with 62.8 cents in January, and cooking averaging 41.5 cents per dozen, as compared with 50.1 cents.

Lower prices for milk were reported from Belleville and North Bay, while an increase occurred at St. John, N.B. Butter averaged lower, dairy being 45.4 cents per pound in February and 46 cents in January, and creamery being 49.8 cents per pound in February, as compared with 50.7 cents in January. Somewhat lower prices were reported from most localities. Cheese declined from an average of 33.4 cents per pound to 32.9 cents.

Lower prices for bread were reported from Fredericton, North Bay and Brandon, while an increase was reported from Three Rivers. Soda biscuits were slightly higher, averaging 18.6 cents per pound. Flour was unchanged in the average, increases in some localities being offset by declines in others. Rolled oats was steady. Rice averaged slightly lower at 10.9 cents per pound. Canned tomatoes were down from 17 cents per tin to 16.7 cents, and corn from 16.8 cents per tin to 16.6 cents. Beans were steady. Onions were slightly higher at 4.9 cents per pound in the average. Potatoes showed a general advance, the average price for February being $2.92 per ninety pounds, as compared with $2.64 for January. The increases were greatest in the Eastern provinces, the prices in the Western provinces showing relatively little change. Evaporated apples were down from an average of 20.3 cents per pound to 20 cents. Prunes showed little change. Raisins rose from 17.5 cents per pound to 17.7 cents. Raspberry jam was slightly lower. Canned peaches and marmalade showed little change. Corn syrup fell from an average of 46.8 cents per five pound tin to 46.4 cents. Sugar was unchanged in the average. Coffee was slightly higher, averaging 61.1 cents per pound. Tea and cocoa were unchanged. Pepper was up from an average of 46.9 cents per pound to 50.3 cents. Cream of tartar was slightly lower at 59.6 cents per pound.

Anthracite coal advanced in the average from $18.35 per ton to $18.93. Higher prices were reported from Windsor, N.S., Charlottetown, Quebec, Three Rivers, St. John's, P.Q., Thetford Mines, Montreal, Ottawa, Kingston. Toronto, St. Catharines, Hamilton, Owen Sound, Cobalt and Sault Ste. Marie. Bituminous coal was also slightly higher, averaging $10.59 per ton. Hard wood, four feet long, declined slightly, averaging $12.24 per cord, as compared with $12.30 in January. No changes were reported in rent.

Wholesale Prices

The following is a summary of a statement on prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices moved to slightly lower levels. No. 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis, averaged $1.54¾ per bushel, as compared with $1.56½ for January. The high price for the month was $1.61⅜, reached near the beginning, and the low $1.48⅜, reached towards the end. The decline was said to be due to poor export demand and the competition of Australian and Argentine wheat. Coarse grains were also somewhat lower, Western barley being down from 61¼ cents per bushel, to 59 cents; oats from 47⅓ cents per bushel to 45½ cents; flax seed from $2.13 per bushel to $2.05; American yellow corn from 91¼ cents per bushel to 88¼ cents; and rye from 88½ cents per bushel to 85¾ cents. Flour moved in sympathy with wheat prices, declining at Toronto from $9.14¼ per barrel to $9.05½. Linseed oil was down from $1.08 per gallon to $1.06. Raw sugar advanced from $3.68 per hundred to $3.74, and granulated from $5.89 to $5.99. Coffee and tea were somewhat higher. Potatoes at Montreal declined from $3.06 per bag to $2.92¼, and at Toronto from $3.40-$3.50 per bag to $3-$3.25. Turpentine declined 3 cents per gallon to $1.55. Ceylon rubber was down from 83½ cents per pound to 62½ cents. Western cattle at Winni-

peg declined from $7 per hundred pounds to $6.78. Hogs at Toronto advanced from $13.82 per hundred pounds to $14.29. Sheep also advanced from $6.87½ per hundred pounds to $7.50. Creamery butter at Montreal rose from 46 cents per pound to 47 cents, and at Toronto from 48 cents per pound to 49 cents. Lard, in sympathy with the higher prices for hogs, advanced from 17½-18½ cents per pound to 18½-18¾ cents. Fresh eggs at Montreal fell from 50-52 cents per dozen to 44-46 cents, and storage eggs at Toronto from 38½ cents per dozen to 30½ cents. Raw cotton at New York was slightly lower at 20.7 cents per pound. Sash cord was down from 54 cents

(Concluded on page 289)

per pound to 52 cents. Flax fibre was 5 cents per pound lower at 20-25 cents. Jute was $15.05 per hundred, as compared with $15.66 in January. Declines of 1 cent to 2 cents per pound occurred in wool. Copper rose from $15.90 per hundred to $16.15, and copper sheets from 21½ cents per pound to 21¾ cents. Tin was up from 64⅝ cents per pound to 65½ cents. Lead declined from $9.10 per hundred to $9; spelter from $10.15 per hundred to $9.35; aluminum from 25½ cents per pound to 25 cents, and silver from 68¾ cents per ounce to 66¾. Gasoline at Toronto advanced from 23½ cents per gallon to 24½ cents.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movement of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities of the wholesale prices index numbers are named in all cases. The trend of wholesale prices and of the cost of living in the principal countries, including Great Britain and the United States, was downward during the early part of the year.

In regard to the wholesale prices index numbers formerly computed by the Federal Reserve Board of the United States for the United States and various foreign countries, and referred to in this section in previous issues of the Labour Gazette, the publication of these indexes for England, Canada, Japan and the United States was discontinued with the March issue of the Federal Reserve Bulletin.

Great Britain

The Board of Trade index number, on the base 1913 = 100, was 151.3 in January, a decline of 1.2 per cent for the month. Foods declined 2.7 per cent as there were declines in each of the separate groups. Non-foods declined slightly, the miscellaneous group showing the most marked change.

The *Economist* index number, on the base 1901-1905 = 100, was 188.1 at the end of February, a decline of 1.2 per cent for the month. Cereals and meat and textiles declined and other foods, minerals and the miscellaneous group showed slight advances.

The *Statist* index number (in continuation of Sauerbeck's figures, base period 1867-77 = 100) was 129.3, as against 130.4 at the end of December, the lowest recorded since October, 1923.. Foodstuffs and materials fell about equally. Only three groups of commodities showed a decline: vegetable foods, minerals and textiles. Animal foods and groceries showed a recovery while sundries were unchanged.

The *Times* index number for January 30, having as base 1913 = 100, was 149.4, a decline of 2.2 per cent from the previous month's level. The average of the three food groups was 4.1 per cent lower than in December. The decline for industrial materials was 1.1 per cent. All food groups were lower, the decline of meat and fish being 7.6 per cent. The cotton group rose 2.4 per cent and other groups under "materials" declined.

Cost of Living.—The index number of the Ministry of Labour, on the base July, 1914 = 100, fell one point to 172 on March 1. Foods fell 3 points to 165 and other groups showed no change, being as follows: rent, 148; clothing, 225; fuel and light, 185; sundries, 180.

Austria

Cost of Living.—The index number of cost of living formerly compiled by the Paritätische Kommission was discontinued in July, 1925, and in December, 1925, the monthly statement showing the retail price of foods was brought to a conclusion. These have been superseded by a new index number of changes in the cost of living, for food, drink and tobacco, clothing, housing, heating and lighting and sundries. The details of the construction of the new budget were shown in the January 25, 1926, issue of *Statistische Nachrichten,* the index being worked out in schillings for December, 1925, and January, 1926. On the base of the previous month's figures taken as 100 the index for January, 1926, was 99.79, all groups being 100 except food which was 99.58.

Belgium

Wholesale Prices.—The index number of the Ministry of Industry and Labour, on the base April, 1914 = 100, was 565 for December, a decline of four points from the previous month. There were slight declines in the groups food products, metal products, fertilizer, fats, textiles, and rubber, and advances in tar and clay products. Other groups showed no change.

Cost of Living.—The official index number, with base 1921 = 100, for a working-class family of the lowest category, was 140.46 for

January, a decline of 1.1 per cent. The change was caused by a decline in foods, other groups showing only slight changes. The index number for a middle-class family was 140.18, showing a decline of 2.7 per cent. This was due to a decline of 4.3 per cent in foods. Sundries rose slightly.

Denmark

The official index number of cost of living, on the base July, 1914 = 100, published every six months, was 194 in January as against 219 in July, 1925, a decline of 11.4 per cent. Foods declined 15.7 per cent to 177; clothing declined 15.5 per cent to 230; fuel and light declined 9.9 per cent to 227 and sundries declined 11.3 per cent to 181. Housing was unchanged at 178 and taxes and dues at 260.

France

WHOLESALE PRICES.—The index number of *Statistique Générale,* on the base July, 1914 = 100 was unchanged in January being 647, with 646 in December. Foods rose slightly to 531 and materials fell slightly to 748. There were no noteworthy changes in any of the groups.

COST OF LIVING.—The official index number of cost of living, Paris, on the base 1914 = 100, was 421 for the fourth quarter of 1925, as against 401 for the third quarter, showing an increase of 5 per cent. Foods rose 4.3 per cent to 437; heat and light rose nearly 8 per cent to 402; rent was unchanged at 220; clothing rose 9.8 per cent to 510, and sundries were unchanged at 450.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Board, on the base gold prices in 1913 = 100, showed very little change in January, being 120.0 for the month as against 121.5 for December. All groups showed slight declines except colonial products which rose slightly, and coal and iron, which showed no change.

COST OF LIVING.—The official index number of gold prices, 1913-14 = 100, fell from October, 1925, to January, 1926, 2.6 per cent, or from 143.5 to 139.8. While foods declined 2.5 per cent in September and October, they fell again almost 4.8 per cent up to January. This group was influenced by dairy products, which fell 13 per cent. Heat and light showed little change. Sundries rose slightly and clothing showed a downward tendency, falling from 173.9 to 171.1. Rent rose from 89.0 to 91.1.

Switzerland

COST OF LIVING.—The official cost of living figures for food, fuel and clothing which were calculated formerly under three separate categories were recently combined into a single index with the addition of an index number of rents. Figures of the new index were not available.

New Zealand

WHOLESALE PRICES.—The index number of the Census and Statistics Office, on the base 1909-13 = 100, was 1812 for December, a decline of only one point from the revised index for November. There were declines in agricultural produce and the group wool, hides, tallow, butter and cheese, and advances in the group general merchandise and pottery, and the group building materials. Other groups showed only slight changes.

RETAIL PRICES.—The official index number of retail prices of food in twenty-five towns declined about one per cent during December to 165.1, on the base 1909-13 = 100. Groceries advanced while dairy produce and meat showed declines.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, 1913 = 100, registered 156.0 for January compared with 156.2 for December, 1925. Farm products and foods declined slightly below the level of December. Lower prices were reported for clothing materials, metals, chemicals, drugs and house furnishing goods. In miscellaneous commodities there was a decline due to falling prices of crude rubber. Fuels and building materials were higher.

Bradstreet's index number of commodity prices (showing the cost of a list of 106 commodities) was $13.3985 on March 1, showing a downward trend for the third consecutive month. The decrease was one of 2.1 per cent from $13.7229 for February 1. Nine groups, including breadstuffs, live stock, provisions, hides, textiles, coal and coke, naval stores, building materials and miscellaneous products showed decreases, while four groups, including fruits, metals, oils and chemicals and drugs, showed increases. The increase in metals was due to the higher price of tin, and the fall in the miscellaneous group was caused by a drop in rubber.

COST OF LIVING.—The index number of the Special Commission on the Necessaries of Life for the cost of living in Massachusetts, showed a slight decrease for January, 1926, as compared with the previous month, being one point lower at 167.0. The figures for the elements of the budget were as follows: foods having declined 2.5 per cent and clothing 1.1 per cent, while fuel and light increased 8.1 per cent; food, 151.8; clothing. 184.5; shelter, 170.0; fuel and light, 214.6; sundries, 172.2.

FATAL INDUSTRIAL ACCIDENTS IN CANADA IN 1925

THE accompanying tables record the fatal accidents to workpeople in Canada in the course of their employment during the calendar year 1925, analysed according to causes, provinces, and months, as well as by industries. Quarterly statements giving a list of the accidents occurring during the period covered and certain particulars as to each appeared in the LABOUR GAZETTE for May, August and November, 1925, and Febraury, 1926.

The record is compiled from reports from the following governmental authorities:—

Dominion: The Board of Railway Commissioners and the Explosives Division of the Department of Mines, Ottawa.

Nova Scotia: the Workmen's Compensation Board, and the Department of Public Works and Mines.

New Brunswick: the Workmen's Compensation Board.

Quebec: the Department of Public Works and Labour, and the Bureau of Mines.

Ontario: the Factory Inspector, the Workmen's Compensation Board, the Ontario Railway and Municipal Board.

Manitoba: the Bureau of Labour and the Workmen's Compensation Board.

Saskatchewan: the Bureau of Labour.

Alberta: the Workmen's Compensation Board.

British Columbia: the Department of Mines and the Workmen's Compensation Board.

Reports were also received from the Algoma Central and Hudson Bay Railway, the Algoma Steel Corporation Limited, and the Lake Superior Paper Company, as well as from correspondents of the LABOUR GAZETTE resident in the principal industrial centres throughout Canada. Industrial accidents reported in the press are also included in the record, after inquiry has been made to avoid duplication, etc.

The total number of fatal accidents recorded during the year was 1,044, the industries showing relatively large numbers being as follows: transportation 257, or 24.6 per cent; mining 166, or 15.9 per cent; manufacturing 161, or 15.4 per cent; logging 139, or 13.3 per cent; construction, 130, or 12.4 per cent; agriculture 93, or 8.9 per cent. Most of the accidents in agriculture are recorded from press clippings, and while it is not known to what extent the accidents in this industry are covered, it is believed that in this respect the record is fairly complete.

The record for all industries shows a decrease during the year 1925, most of the decrease occurring in the logging industry, and appearing to be due to a decline in the number employed in this industry during 1925. Decreases also appeared in transportation and in construction.

The classification of fatal accidents according to causes shows that the largest number, 257, came under the category "by moving trains and vehicles," and that 93 of these were caused by persons being struck or run over by, or crushed by or between, cars and engines. Derailments and collisions accounted for 26 accidents, and automobiles and other power vehicles for 30. Animal drawn vehicles and implements caused 27, and water craft caused 43 fatalities. The next most numerous group was that of accidents caused by falling objects. Of these there were 179, 59 being caused by falling objects in mines and quarries, 36 being in coal mining, 19 in metalliferrous mining and 4 in non-metallic mineral mining and quarrying not elsewhere specified. Objects falling from elevations, loads, piles, etc. caused 30 accidents. Falling trees caused the death of 53 persons, of which 41 occurred in the logging industry and 8 in agriculture. Falls of persons accounted for 151 accidents, the largest number of these being 67 falls from elevations, of which 37 were in the construction industry. The group of causes designated "dangerous substances" accounted for 127 accidents, 57 being caused by electric current and 38 by explosive substances. Of the 106 accidents attributed to "other causes," 43 were from drowning, with no particulars available, 20 of these being in the logging industry. Drowning accidents in fishing and trapping were classified under "water craft" where possible.

The classification of fatal industrial accidents under provinces shows the largest number to have taken place in Ontario, which had 410, including 90 in transportation and public utilities, 83 in manufacturing and 82 in construction. British Columbia was second with 204, which included 98 in logging and 50 in transportation and public utilities. Quebec had 178 and led the other provinces in accidents in water transportation.

The table of fatalities by months shows the largest number of accidents to have occurred in October, in which there were 132, with large numbers in November, September and May. In both agriculture and transportation the numbers were larger in the autumn months. The smallest number occurred in February, namely, 63. This table gives some information regarding the estimated number of employees in certain of the industries.

TABLE I—FATAL INDUSTRIAL ACCIDENTS IN 1925, BY

CAUSES	Agriculture	Logging	Fishing and Trapping	Mining, Non-ferrous Smelting and Quarrying	Metalliferous Mining	Coal mining	Non-metallic mineral mining and quarrying, n.e.s. *These fatalities include accidents to fishermen and seamen outside Canadian waters. For 1924 there are included 8 members of the crew of a schooner drowned between Louisburg, Nova Scotia and Newfoundland, early in January; 3 fishermen drowned during a storm at the Portlock Banks, Alaska, on March 3; a fisherman drowned at The Banks, Newfoundland, on November 11, and the captain of a fishing schooner drowned in a wreck near Gloucester, Massachusetts, on August 28. For 1925 there are included a seaman on a Canadian steamer at Antwerp, Belgium, accidentally killed by machinery on March 5; 2 fishermen drowned at sea, in the Atlantic Ocean, when their dory was swamped, on March 18; and the captain of a schooner who was struck by a boom and killed near Merscheau Island, Newfoundland, on July 29.

*The figures in this column for Manufacturing and its various trades are for 1923, for other industries 1924, annual census of Industry.

MATERNITY COSTS IN NEW YORK CITY

A recent issue of *The Statistical Bulletin* of the Metropolitan Life Insurance Company, New York, gives some interesting information as to the cost of childbirth in New York City. The writer points out that the cost of being born varies greatly with the economic status of the parents and that even among people of one class, say those of moderate or slender means, there will always be much divergence occasioned by racial tradition, by wisdom, or lack of it, in apportioning expenses among the several items of the family budget. Naturally, costs will depend upon the type and quality of the maternity service selected; upon whether the woman is attended by an obstetrician, a general practitioner, or a midwife; upon whether she goes to a hospital or is confined at home.

According to official figures for New York City in 1924, there were 130,436 births registered in that year, of which 80 per cent were attended by physicians; less than 4 per cent of those so attended were taken care of by the outdoor hospital departments; approximately 50 per cent of them took place in institutions, and the remainder occurred in the homes of the patient under the care of a private physician. The least expensive type of maternity care is that provided by the outdoor hospital service maintained by a few hospitals, for which sometimes a flat rate of $10 is charged and sometimes the service is absolutely free. This method of treatment, however, is apparently diminishing in popularity, while hospitalization of maternity cases is steadily increasing.

It is stated that the minimum average maternity cost, when care is given in the hospital ward, is around $150. This estimate allows $50 for hospital expenses, $70 for service (hiring a working housekeeper), $25 for the baby's layette, and $5 incidentals, such as hospital fees for pre-natal care, the cost of which is only 25 cents for each clinic visit. For a more adequate type of hospital service, the writer states that a minimum figure will be around $250, the extra $100 providing care in a semi-private hospital room instead of in a ward. In normal ward cases, delivery is given by senior interns under the direction of the house or visiting staff; in abnormal cases, the visiting physician does the actual work himself. In the semi-private rooms, on the other hand, service is given by one of the staff obstetricians and the patients need not attend the public pre-natal clinics, but are entitled to private consultation with the staff doctor who is to attend them. The average hospital bill for such service is about $150. This is probably the type of treatment most commonly selected by families in the $2,500 income class. Instead of treatment by the house obstetrician, the semi-private patient can have her private doctor take care of her at approximately the same cost.

Costs for home confinement on a scale comparable in quality to ward treatment will usually run somewhat higher than the minimum hospital rate, if the same amount of service is employed. However, allowing as a bare minimum, $50 for the doctor's fee, costs can, perhaps, in this case also, be kept down to $150. For an additional $100 a physician charging higher fees can be called in and more adequate nursing care given. These figures must be understood as representing actual minimal costs as far as they could be ascertained. It is realized that in not a few instances, even among persons in very moderate circumstances, the medical costs run up to very high figures. Those who insist on the service of a skilled obstetrician must be prepared to pay much larger fees. Two hundred dollars is considered a minimum fee for the service of a specialist and the other necessary items then mount proportionately higher to a total of not less than $500. Among the well-to-do, the resulting costs probably do not fall much below $1,000. There are many confinements at which no doctor is in attendance. In 1924, close to 20 per cent of all births in New York City were attended by midwives. In 1918 it was found that over 87 per cent of all mothers in Italian and Slavic families were delivered by midwives.

It is believed that $35 is the average fee which a midwife receives at the present time, and there is rarely any expenditure for nursing service, hence costs run lower than in the case of treatment by a physician. According to the writer of the article, it costs from $200 to $300 to be born, and it is undoubtedly the anticipation of greatly increased expenses, the sudden demands made on the family exchequer when a child is born and for some time after, that causes many people of limited income to favour the policy of the restricted family.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Common law action barred by Workmen's Compensation Act

A COAL MINING COMPANY conducted a mining camp in Alberta in connection with which there was a bakery, situated in a hotel. The baker on leaving the building one evening to go to an entertainment fell into a hole that had been left by the builders in the ground outside the door, and received serious injuries. The Workmen's Compensation Board held that the baker had shown negligence and was not entitled to compensation, and he brought action at common law. The defendant company contended that as the case was one falling under the Workmen's Compensation Act, action at common law was barred by that statute. The trial court held that the accident being due to the plaintiff's own negligence it was not necessary to consider whether or not the right of action was barred. On appeal, the Supreme Court of Alberta denied the plaintiff's right of action. One judge, however, dissented, holding that the plaintiff had established negligence on the part of the company entitling him to damages at common law, that the Workmen's Compensation Act excludes action under common law only when the action is based on the relationship of employer and employee, and that the Board having ruled the workmen's injury noncompensable the court had jurisdiction to deal with the case on the ground of negligence. The dissenting judge held moreover that the Board had come to a wrong conclusion, but that its decision was nevertheless binding on the court.

(Alberta-Robertson versus Blue Diamond Coal Company Limited.)

Compensation Allowable in Same Case for Temporary and for Permanent Disability

A workman received injuries in the course of his employment, resulting in permanent partial disabilities for which he received compensation to the capital value of $1,691. Under the Quebec Workmen's Compensation Act he had the option of receiving annual payments or a lump sum, and he chose a lump sum. He was also entitled to a further amount as compensation for his temporary total incapacity, which was fixed at $452 and the question arose whether the latter amount should be deducted from the amount allowed for permanent partial disability. The Superior Court at Montreal decided in the negative, holding that a workman benefiting under the act has a right to separate and distinct compensation, one for temporary, and the other for permanent partial disability. The capital of the "rents" however, must not under the Act exceed the sum of $3,000.

(Quebec-Cummings versus Canada Sugar Refining Company.)

Nervous Disease Due to Accident Compensable in Quebec

An employee of the Montreal Light, Heat and Power Company developed neurasthenia due to shock from an explosion in the shop. Strictly speaking, nervous disorders do not come under the category of accidents causing temporary or permanent incapacity, as defined in the Workmen's Compensation Act. The Court at Montreal, held, however, that the absence of a wound, in the strict sense of the word, did not disqualify the workman, and allowed him compensation for permanent disability based on a permanent diminution of his earning capacity by five per cent.

(Quebec-Kazenow versus Montreal Light, Heat and Power Company).

Heirs May Recover Indemnity Due Deaceased Workman

A workman who was injured as the result of an industrial accident died within a year of the date of its occurrence. His widow brought action against the employer for the amount that would have accrued to the deceased had he received the amount of indemnity to which he was entitled under the Workmen's Compensation Act. The Court allowed the claim, on the ground that the heirs of a deceased workman may continue an action for compensation for injury, and that they may even initiate an action for the recovery of the amount that might have been due to him at the time of his death.

(Quebec-Dame Brunet versus Paquette).

Question of Payment of "Check-off" for Union Dues to One Big Union

Members of the One Big Union local branch at Thorburn, Nova Scotia, brought action in the County Court in March against officials of the United Mine Workers of America, the Acadia Coal Company and the British Empire Steel Corporation for the return of money alleged to have been "checked-off" by company officials from the pay of members of the One Big Union in the coal mines of Pictou and Cumberland County. The amount claimed was about $13,000. The situation arose when a number of the members of the United Mine Workers left that organization and joined the One Big Union. Mr. Justice Chisholm after hearing the evidence dismissed the action against the individual defendants.

Responsibility of Railway Commission in Regard to Safe Conditions

The driver of a motor truck allowed two boys to ride with him in the closed cab in front of the truck. In crossing a railway track the truck was struck by a train and the two boys were killed. The parents of the boys brought action for negligence under the Ontario Fatal Accidents Act against the truck owner and also against the railway company. The action was first tried with a jury which found negligence on the part of both defendants, the railway being held to have placed the railway crossing sign at a point where it failed to afford reasonable warning to persons approaching the crossing by road. Damages were fixed at $2,500. On appeal being taken the Appeal Court found that jurisdiction to determine the duties of a railway company in all matters not expressly provided for in the Railway Act, 1919, is conferred by the act upon the Board of Railway Commissioners for Canada; and that the Board having issued no order requiring the defendant company to furnish additional protection at the crossing the lack of such further protection did not constitute a breach of duty. The action as against the railway company was therefore dismissed, but judgment was entered against the truck owner for $2,500 with costs.

(Colborne versus Harrop and Toronto, Hamilton and Buffalo Railway Company.)

Illinois Anti-Injunction Statute Held Unconstitutional

The November, 1925, issue of the Labour Gazette noted that the Legislature of Illinois passed a law, effective July 1, 1925, limiting the issue of injunctions in labour disputes. This law provides that "No restraining order or injunction shall be granted by any Court of this State, or by a judge or judges thereof, in any case involving or growing out of a dispute concerning terms or conditions of employment, etc." Shortly after this law was passed, a picketing case came before the Superior Court, Cook County, Illinois. The judge found the defendants guilty of contempt in disregarding an injunction issued in Chicago prior to the enactment of the Anti-Injunction law. He declared this law unconstitutional, being contrary to the State constitution, which lays down the principle that "No person shall be deprived of life, liberty or property without due process of law," and to the similar declaration contained in the Fourteenth Amendment of the Constitution of the United States.

"In the instant case, the legislature has attempted, by statute, to deny to one class of citizens the protection of the courts, while granting it to other citizens under similar circumstances. The right of all citizens to be treated equal, is too fundamental to require a restatement. To classify citizens by occupation and say to one class, that their property may be taken from them or destroyed by another class without compensation or process, is not liberty; it is inviting the tyranny of the mob. These provisions of the Constitution are intended to prevent class legislation, discriminating against some and favouring others; and they are universal in their application to all persons without regard to any differences of race, of colour, or of nationality; and the equal protection of the laws is a pledge of the protection of equal laws."

OLD AGE PENSION SYSTEMS EXISTING IN VARIOUS COUNTRIES

THE purpose of this memorandum is to give information regarding the old age pensions laws which are in force in various countries of the world.

Insurance against incapacity to work, due to old age, has been provided by a number of different methods. Probably the earliest systems were those established by fraternal and benefit societies and trade unions for their members. Schemes for voluntary insurance were later introduced, subsidized in some cases by the state. The British Post Office inaugurated a voluntary insurance system in 1833. Voluntary insurance assisted by state subventions is found in Belgium, France, the Netherlands, Hungary, Italy, New Zealand, Portugal and two of the Swiss cantons. The failure of the voluntary system, even when assisted by public funds, to attract the majority of citizens led, in many countries, to the adoption of compulsory insurance laws. The latter laws fall into two classes: those under which the beneficiary makes a contribution to the pensions fund and those under which pensions are paid from public moneys. The former type is to be found in Argentina, Belgium, France, Czecho-Slovakia, Bulgaria, Jugo-Slavia, Roumania, Germany, Sweden, Italy, Portugal, Luxemburg, Greece, the Swiss canton of Glarus and Austria. Non-contributory systems are in force in Australia, New Zealand, Uruguay, Spain, Denmark, Norway and some states of the United States of America. The British law as amended in 1925 combines the contributory and non-contributory systems.

It will be noted that many of the laws are of very recent date and in some instances replace earlier enactments, as is the case in Belgium and Denmark. Czecho-Slovakia, which passed an old-age pension law in 1924 was formerly under the Austrian old age pensions law. Similarly the Austrian and Serbian laws governed portions of what is now Jugo-Slavia.

In the present survey, no reference is made to the voluntary systems which have been established in various countries permitting of the purchase and sale of annuities to individuals who desire to make this form of provision for their old age. In most countries the sale of annuities is carried on by the state and to some extent by insurance companies. In Canada, legislation authorizing the sale to individuals of Government annuities for old age, has been in effect since 1908; the Government Annuities Act in question is administered by the Department of Labour.

Before dealing with the systems of old age pensions existing in other countries, reference may here be made to the attention which the subject of old age pensions has received in the Parliament of Canada during successive sessions. In the session of 1906-1907, a resolution was introduced declaring that the subject of improving the condition of the aged deserving poor should receive the early and careful attention of the Government and of Parliament. This motion was debated, but was not pressed to a vote. In the years 1908, 1912 and 1913, motions were introduced recommending the appointment of special committees to enquire into an old age pension system for Canada. These committees were duly appointed and reported. In 1914, a resolution in favour of the adoption of an old age pension system for Canada was moved in the House of Commons, but the debate was not concluded. In 1922 the House of Commons adopted a resolution in the terms following: "That in the opinion of this House the Federal Government should consider the advisability of devising ways and means for the establishment of a system of old age pensions in Canada." In 1924 a special committee of the House of Commons was appointed, on motion of the Prime Minister, to make an enquiry into an old age pension system for Canada. The work of this committee was continued also during the session of 1925. Shortly after the opening of Parliament in January, 1926, it was announced by the Government leader in the House of Commons that it was the intention of the Government to submit to the House a bill respecting old age pensions based on the recommendations of the Parliamentary Committee which sat in 1924. The recommendations of the Parliamentary Committee of 1924 are as follows:—

1. That an old age pension system be established at the earliest possible date for deserving indigent persons of seventy years of age and upwards.

2. That applicants for pensions must be British subjects of at least twenty years' residence in Canada, or naturalized subjects of at least fifteen years' naturalization and twenty-five years' residence.

3. (*a*) That the maximum rate of pension be twenty dollars per month which will be lessened by private income or partial ability to earn;

(*b*) That one-half the amount of pension payable be borne by the federal government; the other half, by the provincial governments of such provinces as express by legislation their desire to adopt the system—the cost of administration to be borne by the provincial governments."

Mention may also be made here of the fact that in the Treaties of Peace following the conclusion of the Great War there was a reference made to the desirability of proper provision being made for old age. The reference in question occurs in the preamble to

Part XIII of the Treaty of Versailles as follows:—

"Whereas the League of Nations has for its object the establishment of universal peace, and such a peace can be established only if it is based upon social justice;

"And whereas conditions of labour exist involving such injustice, hardship and privation to large numbers of people as to produce unrest so great that the peace and harmony of the world are imperilled; and an improvement of those conditions is urgently required; as, for example, by the regulation of the hours of work, including the establishment of a maximum working day and week, the regulation of the labour supply, the prevention of unemployment, the provision of an adequate living wage, the protection of the worker against sickness, disease and injury arising out of his employment, the protection of children, young persons and women, *provision for old age*, and injury, protection of the interests of workers when employed in countries other than their own, recognition of the principle of freedom of association, the organization of vocational and technical education and other measures;

"Whereas also the failure of any nation to adopt humane conditions of labour is an obstacle in the way of other nations which desire to improve the conditions in their own countries;

"The High Contracting Parties, moved by sentiments of justice and humanity as well as by the desire to secure the permanent peace of the world, agree to the following:"

In the following analysis of old-age pensions legislation, the British Empire is dealt with first followed by foreign countries in alphabetical order. The amounts given in brackets as the Canadian equivalents of foreign denominations are based on the exchange values of foreign currencies at par.

Great Britain

The Old Age Pensions Act of 1908 established a non-contributory system of pensions. This Act was amended in 1911, 1919, 1924 and again in 1925, the last amendment providing for contributory pensions for certain classes of persons.

Qualifications.—Under the Old Age Pensions Acts 1908-1924, a person must be at least seventy years of age and a British subject of ten years standing in order to qualify for a pension. If a natural born British subject, he must have resided in the United Kingdom for at least twelve years in the aggregate since attaining the age of fifty years, and if not a natural born British subject, for an aggregate of twenty years since reaching fifty years of age. An inmate of a workhouse or other poor-law institution is disqualified, as is also any person in receipt of an income in excess of £49 17s. 6d. ($242.72) per annum.

The Act of 1925 provides for contributory pensions payable to persons between the ages of sixty-five and seventy years who have been insured for not less than five years and have paid at least 104 contributions. A further condition is that the insured person must have been continuously resident in Great Britain for at least ten years prior to attaining the age of sixty-five, and his last employment, excluding temporary employment, must have been in Great Britain. Every person in receipt of a pension under this scheme will on reaching the age of seventy be entitled to an old age pension under the Old Age Pensions Acts 1908-1924, regardless of means, residence or nationality.

Pensions.—The amount of the pension under the 1908-1924 Acts varies with the means of the pensioner, from 10s. ($2.43) per week for one whose income is less than £26.5s. ($127.75) per annum, to 1s. (24c.) per week in the case of a claimant with a yearly income of £47.5s. ($229.95), to the limit of £49.17.6 ($242.72). In the calculation of means, the yearly value of the first £25 ($121.67) of capital value is excluded; that of the next £375 ($1,825) of capital value is taken to be one-twentieth of the capital value, and that of capital value in excess of £400 ($1,946.67) is taken to be one-tenth of the capital value. No account is taken of sickness benefit, or of the value of furniture or personal effects.

The pensions payable to persons between sixty-five and seventy years of age under the contributory scheme of 1925 is 10s. ($2.43) per week to insured men and women, and 10s. per week to wives between the ages of sixty-five and seventy of insured men who are themselves entitled to pensions. A wife who has reached the age of seventy years when her husband becomes entitled to a pension may herself receive a pension under the Acts of 1908-1924 without application of the means, residence and nationality tests. Special provision is made for widows and children of insured men who died before the 1925 law came into operation and also for insured persons who have reached the age of seventy before the date on which pensions are payable under the scheme.

Pension Fund.—The expenses incurred under the Old Age Pensions Acts 1908-1924 are met by funds from the Treasury. The cost of pensions under the 1925 Act is covered by contributions from the employer and the insured plus a state subsidy. The weekly contribution for a man is 9d. (18c.)—of which 4½d. (.09c.) is paid by the insured. For a woman the employer contributes 2½d. (.05c.) and the insured 2d. (.04c.) making 4½d. (.09c.) in all.

Administration.—Forms for claims are furnished to applicants by postmasters who also make the payments. The claim is referred to the local pension committee and investigated and reported upon by a pension officer appointed by the Treasury. The central authority is now the Ministry of Health, to which on its formation in 1919 were transferred the powers and duties of the Local Government Board which formerly administered the

Act. The Minister decides appeals and, with the assistance of the Treasury and the Postmaster General, makes regulations for carrying out the provisions of the Acts. Pensions are paid through the Post Office.

The 1925 Act provides for administration of the scheme by the Minister of Health with the assistance of local authorities. Claims for pensions are to be made to the Minister. Pensions are paid in the same manner as under the older Acts.

The total number of persons in receipt of old age pensions on the 31st of March, 1922, was 1,029,367—366,255 to men and 663,112 to women. 93.2 per cent of the pensions were at the maximum rate of 10s. ($2.43) per week. The number of pensioners who were reported to have died during the year was 114,413. The total amount paid in pensions rose from £8,468,000 ($41,210,933.33) in the year ending 31st March, 1910, to £26,009,500 ($126,579,566.66) in the year ending 31st March, 1922.

Australia

The Invalid and Old Age Pensions Act was passed in 1908 and amended in 1916, 1919, 1920 and 1923.

Qualifications.—Pensions are payable to men at the age of sixty-five years and to women at the age of sixty years. A man who is permanently incapacitated may, however, begin to receive a pension at sixty years. A pensioner must have resided in Australia continuously for at least twenty years, but continuous residence is not deemed to have been interrupted by occasional absence not exceeding in the aggregate one-tenth of the total period of residence. Evidence of good character must be produced and the desertion, within the previous twelve months, of consort or children under 14 years of age disqualifies an applicant. A pensioner may not possess property in excess of £400 ($1,946.67) or in any manner deprive himself of property in order to qualify for a pension. His aggregate income, inclusive of pension, must not exceed £78 ($379.60) per annum. Exception is made in the case of a permanently blind person whose total income, including pension, together with the income of the pensioner's wife or husband, may reach £221 ($1,075.53) per annum, or such other amount as is declared to be the basic wage for the district in which he or she resides. Pensions to members of the forces in the Great War or their dependents, and payments from any trade union, friendly society, provident society or other association are not, for the purposes of the Act, treated as income. The value of the pensioner's home is deducted from the value of accumulated property.

Pensions.—The Commissioner, or Deputy Commissioner appointed under the Act, is empowered to determine a reasonable amount having regard to all circumstances of the case, but in no instance may the pension exceed £45 10s ($221.43) per annum. The allowance is reducible by £1 ($4.87) a year for every complete £10 ($48.67) by which the net capital value of the property owned by the pensioner exceeds £50 ($243.33).

Administration.—Claims are received and registered by registrars, who number about seven hundred, and they are investigated by magistrates. At each of the State capitals there is a Deputy Commissioner and at Melbourne a Commissioner and Assistant Commissioner charged with the administration of the Act.

In the year ending June 30, 1925, there were 117,516 old age pensioners, or 200.08 per ten thousand of the population of whom 93,466 or 79.53 per cent were in receipt of the maximum pension of £45 10s. ($221.43) per annum. The total liability for the year was approximately £5,110,612 ($24,871,645.07), the cost of administration covering both invalid and old age pension was £94,486 ($459,831.87) including £36,599 ($178,115.13) paid to other government departments.

New Zealand

The Pension Act of New Zealand enacted in 1913, is a consolidation of previous laws. It was amended in 1914 and 1924, and the amount of the allowance was increased by the Finance Act, 1917.

Qualifications.—Pensions are payable to men at the age of 65 years and to women at the age of sixty years, unless the applicant is a parent of two or more dependent children under fourteen years of age, in which case the age limit is reduced by five years. The pensioner must have lived in New Zealand continuously for twenty-five years, but continuous residence is not deemed to be interrupted by absences not exceeding two years. An additional six months' period of absence is allowed for every additional year of residence, in excess of the twenty-five years immediately preceding the date of application, provided that the applicant has lived in New Zealand during the twelve months prior to the date of application. In the case of seamen, continuous residence is not interrupted by absences on board a ship which is registered in New Zealand, provided that the applicant establishes the fact that his home is in New Zealand. Imprisonment for a term of five years during his twenty-five years of residence

disqualifies an applicant, as does also imprisonment during the past twelve years for a term of four months or on four occasions for an offence punishable by twelve months' imprisonment. The law also excludes from its benefits any one who has not lived a sober and reputable life during the past year or who has deserted wife (or husband) and children at any time during the past twelve years. Aliens and subjects who have been naturalized less than a year are disqualified, as are also Asiatics, whether naturalized or not, and Maoris who receive votes other than pensions. The yearly income of the applicant if single must not exceed £78 ($379.60) or if married £130 ($632.67). The accumulated property may not exceed £390 ($1,898) and no person may deprive himself of property in order to qualify for a pension. Furniture and personal effects are excluded when computing income, and the pensioner's house is exempt up to a maximum value of £520 ($2,530.67). Income includes board and lodging up to £26 ($126.53) per annum but does not include: benefit from a friendly society; money received from the sale or exchange of land or property; capital expended for the benefit of the applicant or his consort; property inherited from a deceased husband or wife; money received from any fire insurance. In computing income, additional exemption is granted for any one of the following: pensions under the War Pensions Act, 1915, or the Miners' Phthisis Act; charity or gifts from relatives up to £52 ($253.07) per annum; other money not exceeding £39 ($189.80) in any year.

Pension.—The maximum pension granted under the Act is £39 ($189.80) per annum, or 15s. ($3.65) per week, but an additional allowance, not exceeding 2s. 6d. (61c) per week is provided for pensioners who have no accumulated property and no income other than the pension. A pensioner who served in the New Zealand contingent in the South African War is entitled to receive an additional amount of not more than 5s. ($1.22) per week. His total income from all sources may not exceed £91 ($442.87) per annum. The pension is reducible by £1 ($4.87) for every complete £1 ($4.87) of income over £52 ($253.07) for every £10 ($48.67) of accumulated property and for every year or part of a year by which the age of the applicant is less than 65 years.

Pension Fund.—The entire cost of pensions is borne by the state.

Administration.—The country is divided into seventy-three districts each in charge of a pension registrar. Claims are investigated by the magistrates, who are empowered to grant or refuse applications. The Commissioner of Pensions at Wellington administers the Act and is responsible to the Minister of Finance.

During the fiscal year ending March 31, 1925, there were 22,062 persons, or 1.59 per cent of the population who were in receipt of pensions. The amount expended during the same period was £850,795 ($4,140,535.67), or approximately £38 11s. ($187.61) per pension.

Argentina

An Act of November, 1923 provides for compulsory insurance against old age.

Qualifications.—Insurance is compulsory for all wage-earners and salaried workers in the mercantile marine, industrial establishments and commercial houses, as well as for journalists and those employed in printing and publishing houses. Wage-earners and salaried employees in benefit societies and trade unions may come under the Act on condition that they pay the employer's contribution. Persons under eighteen years of age and home workers are exempt.

Pensions.—The amount of the pensions and conditions upon which they are granted are fixed by the management committee.

Pension Fund.—The burden of insurance is borne entirely by the employers and the workers, without the aid of a state subsidy. The insured person contributes a sum equal to five per cent of the monthly wage up to a maximum wage of 1,500 pesos ($1,447.14), together with an amount equal to the first month's wages or salary paid him on his entry into his employment. This payment may be made in ten monthly instalments. The insured also pays the first monthly increment of wage received by him. The employer pays a monthly contribution equal to five per cent of the total wages paid his permanent staff, wages in excess of 1,500 pesos ($1,447.14), being left out of account.

Administration.—The administration of the fund is entrusted to a Board of Management on which the government, employers and workers are represented.

Austria

A compulsory system of old age insurance was provided by an Act effective January, 1909, and amended in 1914 and 1920.

Qualifications.—Only salaried employees fall within the scope of this law. Salaries must range from 600 krone ($121.80), to 18,000 krone ($3,654), and contributors must pay for forty years or have paid for five years on

reaching the age of sixty-five. In the case of women these figures are thirty-five and fifty-five respectively.

Pensions.—The amount varies with the number of contributions and the salary, the minimum of the lowest class being 180 krone ($36.54), and the maximum of the highest class, 900 krone ($182.70). The amendment of 1920 increased the maximum amounts for each class, that for the highest class being now 5,400 krone ($1,096.20).

Pension Fund.—Before the war, monthly premiums ranged from 6 krone ($1.21), to 30 krone ($6.09). These were increased in 1920 and the employed compelled to pay two-thirds of the premium for the four lower classes, and one-half the premium in the next two classes. In case of an income of over 7,200 krone ($1,461.60), the insured person pays the whole premium.

Administration.—There are a central pension office and local branches. There is also a compulsory old age pension fund for the government mining employees which was established in 1854.

Belgium

Belgium established a non-contributory system of old age pensions by an act dated August 20, 1920, which is still in force for those persons who were born before October 1, 1861. A new act dated December 10, 1924, was put into effect on January 1, 1926, but does not apply to salaried workers who will come under a special act of March, 1925, which becomes operative on January 1, 1927, but which from January 1, 1926, will bring salaried workers into the general scheme.

Qualifications.—Insurance is compulsory for all persons who work for an employer at an annual remuneration not exceeding 12,000 francs ($2,316.00). This maximum is increased 1,000 francs ($193.00) for each dependent child under sixteen years of age. State and municipal employees, miners and others who are provided for by special laws are exempt. Foreigners working in Belgium are subject to the provisions of the law, but are not entitled to the benefit of the state and employers' contribution unless their country of origin gives reciprocal benefits to Belgiums.

Pensions.—Except in the case where an insured person dies unmarried or a widower, the contribution of the state constitutes either an old-age annuity of 240 francs ($46.32) for the insured, or a similar annuity for the wife if she has reached the age of 65 years. Before that time the maximum survivors' annuity is fixed at 120 francs ($23.16).

The minimum old age pension is 720 francs ($138.96) of which 480 francs ($92.64) is paid from the fund formed by the workers' and employers' payments, and 240 francs ($46.32) from the contribution of the state. One-third of the widows' pension of 360 francs ($69.48) is paid. An annuity of 120 francs ($23.16) for each child under 16 years of age is payable to the widowed mother or, in case of her death, to the guardian of the child. The widow's pension is increased to 480 francs ($92.64) after she has passed the age of 65 years.

Pension Fund.—Unmarried boys under eighteen years of age, and girls and women contribute one franc ($.193) per month and all other persons contribute three francs ($.584). An equal amount is paid by the employer. The state contribution is on a sliding scale according to the age of the person insured with a maximum annual payment of 288 francs ($55.58) per person.

Administration.—Contributions of employers and insured persons are deposited in the General Savings and Pension Fund, which is responsible for the management of the capital and the constitution of the pensions. Regulations for the administration of the act must be approved by the Ministry of Industry, Labour and Social Welfare. An annual subsidy to cover expenses is granted to approved societies whose object is to affiliate their numbers to the General Savings and Pension Fund.

Bulgaria

By an Act of March 6, 1924, compulsory insurance against old age was established.

Qualifications.—All wage earners and salaried employees without distinction of age, sex or remuneration come under the law, the only exceptions being made for those covered by special acts, such as civil servants. Small employers, agriculturists and non-salaried intellectual workers have the option of insuring themselves. Foreign salaried employees are insured if their country of origin gives reciprocal benefits to Bulgarians. Pensions are granted to persons sixty years of age who have paid 1,040 weekly contributions.

Pensions.—Pensions are composed of a fixed portion of about 30 per cent of the annual remuneration corresponding to the wage class to which the insured person belonged when he retired, and a variable portion proportionate to the number of weekly payments made over and above 156. Contributions of insured persons who paid 156 weekly payments and died without receiving a pension revert to the nearest relatives of the deceased if the income of the said relatives does not exceed 6,000 levas ($1,158.00).

Pension Fund.—Expenses are covered by a three-fold contributed by the insured, the employer and the state. Each contributes an equal amount which ranges from 1.66 per cent to 1.11 per cent of wages.

Administration.—The act is administered by the Social Insurance Office established in the Ministry of Commerce, Industry and Labour.

Chile

An act of 1924 establishes a system of compulsory insurance against old age. Non-manual workers, agricultural labourers and domestic servants are exempt. Workers contribute two units to the pension fund, employers three units and the state one unit.

Czecho-Slovakia

An Act of November, 1924, provides for compulsory insurance against old age for all wage earners except those who already enjoy the benefits of the schemes already in existence. These include one covering salaried employees passed in 1906 and amended in 1914. and one for miners enacted in 1922.

Qualifications.—The law of 1924 covers all Czecho-Slovak subjects including apprentices, home workers and seamen. Insured persons become entitled to pensions at the age of sixty-five years after paying 150 weekly contributions, at least thirteen of which must have been paid in the two years preceding receipt of benefit. In order to benefit under the former laws for salaried employees pensioners must have contributed for forty years in the case of men and for thirty-five years in the case of women, membership to begin at eighteen years of age and income to be not less than 600 krone ($121.80) or more than 3,000 krone ($609.00).

Pensions.—The pension is composed of a basic pension fixed on a standard basis for all beneficiaries at 500 Czecho-Slovak crowns per annum with increases amounting to 3.50 crowns for each monthly payment made by the insured person. Thus an insured person who has paid contributions without interruption for thirty-five years will receive an annual pension of 1,970 crowns. Bonuses are payable for dependent children under seventeen years of age. Contributions and pensions for salaried workers under the 1906 and 1914 laws are similar to those in Austria.

Pension Fund.—Under the 1924 law, workers are divided into four classes paying from 4.30 (.87c.)–8.80 krone ($1.78) a week in contributions payable one-half by the worker. A subsidy is given by the state.

Administration.—The 1924 Act is administered by the Central Insurance Institution at Prague.

Denmark

Denmark was the first country to establish a non-contributory system of old age pensions under a law passed in 1891. In 1922, a new act was passed.

Qualifications.—Every Danish citizen who is domiciled in the country, or is employed on a Danish vessel for five years, is entitled to an old age annuity when he has attained the age of sixty-five years if he can fulfil certain general conditions which guarantee respectability. Under special circumstances pensions may be paid from the age of sixty years. Persons who have been in receipt of poor relief during the three years previous to their applications are not eligible.

Pensions.—The amount of the pension is fixed in consideration of the place of residence, sex and matrimonial status of the pensioner, and in such a way that the pensioner receives about 10 per cent additional for each year that he postpones enjoyment of the annuity between the sixty-fifth and sixty-eighth year. In Copenhagen, the fixed amount for a married couple who have both attained the age of sixty-five years is 1,008 kr. ($270.11) and for a single man 552 kr. ($147.92). A cost of living bonus is also granted and communal authorities may make an allowance for medical treatment, medicine, etc. The full amount of the annuity is only paid to persons whose annual income does not exceed half the amount of the fixed annuity plus 100 kr. ($26.80).

Pension Fund.—The pensions are paid by the municipalities, seven-twelfths of the expenses being borne by the state.

France

The present Old Age Pensions law of France was enacted in 1910 and amended in 1912 and 1915.

Qualifications.—The age at which pensions are payable was reduced from sixty-five to sixty years by an amendment in 1912. In case of invalidity, pensions may be drawn at the age of fifty-five with a proportionate decrease in the amount of the pensions and of the state subsidy. If disability is total and permanent, the pension may be immediately liquidated.

All wage-earners earning annually less than 3,000 francs ($579), must contribute to the fund and thirty annual contributions must be

made in order to qualify for a full pension, except in the case of mothers, in which case one annual payment may be deducted for each child, and in the case of men performing at least two years' military service when the minimum is twenty-eight annual contributions. Seamen, miners and railway workers are excluded from the Act, these groups having special systems of their own. An autonomous Pension Fund for miners was created by a law passed in 1914. Mine owners must pay into the fund monthly four per cent of their employees' wages in order to form a basic capital and, in addition, the regular contribution is made, one-half by the employers and one-half by the miners. The maximum contribution, which under the 1914 law was not to exceed one per cent of wages, was increased by an amendment in 1923 to two and one-half per cent, the contribution of the state being not less than one per cent of the amount of wages paid. Another amendment also in 1923 extends the provisions of the law to include those employed in industrial undertakings administered by mine owners which are ancillary to the mines and carried on in their vicinity.

Pensions are payable at the age of fifty-five years. Voluntary insurance is provided for artisans, casual workers, small employers of labour, for employees having an income between 3,000 and 5,000 francs ($579 to $965), and, in addition, for share-tenants, independent farmers, and the wives and widows of insured persons.

Pensions.—The amount of the pension depends on the age at which the recipient became a wage-earner, the pension of a man beginning to work at the age of twelve (as permitted by French law) and working till the age of sixty-five being 400.19 francs ($77.24) in the case of a woman the pension would be 325.05 francs ($62.73). These estimates are based on the Act of 1910 by which the age of retirement was fixed at sixty-five years, and the government contribution at 60 francs ($11.58). When the age limit was reduced to sixty years the amount granted by the state was increased to 100 francs ($19.30) The pension would, therefore, remain at approximately the same amount. In December, 1915, the maximum annuity attainable under the voluntary insurance system was raised from 1,200 to 2,400 francs ($231.60 to $463.20).

Pension Fund.—Contributions are made by the wage-earner and the employer in equal amounts. The employer makes the contribution but is permitted by the law to deduct one-half from the wages of the employee. It is stated that in actual practice the custom is growing for employers to bear the entire cost, a fact which would influence the amount of wages paid. The state contributes 100 francs ($19.30), directly to the pension after it has matured, an additional one-tenth being granted to those persons of either sex who have brought at least three children to the age of sixteen. No state subsidy is given in cases of less than fifteen annual payments and where contributions have been made for more than fifteen but less than thirty years, 3.33 francs (64 cents) are granted by the state for each year of contribution.

Under the compulsory system, adult men contribute annually 9 francs ($1.74); adult women, 6 francs ($1.16), and minors 4½ francs (87 cents). For voluntary insurance, a range of 5 to 18 francs is permitted (97 cents to $3.47).

Administration.—The cost of administration is borne by the state. Insurance may be effected through the previously existing national old age retirement fund or through the mutual benefit societies or unions of the latter or through the funds of private establishments, provided that such agencies are under government control.

On April 8th, 1924, the Chamber of Deputies adopted a Social Insurance Bill introducing compulsory insurance for more than 8,000,000 wage earners and benefits for more than 13,000,000 persons. It will entail an estimated annual expenditure of over three milliard francs ($579,000), which will be borne by the insured persons, the employers and the state. This bill must be brought before the Senate and financial provision made before it becomes law.

Germany

The Old Age Insurance Act passed in 1889 by Germany was the first enactment providing for a national system of compulsory old age insurance. This Act and its amendments were consolidated in 1899.

Qualifications.—The original Act fixed the pensionable age at seventy years, but an Imperial law of 1916 reduced the eligible age to sixty-five years. In order to qualify for an old age pension, 1,200 weekly contributions must have been made. An invalidity pension is obtainable by all persons unable to earn one-third of the normal wages in the same occupation and locality.

All wage earners over sixteen years of age in industry, transportation, commerce, agriculture and domestic service and salaried employees earning annually less than 2,000 marks ($476) must insure. Artisans, casual workers, small employers of labour, employees having an income over 2,000 but less than

3,000 marks ($714), share-tenants, independent farmers and the wives and widows of insured persons may avail themselves of the system.

Pensions.—The state contributes 50 marks ($11.90), to each pension which varies with the amount of wages received during the lifetime of the pensioner, the maximum pension, including the state contribution, being 230 marks ($54.74), and the minimum, 110 marks ($26.18).

Pension Fund.—The system of contributions is more complicated than in France. Wage earners are divided into five groups and the weekly contribution increases with the wages, the amount contributed weekly since 1917 by persons receiving less than 350 marks ($83.30), being 18 pf. (4.1 cents), and the weekly premium on wages over 1,150 marks ($273.70), being 50 pf. (11.9c.). Of these amounts the employer and employee each contribute one-half, the employer being responsible for the payment. The state adds 50 marks ($11.91). The rate of contribution was slightly increased in 1911 when pensions for widows and orphans were added to the scheme, and in January, 1917, a further increase was rendered necessary by the reduction in the age limit from seventy to sixty-five years.

Administration.—The state bears the cost of administration. There are special institutions for administering the law with regard to employees in mines, navigation and on the railroads. These bodies were in existence at the time of the passing of the Act and their pensions are on a more liberal scale. There are about fifty large territorial divisions each with an administrative office which must accumulate a reserve fund, the limits of which are fixed by the law.

Greece

An Act respecting the Compulsory Insurance of Wage-Earners was passed in July, 1922, but will only become operative by Royal Decree.

Qualifications.—Wage earning and salaried employees and servants of both sexes employed for remuneration are compulsorily insured. Voluntary insurance is provided for persons engaged in home industries alone or with members of the family. Pensions are payable in cases of incapacity for work due to old age.

Pensions.—The amount of the pension is fixed by the regulations. Pensions are also granted to the widow and minor children of a deceased insured person.

Pension Fund.—The rates of contribution are fixed by regulations issued on the recommendation of the Ministry of National Economy.

Administration.—Insurance is carried by workers' insurance institutions under supervision of the Ministry of National Economy.

Iceland

Provision for old age insurance was made in Iceland in 1909. All persons between eighteen and sixty years of age are liable to contribute, with the exception of persons receiving poor-relief, disabled persons and those supporting needy relatives, convicts, and persons entitled to pensions amounting to at least 150 kronen ($40.20). Men contribute 1.50 kronen (.40c. annually and women .75 kronen (.20c.). The state adds to each .50 kronen (.13c.). In each commune, two-thirds of the contributions received by the old age relief funds, half of the state contributions and half of the interest accumulated is distributed among deserving necessitous persons. Relief is granted only for one year in each case and the amount must fall between 20 and 200 kronen ($5.36-$53.60).

Italy

Compulsory insurance against old age and invalidity was introduced in Italy by a decree of April 21, 1919. A number of disputes over the operation of the law culminated in a decision of the Court of Cassation which made it appear that as the decree of 1919 had not been ratified by the Chambers, it could not have the force of law. The Government then issued a Royal decree in December, 1923, replacing that of 1919. The system, however, remained practically unchanged.

Qualifications.—Pensions are payable at the age of sixty-five years provided that at least 240 fortnightly contributions have been paid. If permanent incapacity to work is proved, pensions are granted at any age provided 120 fortnightly contributions are paid. Insured persons between the ages of sixty and sixty-five years who have paid 240 fortnightly contributions may receive pensions at reduced rates while continuing to pay premiums toward the full pension which they will receive at sixty-five years of age.

Insurance is compulsory for all Italian subjects between the ages of sixty and sixty-five years, who work for an employer in any industry, trade or profession, in agriculture or the public services, or who are engaged in domestic service or in home industries. Aliens are subject to the law but do not receive the benefit of the state subsidy unless their country of origin grants reciprocal benefits to Italian citizens.

Salaried employees and persons of similar standing whose average salary exceeds 800 lire ($154.40), maritime workers during their period of service on Italian ships if they contribute to the Mercantile Marine Invalidity Fund, and public officials, are exempted from the operation of the law.

Voluntary insurance is provided for independent workers whose annual earnings do not exceed 500 lire ($96.50), for women engaged in domestic work and for persons who have ceased to be liable to compulsory insurance.

Pensions.—The state contributes 100 lire ($19.30) to each pension, which is made up of 66 per cent of the first 120 fortnightly contributions, 50 per cent of the next 120 and 25 per cent of the remaining contributions. When an insured male worker dies without receiving his pension, his widow or children under fifteen years of age are entitled to receive fifty lire ($9.65) per month for six months after his death. One-half of this amount is paid by the state.

Pension Fund.—An insured person and his employer contribute to the fund in equal proportions, the amount varying with the income of the insured. When the daily wage is two lire (39c.) or less the fortnightly contribution is fifty centesimi (.96c.); when the daily wage exceeds ten lire ($1.93), the premium is three lire (.58c.).
